

**KUMARAGURU COLLEGE OF TECHNOLOGY,**  
An autonomous Institution affiliated to Anna University, Chennai  
**COIMBATORE – 641 049.**

**B.E., MECHANICAL ENGINEERING**  
**REGULATIONS 2018**

**CURRICULUM AND SYLLABI**

**III to VIII Semesters**

**(2020 – 2024)**

**Department of Mechanical Engineering**

*C. Selvarajam*

Approved by BoS Chairman

## **VISION**

To emerge as a center that imparts quality higher education through its program in the domain of Mechanical Engineering to meet the changing needs of the society.

## **MISSION**

Bring about supremacy in curricular and co-curricular sustained activities with competent faculty through teaching and research, that generates technically capable mechanical engineering professionals to serve the society with delight and gratification.

## **PROGRAM EDUCATIONAL OBJECTIVES (PEOs)**

The Program Educational Objectives of Mechanical Engineering Undergraduate Program are to prepare the students:

**I.** Graduates will take up careers in manufacturing and design related sectors.

**II.** Graduates will be involved in the execution of mechanical engineering projects.

**III.** Graduates will take up educational programmes in mastering Mechanical Engineering Science and Management.

## **PROGRAM OUTCOMES (POs)**

Graduates of the Mechanical Engineering Undergraduate Program should have the ability to:

**PO 1:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

**PO 2:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

**PO 3:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

**PO 4:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

**PO 5:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

Approved by BoS Chairman

**PO 6:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

**PO 7:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

**PO 8:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

**PO 9:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

**PO 10:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

**PO 11:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

**PO 12:** Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### **PROGRAM SPECIFIC OUTCOMES (PSOs)**

Graduates of the Mechanical Engineering Undergraduate Program will have the ability to:

**PSO 1:** Apply the fundamentals of science and mathematics to solve complex problems in the field of design and thermal sciences.

**PSO 2:** Apply the concepts of production planning and industrial engineering techniques in the field of manufacturing engineering.

| <b>3</b> | <b>1</b> | <b>0</b> | <b>0</b> | <b>4</b> |

**(Common to AE/AUE/CE/ME/MCE/EEE)**

**Course Outcomes (COs):**

After successful completion of this course, the students should be able to:

- CO 1** Form partial differential equations and solve certain types of partial differential equations.
- CO 2** Determine the Fourier Series and half range Fourier Series of a function.
- CO 3** Solve one dimensional wave equation, one dimensional heat equation in steady state using Fourier series.
- CO 4** Apply Fourier series to solve the steady state two-dimensional heat equation in cartesian coordinates.
- CO 5** Identify Fourier transform, Fourier sine and cosine transform of certain functions and use Parseval's identity to evaluate integrals.
- CO 6** Evaluate Z-transform of sequences and inverse Z-transform of functions and solve difference equations.

**Pre-requisite: NIL**

**PARTIAL DIFFERENTIAL EQUATIONS****9+3 Hours**

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions  
- Solution of PDE by variable separable method – Solution of standard types of first order partial differential equations (excluding reducible to standard types) – Lagrange’s linear equation – Linear homogeneous partial differential equations of second and higher order with constant coefficients.

**FOURIER SERIES****9+3 Hours**

Dirichlet’s conditions – General Fourier series – Odd and Even functions – Half range sine series – Half range cosine series – Parseval’s identity – Harmonic Analysis.

**BOUNDARY VALUE PROBLEMS – ONE DIMENSIONAL EQUATIONS****5+2 Hours**

Classification of second order quasi linear partial differential equations –Solution of one-dimensional wave equation – One dimensional heat equation (excluding insulated ends), Fourier series solutions in Cartesian coordinates.

**BOUNDARY VALUE PROBLEMS – TWO DIMENSIONAL EQUATIONS****4+1 Hours**

Steady state solution of two-dimensional heat equation (Insulated edges excluded) – Fourier series solutions in Cartesian coordinates.

**FOURIER TRANSFORM****9+3 Hours**

Statement of Fourier integral theorem – Infinite Fourier transforms – Sine and Cosine Transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval’s identity.

**Z –TRANSFORM****9+3 Hours**

Z-transform - Elementary properties – Convolution theorem- Inverse Z – transform (by using partial fractions, residues and convolution theorem) – Solution of difference equations using Z - transform.

**Theory: 45****Tutorial: 15****Practical: 30****Project: 0****Total: 60 hours****References:**

**U18MEI3201 METAL CUTTING AND COMPUTERAIDED  
MANUFACTURING**

**L T P J C**  
**3 0 2 0 4**

**Course outcomes**

**After successful completion of the course, the student would be able to**

- CO 1** Apply the fundamentals of metal cutting and cutting tool materials
- CO 2** Study the types of machine tools and working principles of machine tools
- CO 3** Apply principles of surface integrity in finishing processes and study gear manufacturing techniques
- CO 4** Apply the manufacturing activities inter relation with computers for plant operations
- CO 5** Apply the concept of Group Technology in computer aided manufacturing
- CO 6** Apply system modeling tools in CIM and the fundamental concepts of data communications

**Pre-requisite: Nil**

**THEORY OF METAL CUTTING****9 Hours**

Introduction to Metal Cutting Methods – Mechanics of Metal Cutting – Orthogonal – Oblique – Merchants' Circle Diagram – Details of Derivation – Chip Details – Heat Generation – Cutting Tool Life – Cutting Tool Nomenclature – Economics of tool life – Optimal cutting speed for productivity - Cutting tool Materials - Cutting fluids – Recent Developments and Applications - Dry Machining and High-Speed Machining

**MACHINE TOOLS****8 Hours**

Introduction to Lathe – Shaper – Planing – Milling – Drilling – Boring – Grinding – Honing – Working Principles – Operations – Working Holding Devices.

**SURFACE FINISHING PROCESSES AND GEAR MANUFACTURING****8 Hours**

Grinding Machines – Grinding wheel Specifications – Honing – Lapping – Burnishing – Super Finishing – Surface Integrity concepts – Gear Manufacturing Processes – Gear cutting – Gear Hobbing – Gear Shaping Machines – Manufacture of Spur – Helical – Bevel – Worm and Worm Wheel – Gear Finishing, Honing.

**INTRODUCTION TO NUMERICAL CONTROL****7 Hours**

Introduction, programmed automation, Nomenclature, type and features of NC machine tools, Axes designation, point to point, straight and continuous control systems

**INTRODUCTION TO COMPUTER INTEGRATED MANUFACTURING****7 Hours**

The meaning and origin of CIM- the changing manufacturing and management scene - External communication - islands of automation and software-dedicated and open systems- product related activities of a company- marketing engineering - production planning - plant operations - physical distribution- business and financial management.

**GROUP TECHNOLOGY AND COMPUTER AIDED PROCESS PLANNING****7 Hours**

Role of Group Technology in CAD/CAM integration - part families - classification and coding – DCLASS, MICLASS and OPITZ coding systems-benefits of Group Technology Process planning - role of process planning in CAD/CAM integration - approaches to computer aided process planning -variant approach and generative approaches.

Approved by BoS Chairman

## **INTEGRATED LAB EXPERIMENTS:**

1. Spur Gear cutting using Milling machine
2. Dove tail machining using shaper machine
3. Cylindrical grinding and Surface grinding on given workpiece
4. Facing, plain and step turning and taper turning.
5. Single start V-Thread cutting and knurling.
6. Boring and internal thread cutting.
7. Manual part programming (using G and M codes) in CNC Lathe. Machining operations include turning, facing, taper turning, and step turning (any two operations).
8. Machining operations include Linear and Circular interpolation, chamfering and grooving (any two operations).
9. Manual part programming (using G and M codes) in CNC Milling. Machining operations include Linear and Circular interpolation (contour motions).

### **FRICTION**

**9 hours**

Laws of friction – coefficient of friction – Dry friction – wedge friction – ladder friction – rolling resistance.

### **KINEMATICS OF PARTICLES**

**3 hours**

Kinematics – Rectilinear and curvilinear motion – projectile motion

### **KINETICS OF PARTICLES**

**6 hours**

Kinetics – Newton’s law – D’Alembert’s Principle – Work Energy method – Principle of Impulse momentum - Impact

**Theory: 45**

**Tutorial: 0**

**Practical: 0**

**Project: 0**

**Total: 45 hours**

(Use of standard Steam table and Mollier diagram, Psychrometric Chart and Gas Tables are permitted)

### Course outcomes

After successful completion of the course, the student would be able to

- CO 1 Illustrate basic concepts for solving problems in open and closed system.  
 CO 2 Apply second law concepts to heat engine and heat pumps.  
 CO 3 Apply concepts of entropy  
 CO 4 Compare the performance of various vapor power cycles  
 CO 5 Illustrate the significance of thermodynamics relations  
 CO 6 Solve problems in various psychrometric processes

### BASIC CONCEPTS AND FIRST LAW

12 hours

Basic concepts - concept of continuum, macroscopic approach: thermodynamic systems - closed,

*C. Sefurungam*

Approved by BoS Chairman

open and isolated: Property, state, path and process, quasi-static process, work, modes of work, Zeroth law of thermodynamics – concept of temperature and heat. Concept of ideal and real gases. First law of thermodynamics – SFEE - Application to closed and open systems

## **SECOND LAW AND ENTROPY**

**12 hours**

Second law of thermodynamics – Kelvin’s and Clausius statements of second law, Heat Engines, Refrigerator and Heat Pump, Coefficient of Performance, Reversibility Carnot cycle - reversed Carnot cycle, efficiency, Carnot theorem, Thermodynamic temperature scale. Clausius theorem, Clausius inequality, concept of entropy, entropy of ideal gas, change of entropy for different non-flow processes, principle of increase of entropy – absolute entropy, Availability and irreversibility

## **STEAM AND VAPOUR CYCLES**

**10 hours**

Formation of steam at constant pressure, types of steam, steam tables and uses, external work done during evaporation, internal energy of Steam, dryness fraction of steam, entropy of steam – Mollier diagram steam power cycles, standard Rankine cycle, modified Rankine cycle. Reheat and regenerative cycle, Air standard otto cycle, Process making of the cycle, Cycle thermal efficiency, Compression expansion ratio and cycle efficiency, Deviation of real spark ignition engine from ideal cycle engines.

## **IDEAL AND REAL GASES AND THERMODYNAMIC RELATIONS**

**7 hours**

Properties ideal and real gases, equation state, Vander Wall’s equation of state, compressibility factor, compressibility chart- Dalton’s law of partial pressure, exact differentials, T-D relations, Maxwell’s relations, Clausius Clapeyron equations, Joule-Thomson coefficient.

## **PSYCHROMETRY**

**4 hours**

Avagadro’s Law, equation state, Gas mixtures, Dalton’s law, Psychrometry and psychrometric charts, property calculations of air vapor mixtures.

**Theory: 45  
hours**

**Tutorial: 0**

**Practical: 0**

**Project: 0**

**Total: 45**

**FUNDAMENTALS OF COMPUTER GRAPHICS****9 hours**

Product cycle- Design process- sequential and concurrent engineering- Computer aided design —CAD system architecture- Computer graphics — co-ordinate systems- 2D and 3D transformations-homogeneous coordinates - Line drawing -Clipping- viewing transformation

**GEOMETRIC MODELING****9 hours**

Representation of curves- Hermite curve- Bezier curve- B-spline curves-rational curves-

Approved by BoS Chairman

Techniques for surface modeling — surface patch- Coons and bicubic patches- Bezier and B-spline surfaces. Solid modeling techniques- CSG and B-rep

### **VISUAL REALISM**

**9 hours**

Hidden — Line-Surface-Solid removal algorithms — shading — colouring — computer animation.

### **ASSEMBLY OF PARTS**

**9 hours**

Assembly modelling — interferences of positions and orientation — tolerance analysis-massproperty calculations — mechanism simulation and interference checking.

### **CAD STANDARDS**

**9 hours**

Standards for computer graphics- Graphical Kernel System (GKS) - standards for exchange images-Open Graphics Library (OpenGL) - Data exchange standards - IGES, STEP, CALS etc. -communication standards.

**Course Outcomes (COs)**

**After successful completion of the course, the students should be able to**

- CO 1** Prepare drawings depicting interpenetration of simple solids and auxiliary views of machine parts
- CO 2** Develop 3D models of machine parts using various CAD software's
- CO 3** Develop 3D Assembly of machine components using CAD soft ware's
- CO 4** Prepare assembly drawings from detailed drawings of machine subassemblies.
- CO 5** Convert 3D models to 2D drawings using various CAD software's.
- CO 6** Able to convert actual physical measurement of component dimensions into 3D models.

**Pre-requisite:** Nil

### Course objectives

- To help the students look into the functioning of simple to complex devices and systems
- To enable the students to design and build simple systems on their own
- To help experiment with innovative ideas in design and team work
- To create an engaging and challenging environment in the engineering lab

### Course Outcomes

After successful completion of this course, the students should be able to:

**CO1:** Identify a practical problem and find a solution

**CO2:** Understand the project management techniques

**CO3:** Demonstrate their technical report writing and presentation skills

### Pre-requisite:

1. U18INI2600 ENGINEERING CLINIC - II

| CO/PO Mapping<br>(S/M/W indicates strength of correlation) S-Strong, M-Medium, W-Weak |                          |     |     |     |     |     |     |     |     |      |      |      |      |      |

| 3. Demonstration & Viva-voce 40% |                       |

### Content:

The course will offer the students with an opportunity to gain a basic understanding of computer controlled electronic devices and apply the concepts to design and build simple to complex devices. As a practical project based embedded course, the students will be taught the concepts using a variety of reference material available in the public domain. While the course will start with formal instruction on hardware, programming and applications, the major portion of the course will provide the students with ample opportunity to be innovative in designing and building a range of products from toys to robots and flying machines.

