# KUMARAGURU COLLEGE OF TECHNOLOGY,

# M. Tech - DATA SCIENCE REGULATION 2024

I to IV Semesters

**Department of Information Technology** 

#### **VISION**

The department of Information Technology aspires to become a school of excellence in providing quality education, constructive research, and professional opportunities in Information Technology

#### **MISSION**

- To provide academic programs that engage, enlighten, and empower the students to learn technology through practice, service, and outreach
- To educate the students about social responsibilities and entrepreneurship
- To encourage research through continuous improvement in infrastructure, curriculum, and faculty development in collaboration with industry and institutions

#### PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The Program Educational Objectives of Data Science Postgraduate Program are

**PEO1:** Graduates of the program will be employed in industry, government, and entrepreneurial endeavours to have a successful professional career.

**PEO2:** Graduates of the program will pursue higher education and /or research.

**PEO3:** Graduates of the program utilize the acquired technical skills and knowledge for the benefit of society.

#### PROGRAM OUTCOMES (POs)

Graduates of the Data Science Postgraduate Program should have the ability to:

| PO1: | An ability to independently carry out research /investigation and development work to |
|------|---|
|      | solve practical problems  |
| PO2: | An ability to write and present a substantial technical report/document               |
| PO3: | Students should be able to demonstrate a degree of mastery over the area as per the   |
|      | specialization of the program. The mastery should be at a level higher than the       |
|      | requirements in the appropriate bachelor program                                      |
| PO4: | Apply knowledge of data science methodologies, algorithms, and technologies to        |
|      | design, develop, and implement data-driven applications that address real-world       |
|      | challenges  |
| PO5: | Develop innovative and ethical data analytics solutions that cater to societal and    |
|      | industrial needs  |

| COMPREHENDING DATA SCIENCE THROUGH REPORTS   | 12 Hours |
|--|----------|
| dentifying Key Ideas and Supporting Details, Summarizing Technical Content, Reading  |          |
| Strategies for Understanding Complex Data Science Texts, Structure of a Technical Report,  |          |
| Vriting Clear and Concise Abstracts, Developing an Introduction, Methodology, and Conclusion, Jsing Data Visualizations and Explaining Results, Structure of a Research Paper in Data Science, |          |
| Developing Logical Arguments and Supporting Evidence and Citation Styles and Avoiding  |          |
| Plagiarism.  |          |
| Develop the ability to comprehend data science literature and write technical reports.   |          |
| OOCUMENTATION, AND PREPARING PROJECT REPORTS IN DATA SCIENCE REPORTING   | 12 Hours |
| Writing User Manuals and Technical Documentation, Documenting Code and Algorithms, Creating Data Science Project Reports, Best Practices for Clear and Effective Documentation.                |          |
| Understand the structure and elements of a document, research article, etc. in data science, and epresent the same.  |          |
| DRAL PRESENTATIONS AND COLLABORATION IN DATA SCIENCE   | 12 Hours |
| Structuring a Data Science Presentation, Using Visual Aids Effectively (Graphs, Charts, Tables),   |          |
| Techniques for Explaining Complex Data Clearly, Handling Questions and Engaging the  |          |
| Audience, Effective Communication in Data Science Teams, Discussing Data Science Concepts  |          |
| n English, Collaborative Writing and Peer Reviews, Managing and Leading Data Science Meetings.   |          |
| Develop Oral Presentation skills and contribute to collaborative communication.  |          |
| CASE STUDIES, PROJECTS, AND PRESENTATIONS IN DATA SCIENCE  | 12 Hours |
| Analyzing Case Studies in Data Science, Writing Case Study Reports, Group Discussions on Case  |          |
| Study Outcomes, Practical Exercises in Data-Driven Decision Making, Individual or Group  |          |
| Projects: Writing and Presenting a Data Science Report, Peer Review and Feedback Sessions,   |          |
| Final Presentation of Data Science Projects and Course Reflection and Language Development Plan.   |          |
|  |          |