In the Third semester, students will focus primarily on Design project combining concepts learnt in Engineering clinics I and II.

  
 Approved by BoS Chairman

## **GUIDELINES:**

1. Practical based learning carrying credits.
2. Multi-disciplinary/ Multi-focus group of 5-6 students.
3. Groups can select to work on a specific task, or projects related to real world problems.
4. Each group has a faculty coordinator/Instructor who will guide/evaluate the overall group as well as individual students.
5. The students have to display their model in the 'Engineering Clinics Expo' at the end of semester.
6. The progress of the course is evaluated based on reviews and final demonstration of prototype.

**Total Hours: 90**

### Course Outcomes

After successful completion of this course, the students should be able to

**CO 1:** Develop skills in maintaining the harmony in the family.

**CO 2:** Create impulsive activities for healthy family

**CO 3:** Be receptive to troubled Individuals

**CO 4:** Gain healthy life by practicing Kundalini Yoga & Kayakalpa

**CO 5:** Possess Empathy among family members.

**CO 6:** Reason the life and its significance

### Pre-requisites:

1. U18VEP1501 / PERSONAL VALUES

2. U18VEP2502 / INTERPERSONAL VALUES

### Course Assessment methods

|   |
|---|
| <b>Direct</b>   |
| 1.Group Activity / Individual performance and assignment<br>2.Assessment on Value work sheet / Test |
| <b>Indirect</b>   |
| 1. Mini project on values / Goodwill Recognition  |

### Values through Practical activities:

  
Approved by BoS Chairman

1. **Family system:** Introduction to Family Values – elements of family values - Adjustment, Tolerance, Sacrifice - Family structure in different society – work life balance.
2. **Peace in Family:** Family members and their responsibility - Roles of parents, children, grand parents - Respectable women hood
3. **Core value: Empathy:** Unconditional love - Respect - Compassion - sacrifice–Care & share - helping – emotional support- hospitality – cleanliness
4. **Blessing:** Blessing - methods - Vibration effect - Benefits - Reason for misunderstanding in the Family and resolution through blessings.
5. **Healthy Family:** Good relationship with neighbors - Counseling - Simplified Kundalini Yoga - Kaya Kalpa Yoga

**COURSE OUTCOMES**

After successful completion of this course, the students will be able to

- CO1:** Apply various numerical techniques for solving non-linear equations and systems of linear equations.
- CO2:** Analyze and apply the knowledge of interpolation and determine the integration and differentiation of the functions by using the numerical data.
- CO3:** Predict the dynamic behavior of the system through solution of ordinary differential equations by using numerical methods.
- CO4:** Solve PDE models representing spatial and temporal variations in physical systems through numerical methods
- CO5:** Apply the concepts of probability to random variables
- CO6:** Construct probabilistic models for observed phenomena through distributions which play an important role in many engineering applications.

**Pre-requisite: NIL**

## **SOLUTION OF EQUATIONS AND EIGEN VALUE PROBLEMS**

**9+3 Hours**

Linear interpolation method – Iteration method – Newton’s method – Solution of linear system by Gaussian elimination and Gauss-Jordan methods - Iterative methods: Gauss Jacobi and Gauss - Seidel methods – Inverse of matrix by Gauss – Jordan method – Eigenvalues of a matrix by Power method.

## **INTERPOLATION, NUMERICAL DIFFERENTIATION AND INTEGRATION 9+3 Hours**

Lagrange’s and Newton’s divided difference interpolation – Newton’s forward and backward difference interpolation – Approximation of derivatives using interpolation polynomials – Numerical integration using Trapezoidal and Simpson’s rules.

## **NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS 9+3 Hours**

Single step methods: Taylor’s series method – Euler and Improved Euler methods for solving a first order equations – Fourth order Runge-Kutta method for solving first and second order equations – Multistep method: Milne’s predictor and corrector method.

## **BOUNDARY VALUE PROBLEMS IN PARTIAL DIFFERENTIAL EQUATIONS 9+3 Hours**

Finite difference techniques for the solution of two-dimensional Laplace’s and Poisson’s equations on rectangular domain–Solution of one-dimensional heat equation using Bender Schmidt and Crank Nicholson difference schemes –Solution of one dimensional wave equation by explicit scheme.

## **PROBABILITY AND RANDOM VARIABLES**

**9+3 Hours**

Axioms of probability - Conditional probability – Total probability – Bayes’ theorem – Random variable – Distribution function – properties – Probability mass function- Probability density function – moments - Binomial, Poisson and Normal distributions – Properties.

**Theory: 45 Hours**

**Tutorials: 15 Hours**

**Total: 60 Hours**

**Course Outcomes**

After successful completion of the course, the student would be able to

- CO 1** Apply fundamental concepts and compute simple stresses and deformations in structural members.
- CO 2** Construct shear force and bending moment diagrams for statically determinate beams and determine stress distribution.
- CO 3** Compute slope and deflection in statically determinate beams.
- CO 4** Examine the buckling failure in columns and calculate strain energy under varying load conditions.
- CO 5** Solve problems on shafts and springs subjected to twisting moment.
- CO 6** Apply the concepts of complex stress system in 2D systems and in thin walled containers.

**Pre-requisite:** U18MET3002- Engineering Mechanics

**SIMPLE STRESSES AND STRAINS****9 hours**

Stress and strain - Stress-strain diagrams - Factor of safety – Stresses and strains in stepped bars and uniformly varying sections – Stresses in composite bars due to axial loads and temperature - Relationships among elastic constants.

**SHEAR AND BENDING IN BEAMS****9 hours**

Shear force and bending moment diagrams for statically determinate beams. Theory of simple bending - Stress distribution along length and in beam section – Shear stresses in beams.

**DEFLECTION OF BEAMS****7 hours**

Slope and deflection in determinate beams - Double integration method, Macaulay's method, Moment area method.

**BUCKLING OF COLUMNS AND STRAIN ENERGY****6 hours**

Columns – End conditions – Euler's formula – Rankine's formula. Strain energy under gradual, sudden and impact loading

**TORSION****7 hours**

Torsion of circular and hollow shafts - Elastic theory of torsion - Stresses and deflection in solid and hollow shafts - stepped shaft - Shafts in series and parallel. Springs - closed and open coiled helical springs.

**COMPLEX STRESSES****7 hours**

State of stress at a point - Normal and Shear stresses on any plane - Principal stresses and strains in two dimension – Analytical method, Mohr's circle method. Hoop and longitudinal stresses in thin cylinders and shells.

**INTEGRATED LAB EXPERIMENTS**

1. Tension test on a mild steel rod
2. Shear test on a mild steel rod
3. Torsion test on mild steel rod
4. Hardness test on metals - Brinell and Rockwell Hardness
5. Deflection test on beams
6. Compression test on helical springs
7. Tensile test on helical springs
8. Impact Test

**Course outcomes**

After successful completion of the course, the student would be able to

- CO 1** State and explain various fluid properties.
- CO 2** Apply the knowledge of fluid statics for solving the problems in buoyancy and manometers.
- CO 3** Solve problems in mass, momentum and energy balance equations in fluid dynamics.
- CO 4** Determine the flow rate through Venturi-meter and orifice meter.
- CO 5** Analyze the performance of turbines and pumps.
- CO 6** Illustrate the various tools for solving fluid dynamic problems.

## **FLUID PROPERTIES, STATICS AND KINEMATICS**

**10 Hours**

Fluid Properties: Importance & applications of fluid mechanics. Solid vs Fluid - Units and Dimensions – Properties of fluids (Definition only)-Mass density – Specific weight – Specific volume – Specific gravity – Viscosity – Compressibility – Surface tension – Capillarity – Vapor pressure.

Fluid Statics: Hydrostatic equation – Forces on plane and curved surfaces- Buoyancy – Metacentre – Simple and differential manometers. Fluid Kinematics: Path line – Stream line – Streak line – Stream and Potential functions – Flownets.

## **FLUID DYNAMICS**

**10 Hours**

Fluid Element and properties - Lagrangian vs Eulerian description – Governing equations: Mass balance (Continuity equation) – Newton's second law (momentum equation- statement only) – First law of thermodynamics (Energy equation-statement only). Non-viscous flows (Euler's equation) – Frictionless flows (Bernoulli's equation), Introduction to CFD.

**Case study (not for exam):** Demonstration of solving Euler's and Navier-Stokes equation using analysis tools like ANSYS, HyperWorks etc.

## **FLUID FLOW AND DIMENSIONAL ANALYSIS**

**10 Hours**

Laminar and turbulent flows through pipe – Hagen-Poiseuille equation – Darcy-Weishbach equation – Major and Minor losses.

Dimensional Analysis- Buckingham's  $\pi$  theorem- Discharge and velocity measurements- venture meter and pitot tube.

## **HYDRAULIC TURBINES**

**8 Hours**

Force exerted on moving plate/ vanes- Definition and classifications- Pelton, Francis, Propeller and Kaplan turbine: Working principles- Velocity triangle – Work done – specific speed – efficiencies – Performance curve for turbines.

## **HYDRAULIC PUMPS**

**7 Hours**

Definition and classifications- Centrifugal and Reciprocating Pumps: Working principles- Indicator diagram – Specific speed – efficiency and performance curves - Cavitation in pumps.

## **INTEGRATED LAB EXPERIMENTS**

1. Determination of the Coefficient of discharge of a given Orifice meter.
2. Determination of the Coefficient of discharge of a given Venturi meter.
3. Characteristic curves of centrifugal / reciprocating pump.
4. Performance characteristics of Pelton wheel.
5. Performance characteristics of Francis turbine.

**Theory: 45**

**Tutorial: 0**

**Practical: 30**

**Project: 0**

**Total: 75 Hours**

**After successful completion of the course, the student would be able to**

**CO 1:** Apply the fundamental concepts in developing various mechanisms

**CO 2:** Analyze velocity and acceleration in planar mechanisms

**CO 3:** Synthesize simple mechanisms such as 4-bar and slider crank mechanisms

**CO 4:** Construct the cam profile for specific follower motion.

**CO 5:** Determine appropriate gears for requirements.

**CO 6:** Compute the parameters in gear trains and determine the speeds in gear boxes.

**Pre-requisite:** U18MET3002 Engineering Mechanics

## **BASICS OF MECHANISMS**

**6 Hours**

Terminology and Definitions- Degree of freedom, mobility-Kutzbach criterion- Grashoff's law- Gruebler's criterion - Mechanical Advantage -Transmission angle – Coupler curves - Kinematic Inversions of 4- bar chain and slider crank chains - Description of common mechanisms -- Ratchets and pawl mechanisms- Indexing mechanisms - Rocking mechanisms - Straight line generators – Steering mechanisms

*C. Sefurman*

Approved by BoS Chairman

**KINEMATICS OF PLANE MECHANISMS****11 Hours**

General plane motion - Relative velocity method – Displacement, velocity and acceleration analysis in simple mechanisms - Instantaneous center method, Kennedy theorem – Coincident points – Coriolis component of acceleration - Analytical method of kinematic analysis.

**SYNTHESIS OF MECHANISMS****7 Hours**

Mechanism synthesis – Motion generation, path generation and function generation – Chebyshev’s spacing of accuracy points – Graphical and algebraic methods of synthesis of simple mechanisms such as 4 bar and slider crank mechanisms.

**KINEMATICS OF CAM****8 Hours**

Classifications - Displacement diagrams - Uniform velocity, simple harmonic, uniform acceleration and retardation and cycloidal motions – Graphical layout of plate cam profiles – Derivatives of follower motion – High speed cams – Cams with specified contours - unbalance and wind up - Pressure angle and undercutting – spring surge, jump speed - Analysis of cam.

**GEARS****6 Hours**

Introduction – Types – Terminology – Law of toothed gearing – Velocity of sliding – Involute and cycloidal tooth profiles – Interchangeable gears – Length of path and arc of contact – contact ratio – Interference and under cutting – Minimum number of teeth to avoid interference in pinion and gear – Nonstandard gear teeth.

**GEAR TRAINS AND GEAR BOXES****7 Hours**

Gear trains – Simple, compound, reverted and epicyclic gear trains – Differentials.

Multi speed gear boxes – Speed ratio - Kinematic arrangement – Ray diagram.

**Total:45 hours****REFERENCES:**

**Course Content****OBJECTIVES**

At the end of this course the student is expected to understand what constitutes the environment, what are precious resources in the environment, how to conserve these resources, what is the role of a human being in maintaining a clean environment and useful environment for the future generations and how to maintain ecological balance and preserve bio-diversity.

Approved by BoS Chairman

## **INTRODUCTION TO ENVIRONMENTAL STUDIES AND NATURAL RESOURCES**

**14 Hours**

Definition, scope and importance – Need for public awareness – Forest resources: Use and overexploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people

Water resources: Use and overutilization of surface and ground water, conflicts over water, dams benefits and problems - Water conservation, rain water harvesting, watershed management Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, case studies

Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies

Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification, Wasteland reclamation – Role of an individual in conservation of natural resources

## **ECOSYSTEMS AND BIODIVERSITY**

**9 Hours**

**ECOSYSTEM:** Concept of an ecosystem – Structure and function of an ecosystem: Producers, consumers and decomposers, Food chain, Food web, Energy flow in the ecosystem and Ecological pyramids - Ecological succession – Introduction, types, characteristic features, structure and function of the (a) Forest ecosystem (b) Grassland ecosystem (c) Desert ecosystem

(d) Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

**BIODIVERSITY :** Introduction to Biodiversity – Definition: genetic, species and ecosystem diversity – Biogeographical classification of India – Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic values – India as a mega-diversity nation – Hot-spots of biodiversity – Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – Endangered and endemic species of India – Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

## **ENVIRONMENTAL POLLUTION**

**10 Hours**

Definition – Causes, effects and control measures of: (a) Air pollution - Organic and inorganic pollution - cyclone separator, electrostatic precipitator(b) Water pollution (c) Heavy metal pollution (d) Noise pollution (e) Thermal pollution (f) Nuclear hazards - Role of an individual in prevention of pollution – Pollution case studies – Solid waste and hazardous Management: Causes, effects and control measures from factories, small scale and large scale industries - waste minimization – Disaster management: floods, earthquake, cyclone and landslides.