| Course Content  |         |
|---|---------|
| VECTOR SPACES   | 8 Hours |
| Vector spaces and subspaces - Null spaces, column spaces and linear transformations -Bases -            |         |
| Dimension of a vector space – Rank – Change of basis – Eigenvalues and Eigenvectors of Real             |         |
| Symmetric Matrices – Diagonalization of symmetric matrices – Singular value decomposition.              |         |
| Practical Component   | 8 Hours |
| Understanding the MATLAB Interface and Basic MATLAB Commands.   |         |
| Vectors and Matrices, plotting, saving and loading data, writing and running scripts.                   |         |
| Understanding the R Interface and Basic R Commands.   |         |
| Vectors and Matrices, Plotting in R, Data Frames and Basic Data Manipulation, Importing Data            |         |
| from a CSV File, Writing and Running Scripts.   |         |
| Basic vector operations, Basis and Dimension in MATLAB, Eigenvalues and Eigenvectors in                 |         |
| MATLAB, Singular Value Decomposition (SVD) in MATLAB.   |         |
| PROBABILITY AND RANDOM VARIABLES  | 9 Hours |
| Axioms of probability - Conditional probability - Statistical independence - Law of total               |         |
| probability - Baye's theorem - Random variable - Discrete and Continuous random variables -             |         |
| Probability mass function – Probability density function – Expected value of a random variable.         |         |
| Practical Component   | 4 Hours |
| Probability Distributions, Expected Value Calculation in R.   |         |
| TWO-DIMENSIONAL RANDOM VARIABLES  | 9 Hours |
| Pairs of random variables – Marginal and conditional distributions – Expected values of functions       |         |
| of two variables- Central limit theorem - Normal distribution -properties - Bivariate Normal            |         |
| distribution – Multivariate Normal distribution.  |         |
| Practical Component   | 4 Hours |
| Marginal and Conditional Distributions in R, Central Limit Theorem in MATLAB, Normal                    |         |
| Distribution in R.  |         |
| REGRESSION ANALYSIS AND ESTIMATION  | 9 Hours |
| Curve fitting by method of least squares – Assessing the reliability of predictions using goodness-     |         |
| of-fit measures such as $R^2$ , Adjusted $R^2$ , RMSE, MAE, and MAPE – Correlation – Properties of      |         |
| correlation coefficient – Linear regression – Least square estimation of regression coefficients –      |         |
| Regression lines – Maximum Likelihood Estimation.   |         |
| Practical Component   | 6 Hours |
| Correlation, Linear Regression in R and Curve Fitting using Least Squares in MATLAB.                    |         |
| MULTIVARIATE ANALYSIS   | 5 Hours |
| Random vector – Mean Vector – Correlation Matrix - Covariance Matrix – Principal components             |         |
| <ul> <li>Population Principal Components - Principal Components from standardized variables.</li> </ul> |         |
| Practical Component   | 4 Hours |
| Principal Component Analysis (PCA) in R and Covariance and Correlation Matrix in MATLAB.                |         |
| CLASSICAL OPTIMIZATION THEORY   | 5 Hours |
| Unconstrained optimization problems – Equality constraints – Lagrange's method.                         |         |
| Practical Component   | 4 Hours |
| Solve constrained optimization problems using Lagrange multipliers in MATLAB.                           |         |

| Theory    | Tutorial | Practical |        | rial Practical |        |   | Project |    | Total |  |

| <b>Course Content</b>   |         |
|---|---------|
| INTRODUCTION TO RESEARCH METHODS  | 9 Hours |
| Definition and Objectives of Research - Scientific Methods, Various Steps in Scientific Research, |         |
| Research planning - Selection of a Problem for Research, Formulation of the Selected Problems     |         |
| -Purpose of the Research, Formulation of research objectives - Formulation of research questions  |         |
| - Hypotheses Generation and Evaluation -Literature search, and review, Research abstract.         |         |
| Practical Component   | 8 Hours |
| Problem formulation.  |         |
| Formulate research questions for domain specific Problems.  |         |