## **SOCIAL ISSUES AND THE ENVIRONMENT**

**7 Hours**

From Unsustainable to Sustainable development – Urban problems related to energy – Resettlement and rehabilitation of people; its problems and concerns, case studies – Issues and possible solutions – Climate change, global warming, acid rain, ozone layer depletion – Environment Protection Act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife Protection Act – Forest Conservation Act – Issues involved in enforcement of environmental legislation – Human Rights

## **HUMAN POPULATION AND THE ENVIRONMENT**

**5 Hours**

Population growth and explosion – Welfare Programme- Environment and human health

*C. Sefurman*

Approved by BoS Chairman

– Communicable disease – Role of Information Technology in Environment and human health – Case studies.

**COURSE OUTCOMES:**

After successful completion of this course, the students would be able to

- CO1 Describe the construction, principle of operation and characteristics of DC motors
- CO2 Distinguish the construction and operation various types of induction motors
- CO3 Familiarize the speed control techniques for DC motor and induction motor
- CO4 Describe the construction and operation of special electrical machines
- CO5 Choose the suitable motor for specific application

**THEORETICAL COMPONENT CONTENTS:**

**DC MACHINES**

**9 Hours**

Introduction to Magnetic Circuits - Construction of DC machines- Principle, operation and Torque equation of DC motor- Types of DC motors- DC Shunt Motor and series motors- Characteristics and Applications

**TRANSFORMERS AND AC MACHINES**

**9 Hours**

  
 Approved by BoS Chairman

Principle of transformers- Three phase induction motors- Principle of operation - Construction- Types- Single phase Induction motors- - Starting methods- Types -Applications.

### **SPEED CONTROL OF DC MOTORS**

**9 Hours**

Basic components of Electrical Drives -Factors influencing the choice of electrical drives-Speed control of DC Shunt Motors- Armature control - Field control - Single phase fully controlled converter fed DC motor- Four quadrant chopper fed DC motor- Applications

### **SPEED CONTROL OF INDUCTION MOTOR**

**9 Hours**

Speed control of three phase induction motor- Stator voltage control using SCR based voltage controller- Rotor resistance control-Constant V/F ratio control using VSI- Applications

### **SPECIAL ELECTRICAL MACHINES**

**9 Hours**

Construction and operation: PMDC motor, Variable reluctance stepper motor, BLDC motor, AC Servo motor and Permanent magnet synchronous motor- Applications

### **TEXTBOOKS:**

1. V. K. Mehta and Rohit Mehta, "Principles of Electrical Machines", S. Chand & Co Ltd, 2006.

### **List of Experiments:**

1. Load test on DC shunt motor
2. Load test on DC series motor
3. Speed control of DC shunt motor
4. Load test on single phase induction motor
5. Speed control of fully controlled converter fed DC motor
6. Speed control of three phase induction motor using V/f control
7. Speed control of BLDC motor
8. Speed control of Stepper motor
9. Study of Transformer
10. Study of four quadrant DC drive

### Course objectives

- To help the students look into the functioning of simple to complex devices and systems
- To enable the students to design and build simple systems on their own
- To help experiment with innovative ideas in design and team work
- To create an engaging and challenging environment in the engineering lab

### Course Outcomes

After successful completion of this course, the students should be able to:

**CO1:** Identify a practical problems and find a solution

**CO2:** Understand the project management techniques

**CO3:** Demonstrate their technical report writing and presentation skills

### Pre-requisite:

1. U18INI3600 Engineering Clinic III

### Content:

The course will offer the students with an opportunity to gain a basic understanding of computer controlled electronic devices and apply the concepts to design and build simple to complex devices. As a practical project based embedded course, the students will be taught the concepts using a variety of reference material available in the public domain. While the course will start with formal instruction on hardware, programming and applications, the major portion of the course will provide the students with ample opportunity to be innovative in designing and building a range of products from toys to robots and flying machines.

In the fourth semester, students will focus primarily on Reverse engineering project to improve performance of a product

  
 Approved by BoS Chairman

## **GUIDELINES:**

1. Practical based learning carrying credits.
2. Multi-disciplinary/ Multi-focus group of 5-6 students.
3. Groups can select to work on a specific tasks, or projects related to real world problems.
4. Each group has a faculty coordinator/Instructor who will guide/evaluate the overall group as well as individual students.
5. The students have to display their model in the 'Engineering Clinics Expo' at the end of semester.
6. The progress of the course is evaluated based on reviews and final demonstration of prototype.

**Course Outcomes**

After successful completion of this course, the students should be able to

- CO 1:** Develop the ethical values in both professional and personal life
- CO 2:** Develop ability to take decision to reinforce professional life
- CO 3:** Rational in professional skills required for diverse society
- CO 4:** Excel in ingenious attitude to congregate professional life
- CO 5:** Research into the professional stand
- CO 6:** Spruce an Individual with decorum to achieve professional life

**Pre-requisites:**

1. U18VEP1501 / PERSONAL VALUES
2. U18VEP2502 / INTERPERSONAL VALUES
3. U18VEP3503 / FAMILY VALUES

Students are expected to undergo 4 weeks of Industrial internship during their summer vacation. At the end of the internship, they are expected to submit report similar to the Project report, which will be evaluated by the panel composed of members nominated by the Head of the Department with the approval of CoE. In case a student score Letter “RA” grade in Internship course then he/she must repeat the internship.

(Use of standard thermodynamic tables, Mollier diagram, Psychometric chart and Refrigerant property tables are permitted in the examination)

### Course outcomes

After successful completion of the course, the students should be able to

**CO 1:** Explain the working principle and combustion characteristics of IC Engines.

**CO 2:** Calculate the performance parameters of Gas power cycles, IC Engines and estimate the fuel properties

**CO 3:** Explain the performance characteristics of steam nozzles.

**CO 4:** Discuss the importance of velocity diagrams and compounding in Turbines

**CO 5:** Calculate the various efficiencies of the air compressors.

**CO 6:** Explain the working principle of VCR & VAR systems.

**Pre-requisite:** 1. U18MET3004- Engineering Thermodynamics

### INTERNAL COMBUSTION ENGINES

9 Hours

Engine components and functions - timing diagram. Fuel supply systems- CRDI, MPFI, Ignition Systems - Combustion phenomenon – Knocking and Detonation – Octane, Cetane numbers- Air-fuel

*C. Sefurungam*

Approved by BoS Chairman

ratio calculation, Lubrication system and cooling system.

### **GAS POWER CYCLES & ENGINE PERFORMANCE**

**9 Hours**

Otto, Diesel, Dual, Brayton cycles (Air standard efficiency derivation only), Calculation of mean effective pressure and air standard efficiency, Actual and theoretical PV diagram of Four stroke engines, Actual and theoretical PV diagram of two stroke engines. Exhaust gas analysis - Recent trends in pollution control norms

### **STEAM NOZZLES AND TURBINES**

**9 Hours**

Flow of steam through nozzles, shapes of nozzles, effect of friction – Nozzle efficiency- General relationship between area, velocity and pressure in nozzle flow. Critical pressure ratio - Impulse and reaction principles, compounding, and velocity diagrams for simple turbines, speed regulations – governors. Reheating the steam- Bleeding.

### **AIR COMPRESSOR**

**9 Hours**

Classification - Reciprocating Air Compressor - working principle, work of compression with and without clearance. Multistage air compressor and inter cooling (Descriptive treatment only), Rotary Compressors – Centrifugal Compressor and axial flow compressor (Descriptive treatment only), Screw Compressors.

### **REFRIGERATION AND AIR CONDITIONING**

**9 Hours**

Fundamentals of refrigeration and air conditioning - Vapour compression refrigeration cycle- super heat, sub cooling- Performance calculations- working principle of vapour absorption system, Ammonia- Water, Lithium boride- water systems (Description only) – Alternate refrigerants- Air conditioning systems: types, working principles- Psychrometry - Cooling Load calculations – Concept of RSHF, GSHF, ESHF.

### **LIST OF EXPERIMENTS:**

1. Valve Timing and Port Timing Diagrams.
2. Performance Test on Multi Cylinder Diesel Engine by Hydraulic loading.
3. Heat Balance Test on Diesel Engine by Electrical loading.
4. Morse Test on Multi cylinder Petrol Engine.
5. Performance and emission Test on single cylinder petrol engine.
6. Determination of Frictional Power by retardation test.
7. Determination of Viscosity of given oil.
8. Determination of Flash Point and Fire Point.
9. Performance test on reciprocating air compressor.
10. Study on CRDI and MPFI engines.
11. Study of data acquisition system for engine experiments.

**Theory: 45**

**Tutorial: 0**

**Practical: 30**

**Project: 0**

**Total: 75 Hours**

**LINEAR AND ANGULAR MEASUREMENTS**

**9 hours**

Length Standards - Length Measuring instruments - Vernier instruments - micrometer, height gauge, dial indicators, Bore gauges, Slip gauges, Comparators - Mechanical, Electrical, Optical and Pneumatic, Optical Projector. Angle measuring instruments - Bevel protractor, Spirit level, Sine bar, Autocollimator, Angle Decker.

*C. Sefurungun*  
Approved by BoS Chairman

**FORM MEASUREMENT****9 hours**

Screw thread terminology- Measurement of effective diameter by two wire and three wire methods - errors in threads- Measurement of pitch, profile errors and total composite errors, Gear tooth terminology-Methods of measurements of run out, pitch, profile, lead, backlash, tooth thickness-composite method of inspection - Parkinson gear tester - Measurement of surface finish - Stylus probe instruments - Tomlinson and Talysurf instrument-Straightness, Flatness and Roundness measurement.

**ADVANCES IN METROLOGY****9 hours**

Precision instruments based on Laser- laser interferometer – Universal Measuring Machine- Tool maker's microscope - Coordinate Measuring Machine (CMM): need, construction, types, applications- Computer Aided Inspection, Machine Vision - Introduction to Nanometrology

**PROCESS CONTROL FOR VARIABLES AND ATTRIBUTES****9 hours**

Definition and concept of quality - significance of SQC - benefits and limitations of SQC - Quality assurance - Quality cost - Process capability – process capability studies – Construction and uses of control chart – Control chart for variables – X bar chart, R- chart, S-chart- Control chart for attributes – c- chart, u- chart, p- charts.

**ACCEPTANCE SAMPLING****9 hours**

Lot by lot sampling - probability of acceptance in single, double, multiple sampling techniques – OC curves – producers' risk and consumers risk. AQL, LTPD, AOQL concepts-standard sampling plans for AQL and LTPD.

**LIST OF EXPERIMENTS:**

1. Study of linear measuring instruments.
2. Linear Measurement using Vernier height gauge and slip gauge.
3. Angular measurement using sine bar and bevel protector.
4. Measurements of gear tooth dimensions using gear tooth Vernier and error of composite gear tooth using gear roll tester.
5. Measurement of screw thread parameters using Tool Makers Microscope and Profile Projector.
6. Measurement of surface roughness of machined components.
7. A study of co-ordinate measuring machine.
8. Process capability study

**Theory: 45 hours****Practicals: 15 hours****Total: 60 hours**

**STEADY STRESSES IN MACHINE MEMBERS****7 hours**

Introduction to the design process – Product development cycle- factors influencing machine design, selection of materials based on mechanical properties - Preferred numbers – Direct, Bending and Torsional stress – Impact and shock loading, eccentric loading – Design of curved beams - Theories of failure

**STRESS CONCENTRATION AND VARIABLE STRESSES IN MACHINE MEMBERS****5 hours**

Stress concentration – Design for variable loading – Soderberg, Goodman and Gerber relations

Approved by BoS Chairman

**DESIGN OF SHAFTS AND COUPLINGS****9 hours**

Design of shafts based on strength, rigidity and critical speed – Design of keys, keyways and splines - Design of rigid and flexible couplings

**DESIGN OF BEARINGS****8 hours**

Sliding contact and rolling contact bearings – Design of hydrodynamics journal bearings – selection of rolling contact bearings.

**DESIGN OF TEMPORARY AND PERMANENT JOINTS****9 hours**

Threaded fasteners - Design of bolted joints including eccentric loading, Knuckle joints, Cotter joints – Design of welded joints - Design of riveted joints.

**DESIGN OF ENERGY STORING ELEMENTS****7 hours**

Design of various types of springs, helical springs, leaf springs - Design of flywheels considering stresses in rims and arms

**Theory : 45 hours****Total: 45 hours****REFERENCES:**

**COURSE OUTCOMES:**

On completion of this course, students will be able to

**CO1:** Apply the principles of turbo machines

**CO2:** Design and estimate different parameters for centrifugal fans.

**CO3:** Design and analyze flow parameters in blowers

**CO4:** Solve problems on centrifugal compressors

**CO5:** Design simple stage problems in axial flow compressors

**CO6:** Calculate and analyze flow parameters in radial flow gas turbines

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Analyze the static and dynamic force in mechanical systems. Evaluate the fluctuation of energy stored in flywheel.

**CO 2:** Determine the unbalanced force in reciprocating and rotating mass

**CO 3:** Apply the fundamental concepts of vibrating system to predict the natural frequency.

**CO 4:** Estimate the frequency of damped and forced vibrating systems

**CO 5:** Calculate the speed range of governors.

**CO 6:** Determine the gyroscopic couple.

**Pre-requisite:**1. U18MET5004 Kinematics of Machinery

**FORCE ANALYSIS AND FLYWHEELS****10 Hours**

Static force analysis of mechanisms - Inertia force and Inertia torque – Dynamic force analysis - Dynamic Analysis in Reciprocating Engines – Gas Forces - Equivalent masses - Crank shaft torque. Turning moment diagrams – Fluctuation of energy, speed - Flywheels of engines and punching press

**BALANCING****8 Hours**

Static and dynamic balancing – Balancing of rotating masses - Balancing of reciprocating masses in a single cylinder engine - Balancing in multi-cylinder engines – Firing order.

Approved by BoS Chairman

**FREE VIBRATION****9 Hours**

Basic features of vibratory systems - Basic elements and lumping of parameters - Degrees of freedom - Single degree of freedom - Free vibration - Equations of motion - Natural frequency - Whirling of shafts and critical speed - Torsional vibration of two and three rotor systems.

**DAMPED AND FORCED VIBRATIONS****8 Hours**

Damped vibration - Types of damping - Response to periodic forcing - Harmonic Forcing – Forced vibration caused by unbalance – Force transmissibility and amplitude transmissibility - Vibration isolation.

**GOVERNORS****5 Hours**

Governors - Types - Centrifugal governors – Porter, Proell and Hartnell governors – Controlling force - Characteristics.

**GYROSCOPES****5 Hours**

Gyroscopes - Gyroscopic couple - Gyroscopic stabilization - Gyroscopic effects in aeroplanes, ships and automobiles.

**INTEGRATED LABORATORY EXPERIMENTS**

1. Characteristic curves of Porter and Hartnell governors
2. Motorized gyroscope
3. Damped vibration
4. Balancing of reciprocating masses
5. Balancing of rotating masses
6. (a) Longitudinal vibration in helical spring (b) Verification of Dunkerley's rule
7. (a) Single rotor system (b) Vibrating table
8. Critical speed of whirling of shaft
9. Compound Pendulum

### Course objectives

- To help the students look into the functioning of simple to complex devices and systems
- To enable the students to design and build simple systems on their own
- To help experiment with innovative ideas in design and team work
- To create an engaging and challenging environment in the engineering lab

### Course Outcomes

After successful completion of this course, the students should be able to:

**CO1:** Identify a practical problems and find a solution

**CO2:** Understand the project management techniques

**CO3:** Demonstrate their technical report writing and presentation skills

### Pre-requisite:

1. U18INI4600 Engineering Clinic IV

### Content:

The course will offer the students with an opportunity to gain a basic understanding of computer controlled electronic devices and apply the concepts to design and build simple to complex devices. As a practical project based embedded course, the students will be taught the concepts using a variety of reference material available in the public domain. While the course will start with formal instruction on hardware, programming and applications, the major portion of the course will provide the students with ample opportunity to be innovative in designing and building a range of products from toys to robots and flying machines.

In the fifth semester, students will focus primarily on Design and developing a prototype

  
 Approved by BoS Chairman

## **GUIDELINES:**

1. Practical based learning carrying credits.
2. Multi-disciplinary/ Multi-focus group of 5-6 students.
3. Groups can select to work on a specific tasks, or projects related to real world problems.
4. Each group has a faculty coordinator/Instructor who will guide/evaluate the overall group as well as individual students.
5. The students have to display their model in the 'Engineering Clinics Expo' at the end of semester.
6. The progress of the course is evaluated based on reviews and final demonstration of prototype.

**Total Hours: 90**

Approved by BoS Chairman

# VI Semester

**CONDUCTION****9 hours**

Basic Concepts – Mechanism of Heat Transfer – Conduction, Convection and Radiation – Fourier Law of Conduction - General Differential Conduction equation in Cartesian and Cylindrical Coordinate systems – One Dimensional Steady State Heat Conduction through Plane Wall, Cylindrical and Spherical systems – Composite Systems – Critical thickness of insulation - Conduction with Internal Heat Generation – Extended Surfaces – Numerical

Approved by BoS Chairman

Methods of One dimensional Heat conduction- Unsteady Heat Conduction – Lumped Analysis, Infinite and semi Infinite solids using Heislers Chart.

## **CONVECTION**

**9 hours**

Basic Concepts – Convective Heat Transfer Coefficients – Boundary Layer Concept – Types of Convection – Forced Convection – Dimensional Analysis – External Flow – Flow over Plates, Cylinders and Spheres – Internal Flow – Laminar, Turbulent and Combined flows – Flow over Bank of tubes – Free Convection – Dimensional Analysis – Flow over Vertical, Horizontal and Inclined Plates, Cylinders and Spheres.

## **HEAT EXCHANGERS**

**9 hours**

Nusselts theory of condensation - Regimes in boiling - Correlations in condensation and boiling - Types of Heat Exchangers- compact heat exchanger – Overall Heat Transfer Coefficient – Fouling Factors - LMTD and Effectiveness – NTU methods of Heat Exchanger Analysis.

## **RADIATION**

**9 hours**

Basic Concepts, Laws of Radiation – Black Body Radiation – Grey body radiation –radiation shield - Shape Factor Algebra (Plates, parallel, perpendicular, parallel circular disc) – Gas radiations (qualitative study).

## **MASS TRANSFER**

**9 hours**

Basic Concepts – Diffusion Mass Transfer – Fick’s Law of Diffusion – Steady state Molecular Diffusion – Convective Mass Transfer – Momentum, Heat and Mass Transfer Analogy – Convective Mass Transfer Correlations.

**Theory: 45 hours**

**Total: 45 hours**

### **LIST OF EXPERIMENTS:**

1. Thermal conductivity measurement using a two-slab guarded hot plate apparatus
2. Thermal conductivity measurement of an insulation using lagged pipe apparatus.
3. Determination of convective heat transfer coefficient and rate of Heat transfer - free and forced convection.
4. Determination of rate of Heat transfer from pin-fin - natural and forced convection mode.
5. Estimation of effectiveness of tube – in – tube parallel flow and counter flow heat exchanger mode by using LMDT and NTU method.
6. Determination of emissivity and radiation factor for the given test specimen using Stefan-Boltzman emissivity apparatus.
7. Determination of COP of the given VCR test rig.
8. Determination of COP of the given air conditioning test rig.

**Theory: 45 hours****Practical: 30 hours****Total: 75 Hours**

Approved by BoS Chairman

**Course Outcomes**

After successful completion of this course, the students should be able to:

**CO1:** Apply linear programming model and assignment model to domain specific situations

**CO2:** Analyze the various methods under transportation model and apply the model for testing the closeness of their results to optimal results

**CO3:** Apply the concepts of PERT and CPM for decision making and optimally managing projects

**CO4:** Analyze the various replacement and sequencing models and apply them for arriving at optimal decisions

**CO5:** Analyze and apply appropriate inventory techniques in domain specific situations.

**CO6:** Analyze and apply appropriate queuing theories in domain specific situations

**Pre-requisite:** Nil

**LINEAR MODEL**  
hours

9

The phases of OR study – formation of an L.P model – graphical solution – simplex algorithm – artificial variables technique (Big M method, two phase method), duality in simplex

*C. Sefurman*  
Approved by BoS Chairman

## **TRANSPORTATION AND ASSIGNMENT PROBLEM**

**9**

### **hours**

Transportation model – Initial solution by North West corner method – least Cost method – VAM. Optimality test – MODI method and steppingstone method. Assignment model – formulation – balanced and unbalanced assignment problems

## **PROJECT MANAGEMENT BY PERT & CPM**

**9 hours**

Basic terminologies – Constructing a project network – Scheduling computations – PERT - CPM – Resource smoothening, Resource leveling, PERT Cost

## **REPLACEMENT AND SEQUENCING MODELS**

**9 hours**

Replacement policies - Replacement of items that deteriorate with time (value of money not changing with time) – Replacement of items that deteriorate with time (Value of money changing with time) – Replacement of items that fail suddenly (individual and group replacement policies).

Sequencing models- n job on 2 machines – n jobs on 3 machines – n jobs on m machines, Traveling salesman problem

## **INVENTORY AND QUEUING THEORY**

**9 hours**

Variables in inventory problems, EOQ, deterministic inventory models, order quantity with price break, techniques in inventory management.

Queuing system and its structure – Kendall’s notation – Common queuing models - M/M/1: FCFS/ $\infty/\infty$  - M/M/1: FCFS/n/ $\infty$  - M/M/C: FCFS/ $\infty/\infty$  - M/M/1: FCFS/n/m

**Theory: 45 hours**

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Solve problems by applying standard finite element techniques.

**CO 2:** Analyze 1-D finite elements and to build the stiffness matrix.

**CO 3:** Examine 2-D finite element continuum for structural applications.

**CO 4:** Solve 1-D and 2-D heat transfer problems using finite element approach.

**CO 5:** Apply axisymmetric formulation for specific applications.

**CO 6:** Make use of finite element principles in iso-parametric applications.

**Pre-requisite:** Nil

**INTRODUCTION****9 Hours**

Historical background – Matrix approach – Application to the continuum – Discretisation – Matrix algebra – Gaussian elimination – Governing equations for continuum – Classical Techniques in FEM – Weighted residual method – Rayleigh Ritz method

**ONE DIMENSIONAL PROBLEMS****9 Hours**

Finite element modeling – Coordinates and shape functions- Potential energy approach – Galarkin approach – Assembly of stiffness matrix and load vector – Finite element equations – Quadratic shape functions – Applications to plane trusses- One dimensional steady state conduction and convective heat transfer problems.

Approved by BoS Chairman

## **TWO-DIMENSIONAL CONTINUUM**

**9 Hours**

Introduction – Finite element modeling – Scalar valued problem – Poisson’s equation – Laplace equation – Triangular elements – Element stiffness matrix – Force vector – Galarkin approach - Stress calculation.

## **AXISYMMETRIC CONTINUUM**

**9 Hours**

Axisymmetric formulation – Element stiffness matrix and force vector – Galarkin approach – Body forces – Stress calculations – Boundary conditions.

## **ISOPARAMETRIC ELEMENTS FOR TWO-DIMENSIONAL CONTINUUM 9 Hours**

The four-node quadrilateral – Shape functions – Element stiffness matrix and force vector – Numerical integration – Stiffness– Stress calculations – Four node quadrilateral for axisymmetric problems.

**Theory : 45 Hours**

**Practical : 30 Hours**

**Total : 75 Hours**

### **Practical:**

1. Stress analysis of a plate with a circular hole.
2. Stress analysis of rectangular L bracket
3. Stress analysis of an axi-symmetric component
4. Stress analysis of beams (Cantilever, Simply supported, Fixed ends)
5. Mode frequency analysis of a 2 D component
6. Mode frequency analysis of beams (Cantilever, Simply supported, Fixed ends)
7. Harmonic analysis of a 2D component
8. Thermal stress analysis of a 2D component
9. Conductive heat transfer analysis of a 2D component
10. Convective heat transfer analysis of a 2D component

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Choose suitable flexible drive for specific application.

**CO 2:** Design spur and helical gear by considering strength and life.

**CO 3:** Estimate the dimensions of bevel and worm gears

**CO 4:** Construct the gear box for suitable application.

**CO 5:** Design braking system for various applications.

**CO 6:** Apply the concepts of pressure and wear theories to design clutches.

**Pre-requisite:** U18MET5003 – Design of Machine Elements

**DESIGN OF FLEXIBLE ELEMENTS****8****Hours**

Dynamic aspects of belt drives – ratio of driving tensions - Maximum power transmitted by a belt drive. Selection of Flat belts and V belts – pulleys -Wire ropes and pulleys – Selection of Transmission chains and Sprockets. Design of pulleys and sprockets.

**SPUR GEARS AND HELICAL GEARS****8****Hours**

Force analysis -Tooth stresses - Dynamic effects - Fatigue strength - Gear materials – Module and Face width-power rating calculations based on strength and wear considerations - Helical Gears – Pressure angle in the normal and transverse plane- Equivalent number of teeth-forces and stresses. Estimating the size of the spur and helical gears.

**BEVEL AND WORM GEARS****8****Hours**

Straight bevel gear: Tooth terminology, tooth forces and stresses, equivalent number of teeth. Estimating the dimensions of pair of straight bevel gears. Worm Gear: terminology, Merits and demerits. Thermal capacity, materials-forces and stresses, efficiency, estimating the size of the worm gear pair.

**DESIGN OF GEAR BOXES****6****Hours**

Geometric progression - Standard step ratio - Design of sliding mesh gear box - Constant mesh gear box. – Design of multi speed gear box- Industrial Case studies in Gear Box Design

**DESIGN OF BRAKES****8****Hours**

Dynamic aspects of braking – Braking Torque in block, band and internal expanding shoe brake - Design brakes

**DESIGN OF CLUTCHES****7****Hours**

Dynamic aspects of clutches – Torque transmitted in plate clutches, cone clutches and jaw clutches - Design of clutches

**CO1:** Apply the knowledge on Metal Structure Crystallization and Plastic Deformation

**CO2:** Apply the knowledge on the various phase diagrams and their applications

**CO3:** Apply the knowledge of failure mechanisms in failure analysis of metallic materials.

**CO4:** Apply the students will acquire knowledge on Fe-Fe<sub>3</sub>C phase diagram, various microstructures, and alloys

**CO5:** Apply the students will get knowledge on mechanical properties of materials and their measurement

**CO6:** Explain properties, structure and applications of composites, ceramics and nanomaterials

### OBJECTIVES:

To introduce the essential principles of materials science for mechanical and related engineering applications.

| CO/PO Mapping  |                          |     |     |     |     |     |     |     |     |      |      |      |      |      |

### Metal Structure, Crystallization and Plastic Deformation

**8 hours**

Atomic Structure – Atom binding, Crystal Structure – Body-centered cubic, Face-centered Cubic, Close-packed Hexagonal. Crystallographic planes, Mechanism of crystallization and Crystal Imperfections, Grain size and Grain Size Measurement. Deformation – Slip, Twinning and Fracture.