| Signature of the BOS Chairman |
|-------------------------------|
|                               |

| RESEARCH DESIGN/PLAN  Types and Methods of Research - Classification of Research - Sampling Techniques, Methods of Collecting Primary Data, Use of Secondary Data, Experimentation - Design of Experiments, Survey Research and Construction of Questionnaires - Pilot Studies and Pre-tests - Data Collection methods, Processing of Data, Editing, Classification and Coding, Transcription, Tabulation, Validity and Reliability.   | 9 Hours            |
|--|--------------------|
| RESEARCH REPORTS/THESIS  Structure and Components of Research Report/thesis, Types of Report, Planning of Report/thesis Writing, Research Report Format, Layout of Research Report, Presentation of data and Data Analysis Reporting, Mechanism of writing a research report, Principles of Writing, Writing of Report-Writing of thesis-Differences between thesis and research paper writing.  Practical Component  1. Software tool to identify predatory publications 2. Journal finder / journal suggestion tools viz. JANE, Elsevier Journal Finder, Springer,   | 9 Hours<br>8 Hours |
| Journal Suggester, etc.  PHILOSOPHY AND ETHICS  Introduction to philosophy: definition, nature and scope, concept, branches - Ethics: definition, moral philosophy, nature of moral judgements and reactions. Ethics with respect to science and research - Intellectual honesty and research integrity - Scientific misconducts: Falsification, Fabrication and Plagiarism (FFP) - Redundant Publications: duplicate and overlapping publications, salami slicing - Selective reporting and misrepresentation of data.  Practical Component  1. Indexing database - Citation databases Scopus and Web of science.  2. Plagiarism software - Use of plagiarism checking software like Turnitin, Urkund and other open-source software tools. | 9 Hours 8 Hours    |
| PUBLICATION ETHICS AND OPEN ACCESS PUBLISHING  Publication ethics: definition, introduction and importance -Publication misconduct: definition, concept, problems that lead to unethical behaviour and vice versa, types - Violation of publication ethics, authorship and contributor ship - Identification of publication misconduct, complaints and appeals.  Practical Component  1. Research Metrics: Impact Factor of journal as per Journal Citations Report, SNIP, SJR, IPP, Cite Score - Metrics: h-index, g index, i10 Index.  2. Open access publications and initiatives.  3. Upload manuscript to a journal through editorial manager.  | 9 Hours 6 Hours    |

| Theory |    | Tutorial |   | Practical |           | Project |   | Total         |           |
|--------|----|----------|---|-----------|-----------|---------|---|---------------|-----------|
| Hours: | 45 | Hours:   | 0 | Hours:    | <b>30</b> | Hours:  | 0 | <b>Hours:</b> | <b>75</b> |