### PHASE DIAGRAMS

**8 hours**

Solid solutions - Hume Rothery's rules – the phase rule - single component system - one-component system of iron - binary phase diagrams - isomorphous systems - the tie-line rule - the lever rule - application to isomorphous system - eutectic phase diagram - peritectic phase diagram - other invariant reactions – free energy composition curves for binary systems - microstructural change during cooling.

### FAILURES OF METALS

**8 hours**

Fracture mechanisms -Griffith's theory - stress intensity factor, Ductile and brittle Fracture, Ductile to brittle transition, significance and fracture toughness- Environment sensitive fracture, Fatigue –Cyclic stress, S-N curve, crack initiation and propagation mechanisms, factors affecting fatigue life, Environment effects on fatigue, high temperature fracture – creep, procedure of failure analysis

*C. Sefuranga*

Approved by BoS Chairman

## **FERROUS ALLOYS**

**8 hours**

The iron-carbon equilibrium diagram - phases, invariant reactions - microstructure of slowly cooled steels - eutectoid steel, hypo and hypereutectoid steels - effect of alloying elements on the Fe-C system - diffusion in solids - Fick's laws - phase transformations - T-T-T-diagram for eutectoid steel – pearlitic, bainitic and martensitic transformations - tempering of martensite – steels – stainless steels – cast irons.

## **ADVANCED MATERIALS**

**8 hours**

Properties and applications of dual phase steels, high strength low alloy steel, Maraging steel, Special purpose steels – introduction to smart materials, engineering plastics and composites materials – properties and applications of ceramics – WC, TiC, TaC, CBN – types and applications of nanomaterials.

Approved by BoS Chairman

**CO1:** Understand the importance of paper publication as an essential part of research.

**CO2:** Analyze topic of professional interest.

**CO3:** Identify and analyze an engineering problem and perform literature survey.

**CO4:** Formulate the work plan for solving the complex engineering problem.

**CO5:** Prepare own report and check for plagiarism.

**CO6:** Create high quality research paper and publish in reputed journals and conference.

### OBJECTIVES:

To provide essential knowledge and skills required for writing, presenting and publish the technical papers.

### Course Assessment methods

| Direct  |
|---|
| 1. Review / viva<br>2. Report Preparation<br>3. Journal paper preparation<br>4. Publication |
| Indirect  |
| 1. Course-end survey  |

1. Students shall identify a current topic in his/ her branch of engineering and get approval from the concerned faculty.
2. Form a team not exceeding three students.
3. Identify a project supervisor based on specialization.
4. Collect sufficient literature on the topic and prepare your own report.
5. Work to be completed
  - a. Literature survey
  - b. Formulation of objective
  - c. Formulation of design and methodology
  - d. Formulation of work plan
  - e. Preparation of journal paper

Approved by BoS Chairman

f. Publication of paper in conference/ Scopus index journal

**6. Rubrics for Evaluation**

a. Technical Seminar Reviews

b. Paper publication

*C. Sefmuryan*

Approved by BoS Chairman

# VII Semester

*C. Setiawan*

Approved by BoS Chairman

**Course outcomes**

**After successful of the course, the student would be able to:**

**CO1:** Evaluate the economic theories, cost concepts and pricing policies

**CO2:** Analyze the market structures and integration concepts

**CO3:** Apply the concepts of national income and understand the functions of banks and concepts of globalization

**CO4:** Apply the concepts of financial management for project appraisal and working capital management

**CO5:** Understand accounting systems

**CO6:** Analyse financial statements using ratio analysis

**Pre-requisite:** Nil

**ECONOMICS, COST AND PRICING CONCEPTS**

**9 hours**

Economic theories – Demand analysis – Determinants of demand – Demand forecasting – Supply – Actual Cost and opportunity Cost – Incremental Cost and sunk Cost – Fixed and variable Cost – Marginal Costing – Total Cost – Elements of Cost – Cost curves – Breakeven point and breakeven chart – Limitations of break-even chart – Interpretation of break-even chart – Contribution – P/V-ratio, profit-volume ratio or relationship – Price fixation – Pricing policies – Pricing methods.

  
 Approved by BoS Chairman

**CONCEPTS ON FIRMS AND MANUFACTURING PRACTICES 9 hours**

Firm – Industry – Market – Market structure – Diversification – Vertical integration – Merger – Horizontal integration.

**NATIONAL INCOME, MONEY AND BANKING, ECONOMIC 9 hours**

**ENVIRONMENT**

National income concepts – GNP – NNP – Methods of measuring national income – Inflation – Deflation – Kinds of money – Value of money – Functions of bank – Types of bank – Economic liberalization – Privatization – Globalization

**CONCEPTS OF FINANCIAL MANAGEMENT 9 hours**

Financial management – Scope – Objectives – Time value of money – Methods of appraising project profitability – Sources of finance – Working capital and management of working capital

**ACCOUNTING SYSTEM, STATEMENT AND FINANCIAL ANALYSIS 9 hours**

Accounting system – Systems of book-keeping – Journal – Ledger – Trail balance – Financial statements – Ratio analysis – Types of ratios – Significance – Limitations

**Theory :45 hours Total: 45 hours**

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Illustrate the various circuits in steam power plant and working principle of boilers.

**CO 2:** Discuss the working of combustion equipment's, condensers, and cooling towers.

**CO 3:** Summarize the various nuclear reactors and waste disposal methods.

**CO 4:** Outline the steps involved in site selection and working principle of hydroelectric power plants.

**CO 5:** Explain the working of renewable power plants.

**CO 6:** Estimate the power plant load factor and utilization factor.

**Pre-requisite:** Nil

**STEAM POWER PLANT AND COMPONENTS****9****Hours**

Steam generators-types, forced circulation, high-pressure boilers and super critical boilers, fluidized bed boiler, boiler accessories and mountings, Draft- forced, induced and balanced drafts, Heat recovery equipment - Economisers, air preheaters and reheaters, different types of superheaters and de-superheaters, Boiler testing, Development of a process flow diagram, heat and mass balance of the components of a process flow diagram

**COMBUSTION EQUIPMENTS, CONDENSERS AND COOLING TOWERS****9 Hours**

Combustion equipments- Types of combustion, stokers, fuel and ash handling equipments. Selection of fans. Emission control, flue gas cleaning, particulate and gaseous emission control methods. Condensers and Cooling towers- Different types, design factors, air removal, performance calculation. Cooling towers- natural and mechanical draft types.

Approved by BoS Chairman

**NUCLEAR AND HYDEL POWER PLANTS****9 Hours**

Nuclear energy-General nuclear fuels used in reactors, elements of nuclear reactor, moderator, control rods, coolants, description of different types of reactors. Radiation hazards, radioactive waste disposal. Hydroelectric power plant- - Runoff river plants, pumped storage plants, underground stations, hydel plant axillaries and plant operation.

**RENEWABLE ENERGY SOURCES****9****Hours**

Concentrating collectors, photovoltaic cell. Horizontal and vertical types of wind turbines. Other plants: Geothermal plants, tidal power plant, biomass and biogas plants, and OTEC plants

**POWER PLANT ECONOMICS****9****Hours**

Plant load factor and utilization factor, cost economics – tariff rates, demand changes, load distributions. Energy conversion and audit.

**INTRODUCTION TO DIGITAL MANUFACTURING****9 hours**

Definition of digital manufacturing, Operation Mode and Architecture of Digital Manufacturing System. Design process and role of CAD, Types and applications of design models. Component modeling, Machine and tool selection, Defining process and parameters, Tool path generation, Simulation, Post processing. : Introduction, Principle, Thermo jet printer, Sander's model market, 3-D printer, Genisys Xs printer, JP system 5, object quadra system-Rapid proto typing.

**DIGITAL FACTORY AND PRODUCT LIFE CYCLE MANAGEMENT** **9 hours**

Introduction, Scope, Methods and Tools Used in Virtual Manufacturing, Benefits. Virtual factory simulation. Introduction, Types of Product Data, PLM systems, Features of PLM System, System architecture, Product information models, Functionality of the PLM Systems.

Approved by BoS Chairman

## **INTERNET OF THINGS**

**9 hours**

Introduction, Applications, IoT data management requirements, Architecture of IoT, Technological challenges, RFID and the Electronic Product Code (EPC) network, The web of things, Issues in implementing IoT.

## **INDUSTRY 4.0**

**9 hours**

Definition of Industry 4.0, Comparison of Industry 4.0 Factory and today's Factory. Cybernetics as the scientific basis of cyber-physical models. Cybersecurity in Industry 4.0. Virtual models of process control. The application of robotics in the I4.0. Industrial internet of things. Intelligent process control and intelligent diagnostics. Cyber-Physical Systems, Cloud Computing / Cloud Manufacturing. BLOCK Chain- Value chains in manufacturing companies.

## **INDUSTRIAL IOT- APPLICATION**

**9 hours**

Application Domains: Factories and Assembly Line, Food Industry. Healthcare, Power Plants, Inventory Management & Quality Control, Plant Safety and Security (Including AR and VR safety applications), Facility Management. Oil, chemical and pharmaceutical industry.

**Theory: 45 hours**

**Total: 45 hours**

- The aim of the project work is to deepen comprehension of principles by applying them to a new problem which may be the design, manufacture of a device, experimentation, simulation of systems.
- The work can be an innovative improvement of existing system and shall include modelling, design, experimentation, evaluation, fabrication and or analysis.
- Suitable methodology to be arrived by evaluating existing solutions. Suitable modern tools shall be used to find the solution.
- Every project work shall have a guide who is a faculty member of the of the institution.
- For industrial projects, supervisor from the organization will be a co-guide.
- Each project work will be carried out by a batch of maximum three students.

  
 Approved by BoS Chairman

- The project period allotted shall be utilized by the students to receive directions from the guide, on library reading, laboratory work, computer analysis or field work as assigned by the guide and to present periodical seminars on the progress made in the project.
- Continuous assessment shall be made as prescribed in the regulations.
- Progress of the project will be evaluated based on a minimum of three reviews.
- Review committee will be constituted by the Head of Department.
- Each student shall finally submit a report covering background information, literature survey, problem statement, methodology and use of modern tools within the stipulated date.
- Phase I Project students will extend and/or complete their work during the next semester as Phase II Project. However, they should complete a considerable part of their work during Phase I.

**ENTREPRENEURSHIP AND ECONOMIC DEVELOPMENT****8 hours**

Entrepreneur – Evolution – Characteristics of entrepreneur – Functions of entrepreneur – Differences between entrepreneur and manager – Differences between entrepreneur and intrapreneur - Types of entrepreneur –Contribution of Entrepreneurship to Economic Growth of Country –Economic and Non-economic factors affecting entrepreneurial growth.

**MOTIVATION****8 hours**

Definition – Nature of Motivation – Internal and External factors affecting Motivation - Training for Achievement - Kakinada experiment, Thematic appreciation test, Self-rating, Business game – Stress Management – Symptoms and causes of stress – Psychosomatic, psychological, Behavioral problems – Coping with stress.

**GROWTH STRATEGIES IN BUSINESS****8 hours**

Outline of role of enterprises – Ownership structure – Sole proprietorship, Partnership – Project formulation – Significance, Contents of a project - Objectives of business growth – Stages of growth – Internal growth

*C. Sefuranga*  
Approved by BoS Chairman

strategies – Expansion, Diversification - External growth strategies – Franchising – Joint Ventures – Acquisition – Mergers and Subcontracting.

### **INDUSTRIAL SICKNESS**

**7 hours**

Process of Industrial sickness – Signals and symptoms – Causes and consequences – corrective measures – Government policies – IPR 1948, IPR 1956, IPR 1977, IPR1980, IPR 1990.

### **FINANCING AND ACCOUNTING**

**7 hours**

Need for financing- Differences between Fixed capital and working capital – Sources of finance

Term loans – Financial institutions – Management of working capital- Gross working capital, Net working capital – Types of working capital – Factors determining working capital.

### **COSTING**

**7 hours**

Definition – Methods of costing – Classification of costs – Elements of costs –Breakeven point analysis - Network analysis - PERT/CPM – Taxation – Income Tax – Sales Tax – Excise duties.

**Theory: 45 hours**

**Total: 45 hours**

**Course outcomes**

After successful completion of the course, the students should be able to

**CO 1:** Identify an engineering problem from the society.

**CO 2:** Conduct systematic investigations, apply tools and develop solutions.

**CO 3:** Demonstrate awareness of safety, professional ethics, and concerns for environment and society.

**CO 4:** Communicate effectively through oral means and documentations.

**CO 5:** Manage projects with considerations of time and finances.

**CO 6:** Develop a team and contribute as a member and or as a leader.

- Phase II Project students should complete their work started in Phase I (Create a model/ fabricate a model/conduct experiments/simulate mechanical system/implement improved ideas for the project work carried in Phase-I)
- Capstone Project students should work on new projects and complete them.
- Internship is permitted for opting students who have received offers through the institution Placement Cell, with the approval of Project Coordinator and HoD,
- Continuous assessment shall be made as prescribed in the regulations.
- Progress in the course will be evaluated based on a minimum of three reviews.
- Review committee will be constituted by the Head of Department.
- Each student shall finally submit a comprehensive report on the work carried out as per the required format within the stipulated time.

**LOCATING AND CLAMPING PRINCIPLES**

**9 hours**

Objectives of tool design- Function and advantages of Jigs and fixtures – Basic elements – principles of location – Locating methods and devices – Redundant Location – Principles of clamping – Mechanical actuation – pneumatic and hydraulic actuation Standard parts – Drill bushes and Jig buttons – Tolerances and materials used.

**JIGS AND FIXTURES**

**9 hours**

Design and development of jigs and fixtures for given component- Types of Jigs – Post, Turnover, Channel, latch, box, pot, angular post jigs – Indexing jigs – General principles of milling, Lathe, boring, broaching and grinding fixtures – Assembly, Inspection and Welding fixtures – Modular fixturing systems- Quick change fixtures.

**PRESS WORKING TERMINOLOGIES AND ELEMENTS OF CUTTING DIES** **9 hours**

Press Working Terminologies - operations – Types of presses – press accessories – Computation of press capacity – Strip layout – Material Utilization – Shearing action – Clearances – Press Work Materials – Center of pressure- Design of various elements of dies – Die Block – Punch holder, Die

  
 Approved by BoS Chairman

set, guide plates – Stops – Strippers – Pilots – Selection of Standard parts – Design and preparation of four standard views of simple blanking, piercing, compound and progressive dies.

### **BENDING AND DRAWING DIES**

**9 hours**

Difference between bending and drawing – Blank development for above operations – Types of Bending dies – Press capacity – Spring back – knockouts – direct and indirect – pressure pads – Ejectors – Variables affecting Metal flow in drawing operations – draw die inserts – draw beads-ironing – Design and development of bending, forming, drawing, reverse redrawing and combination dies – Blank development for axisymmetric, rectangular and elliptic parts – Single and double action dies.

### **FORMING TECHNIQUES AND EVALUATION**

**9 hours**

Bulging, Swaging, Embossing, coining, curling, hole flanging, shaving and sizing, assembly, fine Blanking dies – recent trends in tool design- computer Aids for sheet metal forming Analysis – basic introduction - tooling for numerically controlled machines- setup reduction for work holding – Single minute exchange of dies – Poka Yoke.

**TOTAL: 45 hours**

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Develop the mathematical models for vibrating systems.

**CO 2:** Solve problems in vibrating systems with single degree of freedom.

**CO 3:** Explain two degree of freedom vibrating systems and solve simple problems.

**CO 4:** Examine the multi degree of freedom systems.

**CO 5:** Make use of proper instruments for vibration measurement.

**CO 6:** Explain about engineering noise and control.

**Pre-requisite:**

1. U18MET4003 Kinematics of Machinery
2. U18MEI5205 Dynamics of Machinery

**FUNDAMENTALS OF VIBRATION**

**9 hours**

Introduction -Sources of vibration-Mathematical Models-Types of vibration. Review of Single degree freedom systems with and without damping –Types of Damping- Dynamics of rotating and reciprocating engines– Critical speed of industrial rotors with specific reference to rigid and flexible rotors – Influence of type of bearings – Vibration isolation – Nonmetallic isolators.

**TWO DEGREE FREEDOM SYSTEM**

**9 hours**

Introduction- Free vibration of Undamped and damped system. Torsional system-Spring coupled system – mass coupled system – Vibration of two-degree freedom system – Forced vibration with harmonic Excitation – Dynamic

*C. Selvarajan*  
Approved by BoS Chairman

Vibration Absorber – Torsional Vibration Absorber-Vibration control.

**MULTI-DEGREE FREEDOM SYSTEM**

**9 hours**

Longitudinal, Transverse, Torsional systems, Geared systems Complexities – Normal mode of vibration – Flexibility Matrix and Stiffness matrix – Eigen values and eigen vectors – Orthogonal properties – Energy methods of Rayleigh, Ritz and Drunkenly

**EXPERIMENTAL VIBRATION ANALYSIS**

**9 hours**

Need for the experimental methods in Vibration analysis. Vibration Measuring Devices: seismometer, accelerometer and velometers-Vibration exciters: mechanical, hydraulic, electromagnetic and electrodynamic –Frequency measuring instruments: single reed, multi reed and stroboscope. Vibration meters and sound level meter. Signal conditioning devices: Filters, Amplifiers, Modulators/Demodulators, ADC/DAC. Signal analysis devices. Vibration recording and display devices. Experimental modal analysis. System Identification from frequency response

**ENGINEERING NOISE AND ITS CONTROL**

**9 hours**

Introduction-Sound Power, Sound Intensity and Sound pressure level. Sound spectra. The decibel scale-Decibel addition, subtraction and averaging- Loudness, Weighting networks, Equivalent sound level. Noise: Effects, Ratings and Regulations. Noise: Sources, Isolation and control-Industrial noise sources-Industrial noise control strategies-Noise control at the source, along the path and at the receiver.

**INTRODUCTION TO COMPOSITES**

**10 hours**

Fundamentals of composites - need for composites – Enhancement of properties - classification of composites – Functions and selection of matrix and reinforcement materials – Particle reinforced composites-Fiber reinforced composites- Rule of mixtures- Applications of various types of composites- Introduction to nano materials – Types of fibers, Clay fibers, Aramid fibers, Metal fibers, Alumina fibers, Borax fibers, Silicon carbide fibers, Multiphase fibers, Whiskers, flakes etc.

  
 Approved by BoS Chairman

## **METAL MATRIX COMPOSITES**

**9 hours**

Metal Matrix, Reinforcements – particles – fibres, Effect of reinforcement - Volume fraction. Various types of Metal Matrix Composites, Characteristics of MMC, Alloy vs. MMC, Advantages and limitations of MMC –Processing of MMC – Powder metallurgy process - diffusion bonding – stir casting – squeeze casting.

## **CERAMIC MATRIX COMPOSITES**

**9 hours**

Engineering ceramic materials – Properties – Advantages – Limitations – Monolithic ceramics - Need for CMCs – Ceramic matrix - Various types of Ceramic Matrix composites- oxide ceramics – Non oxide Ceramics – Aluminium oxide – Silicon nitride – Reinforcements – particles- fibres- whiskers. Sintering - Hot pressing – Cold isostatic pressing (CIPing) – Hot isostatic pressing (HIPing).

## **POLYMER MATRIX COMPOSITES**

**9 hours**

Polymer matrix resins – Thermosetting resins, thermoplastic resins – Reinforcement fibres – Rovings – Woven fabrics – Non-woven random mats – Various types of fibres. Methods for producing PMC - Hand layup processes – Spray up processes – Compression moulding – Reinforced reaction injection moulding - Resin transfer moulding – Pultrusion – Filament winding – Injection moulding. Fibre Reinforced Plastics (FRP), Glass fibre Reinforced Plastics (GRP).

## **TESTING OF COMPOSITES**

**8 Hours**

Mechanical testing of composite – tensile testing – compressive testing-infra laminar shear testing, infra laminar shear testing, fracture testing.

**Theory : 45 hours**

**Total : 45 hours**

**INTRODUCTION**

**8 hours**

Process selection evaluation method. process capability and process capability metrics – General design principles of manufacturability – Material selection – Strength and Mechanical factors- geometric tolerances, surface finish, cumulative effect of tolerances - Worst case method, Root sum square method.

  
 Approved by BoS Chairman

**FACTORS INFLUENCING FORM DESIGN****8 hours**

Working principle, Material, Manufacture, Design-, Production method, size, surface property Influence of materials on form design - castings, aluminium casting, pressure die casting, Plastic molding, form design of welded members

**COMPONENT DESIGN – MACHINING AND CASTING CONSIDERATION****8 hours**

Design features to facilitate machining –Twist drill –Drill entry and run out counter sunk head screws-Redesign of casting based on parting line consideration-pattern, mould, parting line, cast holes-cored holes, machined holes, identify the possible and probable parting line.

**DESIGN FOR THE ENVIRONMENT****16 hours**

Introduction to Environmental objectives – Global issues – Regional and local issues – Basic DFE methods – Design guide lines – Lifecycle assessment – Basic method – AT&T's environmentally responsible product assessment - Weighted sum assessment method – Lifecycle assessment method – Techniques to reduce environmental impact – Design to minimize material usage – Design for disassembly – Design for recyclability – Design for remanufacture – Design for energy efficiency – Design to regulations and standards.

**CASE STUDIES****5 hours**

Application concepts of design for manufacture in real time conditions- Exposure on DFM software.

**Theory: 45 hours****Total: 45hours****REFERENCES:**

### **Introduction**

**7 hours**

Introduction – Tribology in design – Tribology in industry – Economic considerations – Friction, Wear and Lubrication – Nature of surfaces – Contact between surfaces –Bearings – Sliding contact and rolling contact.

### **Friction**

**7 hours**

Types – Empirical relations – Origin – Measurement – Theories – Other mechanisms – Friction in metals and non-metals.

### **Wear**

**7 hours**

Types – Factors affecting wear - Theories – Mechanisms – Measurement – Regimes of wear – Wear in metals and non-metals – Approaches to wear reduction.

### **Lubrication**

**9 hours**

Fundamentals of viscosity – Measurement of viscosity - Effect of temperature, pressure and shear rate on viscosity - Principle and application of hydrostatic, hydrodynamic lubrication, elasto hydrodynamic lubrication, boundary and solid lubrication – Types and properties of lubricants – Speed and load effects on lubrication – lubrication in rolling, drawing and forging.

*C. Velamuri*

Approved by BoS Chairman

## **Adhesion and Bearing Materials**

**8 hours**

**Adhesion:** Adhesion due to contact, surface tension – Factors influencing adhesion – Stiction

**Bearing Materials:** Typical bearing materials – Properties – Advantages and disadvantages – Construction of rolling, fluid film lubricated and dry bearings

## **Surface Engineering hours**

**7**

**Surface Engineering:** Introduction – Surface modification – Transformation Hardening, Surface Melting, Thermo chemical Processes – Surface coatings – Plating and Anodizing – Fusion Processes, Vapor Phase Processes – Selection of coating – Properties and parameters.

**INTRODUCTION TO REFRIGERATION**

**9 hours**

Refrigeration and second law of thermodynamics-Engine, refrigerator and heat pump- Methods of Refrigeration- Evaporative refrigeration, Refrigeration by expansion of air, Refrigeration by throttling of gas, Ice refrigeration, Steam jet refrigeration, Dry ice refrigeration, Refrigeration by using liquid gases- Refrigerants- Properties & selection- Environmental impact of refrigerants- System components- Compressors Evaporators- Condensers- Thermostatic Expansion devices- Cooling towers.

  
 Approved by BoS Chairman

## **VAPOUR COMPRESSOR REFRIGERATION SYSTEM**

**9 hours**

Simple vapour compression refrigeration cycle- T-S, and p-h charts for VCR system- presentation of different process on p-h chart- COP from T-S chart- Advantages and Disadvantages of VCR over air compression refrigeration- Methods for improving COP – Single load and multi load systems. Methods for Defrosting- Air refrigeration – Bell Coleman Air refrigerator – Simple cooling & Simple evaporative type – Boot strap & Boot strap evaporative type. air refrigeration- Bell Coleman Air refrigerator- Simple cooling and simple evaporative type- Boot strap and boot strap evaporative type.

## **ABSORPTION REFRIGERATION SYSTEM**

**9 hours**

Introduction- Basic absorption system- Actual ammonia absorption system- Lithium Bromide absorption refrigeration system- Electrolux refrigerator – Actual Electrolux refrigerator- COP of absorption refrigeration system.

Non-conventional refrigeration – Vortex tube – Thermo Electric refrigeration- Pulse tube refrigeration- Cooling by adiabatic demagnetization.

## **AIRCONDITIONING SYSTEM**

**9 hours**

Methods of air conditioning – Direct expansion- All water systems- All air systems- Combined systems- Heat pump systems- Air conditioning equipments – Air filters – Humidifiers- Dehumidifiers- fans and blowers- cooling towers and spray ponds- Air distribution system. Types of air conditioners- Window, split type and central air conditioning – Applications- Automotive air conditioning.

## **COOLING LOAD CALCULATIONS**

**9 hours**

Different heat sources- Types of load- Conduction heat load, radiation heat load, radiation load of sun, Occupants load, Equipment load, Infiltration load, Fresh air load- Bypass factor- Effective room sensible heat factor- Design of space cooling load. Basics of Air duct design. Heat pump – Types-Working fluids for heat pumps- Heat pump circuit- Performance of Heat pump.

**Theory: 45 hours**

**Total: 45 hours**

**Computational Fluid Dynamics**

**L T P J C**

(Use of Psychrometric chart and Refrigeration Table is permitted.) **3 0 0 0 3**

**Course outcomes**

**After successful completion of the course, the student would be able to**

**CO 1:** Understand the governing equations of fluid dynamics and boundary conditions

**CO 2:** Understand the Discretization techniques

**CO 3:** Apply the knowledge of finite difference discretization methods for solving one dimensional heat conduction equation

**CO 4:** Apply finite volume techniques for different schemes for solving one dimensional heat conduction equation.

**CO 5:** Understand various grid generation methods.

**Pre-requisite:** U18MEI4202 Fluid Mechanics and Machinery  
U18MEI6201 Heat and Mass Transfer.

**INTRODUCTION AND GOVERNING EQUATIONS**

**9 hours**

Introduction - Impact and applications of CFD in diverse fields - Governing equations of fluid dynamics – Continuity - Momentum and energy - Generic integral form for governing equations - Initial and Boundary conditions - Classification of partial differential equations – Hyperbolic - Parabolic - Elliptic and Mixed types - Applications and relevance.

  
 Approved by BoS Chairman

**DISCRETIZATION BASIC ASPECTS OF DISCRETIZATION****10 hours**

Discretization techniques – Introduction to Finite difference - Finite volume method – central, forward and backward difference expression for uniform grid-central difference expression for Non-uniform grid- Difference equations - Numerical Error- Grid independence test.