| Course Content   |          |
|--|----------|
| FOUNDATIONS OF DATA ANALYSIS   | 12 Hours |
| Exploratory Data Analysis (EDA): Advanced techniques for summarizing data, identifying   |          |
| patterns, and outlier detection. Statistical Inference: Hypothesis testing, confidence intervals, and  |          |
| p-values in the context of large datasets Data Cleaning and Preprocessing: Handling missing  |          |
| data, data imputation, normalization, and feature scaling. Correlation and Causation: Techniques   |          |
| for identifying and quantifying relationships between variables.   |          |
| Practical Component  | 8 Hours  |
| Implement Exploratory Data Analysis, Dimensionality Reduction and Data Pre-processing.   |          |
| OVERVIEW OF DATA VISUALIZATION   | 12 Hours |
| Visualization Principles: Understanding color theory, perceptual principles, and effective visual encoding. Plotting Libraries: Advanced usage of Matplotlib, Seaborn, Plotly, and Bokeh for static and interactive visualizations Geospatial Data Visualization: Techniques for visualizing spatial data, including maps, choropleths, and heatmaps using Folium and Geopandas. Time-Series Visualization: Techniques for visualizing temporal data, including line charts, candlestick charts, |          |
| and horizon charts. Network Visualization: Visualization of complex networks, using tools like   |          |
| NetworkX, Gephi, and D3.js. Real-Time Data Visualization.  |          |
| Practical Component  | 8 Hours  |
| Creating complex visualizations using tools like Matplotlib, Seaborn, Plotly.  |          |
| ADVANCED VISUALIZATION AND DASHBOARDING  | 12 Hours |
| Interactive Dashboards: Creating dynamic dashboards using tools like Tableau, Power BI, and Dash. Custom Visualizations: Building custom visualizations using D3.js - Techniques for visualizing streaming data, using Apache Kafka and real-time dashboards. Visualization Best Practices: Ethical considerations, avoiding misleading visualizations, and ensuring accessibility.  |          |
| Practical Component  | 8 Hours  |
| Creating interactive dashboards using Tableau and Power BI.  |          |
| APPLICATIONS AND CASE STUDIES  | 9 Hours  |
| Business Analytics: Applying data analysis and visualization techniques to business data for   |          |
| decision-making. Healthcare Data Visualization: Techniques for visualizing and analyzing   |          |
| complex healthcare datasets, including patient records and genomic data. Financial Data Analysis:  |          |
| Visualization and analysis of financial data, including stock prices, economic indicators, and   |          |
| portfolio performance. Social Media Analytics: Techniques for analyzing and visualizing social   |          |
| media data, including sentiment analysis and network graphs.   |          |
| Practical Component  | 6 Hours  |
| Working with large datasets from industries like finance, healthcare, and social media.  |          |

| Theory    | Tutorial | Practical Project Total |           | Total  |   |           |
|-----------|----------|-------------------------|-----------|--------|---|-----------|
| Hours: 45 | Hours:   | 0                       | Hours: 30 | Hours: | 0 | Hours: 75 |

| Course Content   |         |
|--|---------|
| INTRODUCTION TO DATA SECURITY AND CRYPTOGRAPHIC DATA INTEGRITY                             | 9 Hours |
| APPROACH   |         |
| Data Security Concepts-Security Attacks-Security Services-Security Mechanisms-Model for    |         |
| Security-Classical Encryption Principles-Classical Encryption Techniques-Block Ciphers and |         |
| Data Encryption Standards-Block Cipher Design Principles-Advanced Encryption Standard-     |         |
| Public Key Cryptography and RSA-Cryptographic Hash Functions-Message Authentication        |         |
| Codes.   |         |
| Practical Component  | 6 Hours |

| Signature of the BOS Chairman |
|-------------------------------|
|                               |

| Demonstration of Classical Cryptographic algorithms.  |         |
|---|---------|
| Analyse the algorithms in a simulator.  |         |
| NETWORK AND INTERNET SECURITY   | 9 Hours |
| Network access control and cloud security-Data Protection in cloud-Transport Layer Security:    |         |
| Web security considerations-Transport Layer Security (TLS)-HTTPS-Secure Shell-Wireless          |         |
| Network Security-Electronic Mail Security-IP Security.  |         |
| Practical Component   | 6 Hours |
| Demonstrate various Email attacks and Phishing related attack using Pen testing tools.          |         |
| Demonstrate the protection of sensitive data through encryption to ensure data privacy on HIPAA |         |
| data.   |         |
| DATA PRIVACY PRINCIPLES AND DATA STORAGE SECURITY   | 9 Hours |
| Data Privacy Principles -Personal Data vs. Sensitive Data-Data Collection, Processing, and      |         |
| Storage-Data Ownership and Control-Importance of Privacy Policies- Key Elements of a Privacy    |         |
| Policy- Data Protection Measures: Anonymization and Pseudonymization, Secure Data Storage       |         |
| and Transmission- Role-Based Access Control (RBAC)- Data Masking- Data Center Security-         |         |
| Data Segregation: Logical Segregation and Physical Segregation.                                 |         |
| Practical Component   | 6 Hours |
| Apply data minimization principles by removing non-essential fields and ensuring that only      |         |
| necessary data is collected and stored.   |         |
| Configure access control mechanisms for a database or file storage system.                      |         |
| DATA THREATS AND THREAT MANAGEMENT  | 9 Hours |
| Cyberattacks- Data Breaches- Insider Threats- Physical Threats- Advanced Persistent Threats     |         |
| (APTs)- Social Engineering- Risk Assessment-Access control, Firewalls and Intrusion Detection   |         |
| Systems (IDS)- Data Backup and Recovery: Regular Backups, Disaster Recovery Planning-           |         |
| Monitoring and Incident Response - Compliance and Auditing -Case Studies: Cyber-attacks on      |         |
| data breach.  |         |
| Practical Component   | 6 Hours |
| Demonstration of Social Engineering attacks.  |         |
| COMPLIANCE ASSESSMENT AND PRIVACY REGULATIONS   | 9 Hours |
| Legal and Ethical Issues in Computer Security: Protecting Programs and Data, Information and    |         |
| the Law, Rights of Employees and employers, Redress for Software Failures, Computer Crime,      |         |
| Ethical Issues in Computer Security. Legal Regulation Act: General Data Protection Regulation   |         |
| (GDPR), California Consumer Privacy Act (CCPA), Personal Data Protection Act (PDPA).            |         |
| Practical Component   | 6 Hours |
| Demonstration of various mechanism to ensure data is free from software and Hardware related    |         |
| attacks.  |         |

| Theory |    | Tutorial |   | <b>Practical</b> |           | Project |   | Total         |           |

# INTRODUCTION TO EXPLORATORY RESEARCH AND IDEATION Importance of exploratory research in innovation-Differences between exploratory and confirmatory research-Overview of the ideation process -When to use exploratory research-Exploratory research questions-Exploratory vs. explanatory research-Advantages and disadvantages of exploratory research. Activity: Explore the differences between exploratory and confirmatory research. Task: Conduct a literature review on a selected topic, summarize findings, and present in groups. Tool/Method: Secondary research, peer discussions, and presentation tools. EXPLORATORY RESEARCH TECHNIQUES 12 Hours

| Signature of the BOS Chairman |  |
|-------------------------------|--|
|                               |  |

| Literature review and secondary research-Qualitative research methods: interviews, focus groups, and ethnographic studies-Quantitative methods: surveys and data analysis-Tools for organizing and analysing research findings. |           |
|---|-----------|
| Activity1: Hands-on practice with qualitative research methods (interviews, focus groups,   |           |
| ethnographic studies).  |           |
| <b>Task</b> : Conduct an interview or focus group related to a specific problem. Document and analyse   |           |
| results.  |           |
| <b>Tool/Method</b> : Audio/video recording tools, transcription, thematic analysis.   |           |
| Activity2: Practice survey design and data analysis for exploratory research.   |           |
| Task: Design a survey for a selected research topic, collect data from peers, and analyse the results   |           |
| using basic statistical methods.  |           |
| Tool/Method: Google Forms/SurveyMonkey, Excel/SPSS for data analysis.   |           |
| IDEATION TECHNIQUES   | 12 Hours  |
| Brainstorming: methods and best practices-Mind mapping and concept mapping-SCAMPER  |           |
| (Substitute, Combine, Adapt, Modify, Put to another use, Eliminate, Reverse) technique-Role-  |           |
| playing and scenario analysis-Use of digital tools for ideation.  |           |
|   |           |
| Activity: Ideation exercises using brainstorming and mind mapping.  |           |
| Task: Choose a complex problem, conduct a brainstorming session, and map out ideas using  |           |
| digital or manual mind mapping techniques.  |           |
| Tool/Method: Mind mapping software (e.g., MindMeister, XMind), SCAMPER technique  |           |
| EVALUATING AND REFINING IDEAS   | 12 Hours  |
| Criteria for evaluating ideas: feasibility, impact, and innovation-Iterative design and prototyping-  | 12 110018 |
| Feedback loops and collaborative refinement-Techniques for overcoming creative blocks.  |           |
| reedback loops and conaborative termement-rechniques for overcoming creative blocks.  |           |
| Activity: Criteria-based evaluation of ideas generated in previous sessions.  |           |
| <b>Task:</b> Refine ideas based on feasibility, impact, and innovation potential using feedback loops   |           |
| and peer reviews.   |           |
| <b>Tool/Method:</b> Iterative prototyping tools (e.g., Sketch, Figma), peer feedback.   |           |
| APPLICATION IN VARIOUS CONTEXTS   | 12 Hours  |
| Case studies in technology, product design, and academic research-Cross-disciplinary  | 12 Hours  |
| applications of research and ideation techniques- Exploratory research data collection-Step-by-   |           |
| step example of exploratory research.   |           |
|   |           |
| Activity: Develop and present a comprehensive research project, incorporating all stages of   |           |
| exploratory research and ideation.  |           |
| Task: Choose a real-world problem, conduct exploratory research, apply ideation techniques,   |           |
| and present findings.   |           |
| Tool/Method: Presentation tools (e.g., PowerPoint, Prezi), report writing.  |           |