**FINITE DIFFERENCE METHODS FOR CONDUCTION HEAT TRANSFER****10 hours**

One-dimensional and two-dimensional steady state heat conduction-Transient one-dimensional heat conduction –Methods of solutions- Explicit - Implicit - Crank-Nicolson– Stability criterion.

**FINITE VOLUME METHODS FOR CONVECTION – DIFFUSION****8 hours**

Steady one-dimensional convection and diffusion - Central difference, upwind, quick, exponential, hybrid and power law schemes. Numerical procedure for SIMPLE algorithm.

**INTRODUCTION TO GRID GENERATION****8 hours**

Choice of grid, grid-oriented velocity components, Cartesian velocity components, staggered and collocated arrangements, adaptive grids.

**Course Outcomes**

After successful completion of the course, the students should be able to

**CO1:** To understand various optimization techniques and apply them to thermal design

**CO2:** To expose mathematical tools for characterization of performance of energy equipment

**CO3:** To learn basic principles underlying pumping, heat exchangers modeling and optimization in design of thermal systems

**CO4:** To study modelling methods for thermal equipment's and learn simulation techniques

**CO5:** To optimization concerning design of thermal systems

**CO6:** To develop representational modes of real processes and systems

**Pre-requisites:**

1. U18MET3004 Thermodynamics
2. U18MEI4202 Fluid Mechanics and Machinery
3. U18MEI6201 Heat and Mass Transfer

**CONSTRUCTIONAL DETAILS AND HEAT TRANSFER****8****hours**

Types – Shell and Tube Heat exchangers- Regenerators and Recuperators- Industrial Applications of Heat exchangers- Temperature Distribution and its Implications- Analysis of Heat Exchanger – LMTD and effective method ( $\epsilon$ -NTU method), fouling factor.

Approved by BoS Chairman

## **FLOW ANALYSIS**

**4**

### **hours**

Tube side pressure drop for circular cross section tubes, pressure drop in tube bundles in cross flow.

## **DESIGN ASPECTS**

**13**

### **hours**

Heat exchanger design methodology, Basic logic structure of process heat exchanger design, Rating of the preliminary design of heat exchanger. Baffle type and geometry, TEMA standards, Design of Shell and Tube Heat exchangers (Bell-Delaware Method).

## **COMPACT AND PLATE HEAT EXCHANGERS**

**13**

### **hours**

Design of Compact Heat exchangers and Plate Heat Exchangers (Kakac method).

## **STEAM CONDENSERS**

**7 hours**

Thermal design of shell and tube condensers (Kakac method)

**Note: The fluid for heat exchangers are considered to be air, water, oil. Chemicals are not been considered and S.I units are to be followed.**

**Theory: 45 hours**

**Total Hours: 45**

|--|-------------------|
| 1. Internal Test I<br>2. Internal Test II<br>3. Assignment<br>4. Group Presentation<br>5. Tutorial<br>6. End semester exam | Course end survey |

**COMPRESSIBLE FLOW – FUNDAMENTALS****9 hours**

Energy and momentum equations for compressible fluid flows, various regions of flows, reference velocities, stagnation state, velocity of sound, critical states, Mach number, critical Mach number, types of waves, Mach cone, Mach angle, effect of Mach number on compressibility- Use of Gas tables.

Approved by BoS Chairman

**FLOW THROUGH VARIABLE AREA DUCTS****9 hours**

Isentropic flow through variable area ducts, T-s and h-s diagrams for nozzle and diffuser flows, area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles- Phenomenon of choking

**FLOW THROUGH CONSTANT AREA DUCTS****9hours**

Flow in constant area ducts with friction (Fanno flow) - Fanno curves and Fanno flow equation, variation of flow properties, variation of Mach number with duct length.

Flow in constant area ducts with heat transfer (Rayleigh flow), Rayleigh line and Rayleigh flow equation, variation of flow properties, maximum heat transfer- Applications.

**NORMAL SHOCK****9hours**

Governing equations, variation of flow parameters like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock, Prandtl – Meyer equation, impossibility of shock in subsonic flows, flow in convergent and divergent nozzle with shock- Use of tables and charts.

**PROPULSION****9 hours**

Aircraft propulsion – types of jet engines – study of turbojet engine components – diffuser, compressor, combustion chamber, turbine and exhaust systems, performance of turbo jet engines – thrust, thrust power, propulsive and overall efficiencies

Rocket propulsion – rocket engines thrust equation – effective jet velocity specific impulse – rocket engine performance, solid and liquid propellants.

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Explain the vehicle structures, lubrication, cooling and emission control systems.

**CO 2:** Summarize the various fuel injection, ignition and electrical systems of an automobile.

**CO 3:** Describe the working principle of various components in transmission systems.

**CO 4:** Discuss the various steering mechanisms and suspension systems.

**CO 5:** Compare the conventional and antilock braking systems.

**CO 6:** Discuss the usage of various alternate energy sources in automobiles.

**Pre-requisite:** Nil

**VEHICLE STRUCTURE AND ENGINES****9 hours**

Types of Automobiles - Vehicle Construction – Chassis – Frame and Body – Aerodynamic forces. Engine components, Materials and functions - Cooling and Lubrication systems in engines – Turbo Chargers – Engine Emission Control by three-way Catalytic converter – Electronic Engine Management System.

Approved by BoS Chairman

**ENGINE AUXILIARY SYSTEMS****9 hours**

Carburetor–working principle - Electronic fuel injection system – Mono-point and Multi - Point Injection Systems – Construction, Operation and Maintenance of Lead Acid Battery - Electrical systems – Battery generator – Starting Motor and Drives – Lighting and Ignition (Battery, Magneto Coil and Electronic Type) - Regulators-cut outs.

**TRANSMISSION SYSTEMS****10 hours**

Clutch – Types and Construction – Gear Boxes, Manual and Automatic – Floor Mounted Shift Mechanism – Over Drives – Fluid flywheel - Torque converters– Propeller shaft – Slip Joint – Universal Joints – Differential and Rear Axle – Hotchkiss Drive and Torque Tube Drive – Introduction to rear wheel drive.

**STEERING, BRAKES AND SUSPENSION****9 hours**

Wheels and Tyres – Wheel Alignment Parameters - Steering Geometry and Types of steering gear box– Power Steering – Types of Front Axle – Suspension systems – Braking Systems – Types and Construction – Diagonal Braking System – Antilock Braking System.

**ALTERNATIVE ENERGY SOURCES****8 hours**

Use of Natural Gas, LPG, Biodiesel, Alcohol and Hydrogen in Automobiles - Electric and Hybrid Vehicles, Fuel Cells – Introduction to off road vehicles.

**INTRODUCTION****9 hours**

History – Development of RP systems – Applications in Product Development, Reverse Engineering, Rapid Tooling, Rapid Manufacturing- Principle –Fundamental – File format – Other translators – medical applications of RP – On demand manufacturing – Direct material

**LIQUID BASED AND SOLID BASED RAPID PROTOTYPING SYSTEM****9 hours**

Classification – Liquid based system - Stereo Lithography Apparatus (SLA), details of SL process, products, Advantages, Limitations, Applications and Uses. Solid based system - Fused Deposition Modelling, principle, process, products, advantages, applications and uses - Laminated Object Manufacturing

Approved by BoS Chairman

**POWDER BASED RAPID PROTOTYPING SYSTEMS****9 hours**

Selective Laser Sintering – principles of SLS process, principle of sinter bonding process, Laser sintering materials, products, advantages, limitations, applications and uses. Three-Dimensional Printing – process, major applications, research and development. Direct shell production casting – key strengths, process, applications and uses, case studies, research and development. Laser Sintering System, e-manufacturing using Laser sintering, customized plastic parts, customized metal parts, e-manufacturing - Laser Engineered Net Shaping (LENS).

**MATERIALS FOR RAPID PROTOTYPING SYSTEMS****9 hours**

Nature of material – type of material – commercial shapes – selection of material and applications – polymers, metals, ceramics and composites liquid based materials, photo polymer development – solid based materials, powder-based materials – case study.

**REVERSE ENGINEERING AND NEW TECHNOLOGIES****9 hours**

Introduction, measuring device- contact type and non-contact type, CAD model creation from point clouds-pre-processing, point clouds to surface model creation, medical data processing - types of medical imaging, software for making medical models, medical materials, other applications - Case study.

**INTRODUCTION****9 hours**

Need for Modern Advanced Machining Processes - Classification based on Materials – Machining Methods – Energy – Processes Selection – Physical Parameters – Cost of Production – Volume of Production – Shapes of Product – Process Capability – Economical Production

Approved by BoS Chairman

## **MECHANICAL ENERGY BASED PROCESSES**

**9hours**

Ultrasonic Machining – Principles – Transducer Type – Concentrators – Abrasive Slurry – Process Parameters – Tool Feed Mechanisms – Advantages – Limitations – Applications – Abrasive Jet Machining – Process – Principle – Process Variables – Material Removal Rate – Advantages and Disadvantages – Applications – Water Jet Machining – Principle Process Variables – Advantages and Disadvantages – Applications.

## **ELECTRICAL DISCHARGE MACHINING AND ELECTRICAL DISCHARGE WIRE CUT MACHINING**

**9**

**hours**

Electrical Discharge Machining – Mechanism of Material Removal – Dielectric Fluid – Electrodes Materials – Spark Erosion Generators – Electrode Feed System – Material Removal Rate – Process Parameters – Tool Electrodes Design – Characteristics of Spark Eroded Surfaces – Advantages and Disadvantages – Applications – Electrical Discharge Wire Cut and Grinding – Principle – Wire Feed System – Advantages and Disadvantages – Applications.

## **CHEMICAL AND ELECTRO-CHEMICAL ENERGY BASED PROCESSES**

**9 hours**

Chemical Machining – Fundamentals – Principle – Classification – Selection of Etchant – Chemical Milling – Engraving – Blanking – Drilling – Trepanning - Advantages – Disadvantages – Applications – Electro Chemical Machining – Electro Chemistry Process – Electrolytes – Properties – Material Removal Rate – Tool Materials – Tool Feed Systems – Design of Electrolyte Flow – Process Variables – Advantages – Disadvantages – Applications – Electro Chemical Grinding – Honing – Cutting Off – De burring – Turning.

## **ELECTRON BEAM – LASER BEAM – ION BEAM PLASMA ARC MACHINING AND MICRO MACHINING**

**9 hours**

Electron Beam Machining – Principle – Generation – Control of Electron Beam – Advantages – Disadvantages – Applications – Laser Beam Machining – Principle – Solid – Gas – Laser Methods – Applications – Thermal Features – LBM – Advantages – Disadvantages – Applications – Ion Beam Machining – Equipment – Process Characteristics – Advantages – Disadvantage – Applications – Plasma Arc Machining – Principle – Gas Mixture – Types of Torches – Process Parameters – Advantages – Disadvantages – Applications – Introduction – Definition – Micro Machining – Classification of Micro Machining – Nano Machining – Nano Finishing - Mechanical – Thermal Micro Machining – Electro Discharge – Electron Beam – Laser Beam – Electro Chemical – Nano Finishing

**Theory: 45 hours**

### ARC WELDING PROCESSES

**9 hours**

Heat Sources, Power Sources, Arc Phenomena, Arc Blow, Power Source Characteristics, V-I, Relationship, Different Types of Electrodes and their applications, Electrode Polarity, Shielding Gas, Use of Pulsed Arc and GTA Spot Welding.

### PLASMA ARC WELDING PROCESSES

**6 hours**

Special Features of Plasma-Arc Transferred and Non- Transferred Arc, Keyhole and Puddle-In Mode of Operation, Process Characteristics and Applications, Advantages and limitations.

*C. Sefurungam*

Approved by BoS Chairman

**RESISTANCE AND SOLID-STATE WELDING****8 hours**

Upset and Flash Butt Welding, Electro Slag and Electro Gas Welding. Solid State Welding: Friction Welding, Friction Stir and Induction Pressure Welding, Process Characteristics and Applications, Explosive, Diffusion and Ultrasonic Welding, Principles of Operation, Process Characteristics and Applications Weldability of Resistance Welding process calculations. Welding current and Electrode feed rate calculation for Electroslag Welding

**ELECTRON AND LASER BEAM WELDING****9 hours**

Electron Beam Welding in Different Degrees of Vacuum, LBW: Physics of Lasers, Types of Lasers, Operation, Process Characteristics and Applications, Advantages and Limitations.

**OTHER BONDING PROCESSES****6 hours**

Adhesive Bonding, Thermal Cutting Processes, Metal Surfacing and Spraying Processes, Automation in Welding, Specific Welding Applications and Innovations, Economics of Welding, Safety in Welding, Standard Time and Cost Calculation.

**TESTING AND DESIGN OF WELD JOINTS****7 hours**

Design Criteria and Quality Control of Welds. Edge preparation Types of Joints, Weld Symbols. Stresses in Butt and Fillet Welds – Weld Size Calculations, Design for Fatigue. Testing of Welds – Tensile, Bend, Hardness, Impact, Notch and Fatigue Tests, Life Assessment of Weldment

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Apply the basic concepts of lean manufacturing

**CO 2:** Apply forecasting systems and supply chain management concept for effective operational decision making

**CO 3:** Apply capacity planning for managing multistage production system

**CO 4:** Apply the concepts of pull production systems for better manufacturing performance

**CO 5:** Apply JIT philosophy to improve product flow

**CO 6:** Apply theory of constraints for shop scheduling and shop floor control

**Pre-requisite:** Nil

**LEAN MANUFACTURING - OVERVIEW****9 hours**

Measures of competitiveness, Functional areas of firm, Product design, manufacture, delivery, Principles of Production system –Learning curves- Product demand life cycle-Capacity balancing, Role of inventory and information.

**MANUFACTURING STRATEGY AND SUPPLY CHAIN****9 hours**

Forecasting systems – Purposes and uses of forecasts, manufacturing strategy – Dimensions, Aggregate planning – Planning tradeoffs.

Supply chain management concepts –Logistic information systems-Product design and customization- Vendor selection and contracting-Operational decisions in distribution systems.

**MULTISTAGE PRODUCTION SYSTEMS****9 hours**

Materials requirement planning, Capacity Planning-Rough cut capacity planning-Capacity requirement planning-Load Reports-Incorporating Stochastic behavior, Lot sizing decisions, Managing change, Limitations of MRP, Introduction to multistage product structures, Types of inventory, Inventory costs.

**DECENTRALIZED PULL SYSTEMS& JIT PHILOSOPHY****9 hours**

Kanban systems –Single and dual systems-Scheduling rules, Environmental regulations, Constant work in process pull alternative (CONWIP)-Performance

JIT production systems, Improving the production environment towards JIT– Improving product flow– The transition to lean

**SHOP SCHEDULING & SHOP FLOOR CONTROL****9 hours**

Scheduling system requirements, goals and measures of performance – Theory of constraints-Flow shop scheduling

Shop Floor Control system architecture – Manufacturing execution system – Tool management system – Flexible manufacturing systems.

**Theory: 45 hours****Total:45 hours****REFERENCES:**

**Course outcomes**

After successful completion of the course, the students should be able to

- CO 1: Outline the importance of plant location analysis.
- CO 2: Extend types of layout and infer steps in layout design.
- CO 3: Apply production planning techniques in product design and development.
- CO 4: Outline process flow tasks and measures for managing flow variability.
- CO 5: Analyze the importance of process design.
- CO 6: Classify the various techniques of inventory management.

**Pre-requisite:**            NIL

**PLANT LOCATION**

**9 Hours**

Plant Location analysis – Importance – Location Decisions – Classifications of location decisions- Location decision factors- Process of selecting a new plant – Comparisons between Service and Manufacturing Locations -Globalization and MNC’s - Location and layout.

  
 Approved by BoS Chairman

**PLANT LAYOUT****9 Hours**

Need for a layout study- Generic steps involved- Types of layout-Product, Process, Fixed Position, Combined layouts- Factors Influencing layout- Objectives of layout problems- Steps in layout design - Plant layout Procedure – Steps and Approaches.

**PRODUCTION PLANNING AND CONTROL****9 Hours**

Introduction and Evolution – Objectives – Benefits – Functions – Types of Production – Product Design and Development-Product Analysis–Profit considerations - Standardization, Simplification, Specialization - Break even analysis.

**PROCESS DESIGN****9 Hours**

Process flow and tasks - Process flow diagram and Flow Charts –Process performance measures –Little's law – Flow time measurement-Starvation and blocking- Process flow structures- Managing flow variability- Process Design - Process improvement.

**INVENTORY CONTROL****9 Hours**

Inventory Analysis – Objectives and Purpose of holding stock - Costs and risks associated with inventory-Techniques of Inventory Management-ABC, EOQ, EPQ, Order Point Problems, Two bin technique, VED, HML, FSN, JIT.

**Course outcomes**

**After successful completion of the course, the students should be able to**

CO 1: Justify significance of a logistics and its relationship to supply chain management.

CO 2: Identify and resolve contemporary issues in a logistic environment

CO 3: Understand basics of supply chain and its overview

CO 4: Analyze impact of sourcing decision in supply chain performance

CO 5: Build distribution network design by analyzing its influencing factors

Pre-requisite: NIL

**LOGISTICS**

**15 hours**

Evolution – Significance of Logistics- Progression of competitive advantage – Value chain- Key activities and processes – Logistic strategy – Hierarchy of logistic management decisions – Relationship of Logistics to Marketing and Production -Logistics Integration – Nodes and links in logistic networks -- Logistic Environment – Cost tradeoff in Logistics - Contemporary issues in logistics – Logistics versus supply chain management - Key to fast cycle logistics.

  
 Approved by BoS Chairman

**SUPPLY CHAIN BASICS****10 hours**

Introduction - Traditional scope of the supply chain- Evolution of supply chain – Supply chain overview and Objectives – Flow in supply chain- Decision phases of a supply chain- Process view of a supply chain- Cycle view and Push/Pull view - Supply chain Macro process - Case studies of successful supply chains.

**SOURCING DECISIONS AND SUPPLY CHAIN PERFORMANCE****10 hours**

Role of sourcing and benefits of effective sourcing decisions- Supplier scoring and assessment factors - Supplier selection - Contracts and supply chain performance- Design collaboration- The Procurement Process - Product Categorization-Sourcing planning and analysis- Framework of the drivers of Supply Chain performance - Achieving a strategic fit.

**DISTRIBUTION AND SUPPLY CHAIN NETWORK DESIGN****10 hours**

Introduction to distribution channels - Role of distribution in a supply chain- Factors Influencing distribution network design- Design options for a distribution network- Distribution Networks in Practice - Network design decisions-Factors influencing network design decisions- Framework for global site location-Conventional networks and tailored networks.

**INTRODUCTION - SAFETY****8 hours**

Definition-Milestones in industrial safety movement-safety responsibility and organization  
 – Occupational safety and health administration (OSHA) –safety measures in planning, production and inspection – safety and productivity

**INDUSTRIAL ACCIDENTS AND HAZARDS****8 hours**

Introduction- types of accidents in industry – Causes and prevention of accidents –accident reporting – accident reporting and analysis –Classification of hazards – Hazard management program- Major Industrial hazards – safety audit

Approved by BoS Chairman

## **INDUSTRIAL FATIGUE, ENVIRONMENTAL FACTORS, AND INDUSTRIAL WASTE**

**7 hours**

Fatigue – types, factors contributing to fatigue, Environment – Temperature, noise, illumination, vibration, heat, ventilation and air-conditioning - Waste – classification – harmful effect – primary and secondary treatment- waste disposal

### **HUMAN SIDE OF SAFETY**

**8 hours**

Personal protective equipment – Need, choice, respiratory and non-respiratory protective equipment, Training and maintenance- Occupational health problems – diseases and first aid - Fire hazards and prevention, Electrical hazard prevention and safety

### **WELFARE AND HANDLING EMERGENCIES**

**7hours**

Employee welfare-Statutory welfare schemes, Health hazards-Control strategies- Non-statutory schemes - Emergencies – need, objectives and emergency planning process- Safety symbols –signs, colors and categories -

### **SAFETY ORGANIZATION AND ACTS**

**7 hours**

Purpose of a safety organization-Safety policy- Safety committee- types- Role of safety coordinator- Responsibilities, Interferences and Sufferings of safety supervisor-Safety publicity- ISO14000 – Environmental management systems – ISO 9000 – Factories act 1948.

**Theory : 45 hours**

**Total: 45 hours**

| 1. Internal Test I<br>2. Internal Test II<br>3. Assignment<br>4. Group Presentation<br>5. End semester exam | Course end survey |

**INTRODUCTION****9 Hours**

Introduction to Industrial Markets - Industrial Marketing System - Concepts - Characteristics – Definition – Exchange processes – Characteristics of Industrial and Consumer markets – Industrial Market demand – Cross elasticity of demand.

**INDUSTRIAL PURCHASING****9 Hours**

Types of Industrial Customers - Purchasing practices - Industrial Buyer Behaviour – Industrial buying situation – Decision Making Units – Models of Organizational buying behavior- Modern Purchasing terminologies.

|   |
|---|
| <br>Approved by BoS Chairman |
|---|

## **MARKETING PLANNING AND RESEARCH**

**9 Hours**

Business Marketing – Marketing Planning – Corporate Strategic Planning – Target Marketing - Marketing Information Systems – Market Evaluation - Role of IT in Marketing Information Systems - Definition and Process of Marketing Research - Research Instruments.

## **PRODUCT DEVELOPMENT AND PRICING**

**9 Hours**

Industrial Products and Services definition - New Industrial Product Development – Product Life Cycle - Marketing strategies - Industrial Pricing Characteristics- Influencing factors in pricing decisions of Industrial Markets-Classification of costs-Pricing Strategies.

## **CHANNEL DESIGN**

**9 Hours**

Channel Design Process - Economic performances and channel management decisions- Industrial Logistics system- Role and Characteristics of Industrial Distributors- Sales Promotion – Personal Selling - Sales Force Management – Advertising in Industrial Marketing – Industrial Communication programs.

## U18MEC0001 PRODUCT DESIGN AND DEVELOPMENT

L T P J C  
1 0 0 0 1

Prerequisite: No Prerequisite

**CO1:** Apply concepts of product development and outline product planning process

### **INTRODUCTION - DEVELOPMENT PROCESSES AND ORGANIZATIONS – PRODUCT PLANNING** **5 Hours**

Characteristics, duration, the challenges and cost of successful product development. A generic development process, concept development: the front-end process, adapting the generic product development process, the AMF development process, the AMF organization. The product planning process, identify opportunities. Evaluate and prioritize projects, allocate resources, complete pre project planning, reflect all the results and the process.

### **IDENTIFYING CUSTOMER NEEDS - PRODUCT SPECIFICATIONS** **5 Hours**

Gathering raw data from customers, interpreting raw data in terms of customer needs, organizing the needs into a hierarchy, establishing the relative importance of the needs and reflecting on the results and the process. Specifications, establish specifications, establishing target specifications setting the final specifications.

### **CONCEPT GENERATION - CONCEPT SELECTION - CONCEPT TESTING** **5 Hours**

Concept generation activity, clarify the problem search externally and internally, explore systematically, reflect on the results and the process, Overview of methodology, concept screening, concept scoring, caveats. Purpose of concept test, choosing a survey population and a survey format, communicate the concept, measuring customer response, interpreting the result, reflecting on the results and the process.

Approved by BoS Chairman

Prerequisite – U18MET2001 Manufacturing Technology

**Introduction****5 Hours**

Introduction to smart manufacturing, Manufacturing and Assembly Technology, Automated Production Systems, Handling Systems, Industrial Robots, Design and planning of automated production facilities, Benefits of SM.

**Components and Elements of Manufacturing****5****Hours**

Internet of Things, Machine learning, Big data. Elements of Manufacturing: Sensor networks and Devices.

**Data Management****5 Hours**

Reporting Methodology, Collection, consolidation, and reporting of the data Management of smart manufacturing processes and Augmented Production, Challenges in implementation.

**Textbooks & Reference Books:**

Approved by BoS Chairman

**U18MEC0003 NANOTECHNOLOGY: MECHANICAL**

**L T P J C**

**ENGINEERING'S NEW FRONTIER**

**1 0 0 0 1**

**BASICS OF NANO TECHNOLOGY**

**06 Hours**

Introduction – nanomaterial – nanoscience- nano engineering -nanomanufacturing – PVD and CVD method – Characterization Techniques – SEM – FESEM – AFM – TEM – EDS and X-RD analysis.

**NANOCOMPOSITES**

**06 Hours**

Composites – types – nano composites – fabrication methods – Solid and Liquid state – properties analysis.

**APPLICATION ON NANOTECHNOLOGY**

**03 Hours**

Nanotechnology – robotics- combustion-biomedicine- heat transfer.

(Nanoengineering is also one of the most interdisciplinary of the sciences, requiring knowledge of mechanical engineering, chemical engineering, electrical engineering, biology, physics, photonics, and materials science – by Mark Crawford, ASME )

**COURSE OUTCOME**

1. Have a better fundamental understanding of nanotechnology.
2. Apply the concept of microscope techniques to find the structural changes nanomaterials.
3. Apply the nanotechnology to solve the mechanical engineering problems.

Approved by BoS Chairman

**Course outcomes**

**After successful completion of the course, the students should be able to**

**CO 1:** Analyse stress and vibration in various components in the design perspective.

**Pre-requisite:** Strength of Materials

**Course Assessment methods:**

| <b>Direct</b>     | <b>Indirect</b>   |
|-------------------|-------------------|
| End Semester Exam | Course End Survey |

**Course Content**

1. Stress analysis of a plate with a circular hole.
2. Stress analysis of rectangular L bracket
3. Stress analysis of an axi-symmetric component
4. Stress analysis of a roof truss.
5. Stress analysis of beams (Cantilever, Simply supported, Fixed ends)
6. Mode frequency analysis of a 2 D component
7. Mode frequency analysis of beams (Cantilever, Simply supported, Fixed ends)
8. Harmonic analysis of a 2D component
9. Thermal stress analysis of a 2D component
10. Conductive heat transfer analysis of a 2D component
11. Convective heat transfer analysis of a 2D component
12. Introduction to ANSYS Workbench

**Total: 30 Hours**

  
Approved by BoS Chairman

**ENERGY AND ENVIRONMENT****7 Hours**

Primary energy sources - world energy resources - energy cycle of the earth and Global warming – Renewable energy resources and their importance - Potential impacts of harnessing the different renewable energy resources.

**DIRECT ENERGY CONVERSION SYSTEM****8 Hours**

Fuel cells and its classification; Transport mechanism in fuel cells and concept of energy conversion. Solid oxide fuel cells (SOFC); PEM fuel cells; Direct methanol fuel cells (DMFC), Molten carbonate fuel cell (MCFC)-. Hydrogen conversion and storage systems.

**U18MEC0206 Advanced Heat Transfer Enhancement  
Techniques**

**L T P J C  
1 0 0 0 1**

Classification of advanced heat transfer enhancement techniques- Active and Passive methods **- 2 Hours**

Active heat transfer enhancement techniques-Promotion of forced convection **- 1 hours**

Passive heat transfer enhancement techniques-Surface extrusion, Boundary layer disruption, Effective thermal conductivity enhancement **- 2 hours**

Blocking and meshing in ICEM CFD [Lab Component] **- 5 hours**

Analysis using Fluent- Flow through heat exchanger and Application of Nanofluid [Lab component]

**5 hours**