| Course Content   |         |
|--|---------|
| BIG DATA   | 8 Hours |
| Definition, characteristics (Volume, Velocity, Variety, Veracity, Value) - Big Data vs Traditional |         |
| Data - Data generation sources (IoT, social media, Transactions) - Data storage types: Structured, |         |
| Semi-Structured, Unstructured - Data storage, Processing and Scalability - Security and Privacy    |         |
| concerns - Data Quality and Governance - Overview of Big Data platforms.                           |         |
| Practical Component  | 4 Hours |
| Hands-on with Hadoop, MapReduce.   |         |

| Signature of the BOS Chairman |  |

|                               |  |

| HADOOP   | 10 Hours |
|--|----------|
|  | 10 Hours |
| History and evolution of Hadoop - Hadoop ecosystem and components -Hadoop distributions -      |          |
| Hadoop Architecture: Hadoop cluster architecture - Role of NameNode, DataNode, and             |          |
| Secondary NameNode - HDFS (Hadoop Distributed File System): HDFS architecture and              |          |
| components - HDFS design and goals - HDFS blocks, replication, and fault tolerance - Setting   |          |
| Up a Hadoop Cluster: Single-node and multi-node cluster setup - Configuration files - Managing |          |
| and monitoring Hadoop clusters - Introduction to MapReduce: MapReduce programming model        |          |
| - Phases of MapReduce - Combiner and Partitioner in MapReduce - Advanced MapReduce             |          |
| concepts (Joins, Counters, Distributed Cache).   |          |
| Practical Component  | 4 Hours  |
| Big Data analytics using cloud services.   |          |
| BIG DATA PROGRAMMING PARADIGMS   | 9 Hours  |
| Functional Programming, Parallel Programming - Introduction to Python/Scala for Big Data -     |          |
| Data Processing with Pig and Hive - Introduction to Apache Spark: RDDs, DataFrames, Spark      |          |
| SQL - Real-time processing with Spark Streaming - Working with GraphX and MLib - Case          |          |
| Study: Analyzing customer behavior.  |          |
| Practical Component  | 10 Hours |
| Data processing using Hive and Pig.  |          |
| Real-time data processing with Apache Spark.   |          |
| Data analysis using machine learning algorithms in Spark.                                      |          |
| ADVANCED DATABASE SYSTEMS  | 9 Hours  |
| NoSQL Databases: Key-Value Stores (Redis, Riak) - Document Stores (MongoDB, CouchDB) -         |          |
| Column Stores (HBase, Cassandra) - Graph Databases (Neo4j) - SQL vs NoSQL: ACID vs BASE        |          |
| properties - Query optimization, indexing in NoSQL - Case Study: Healthcare data analytics.    |          |
| Practical Component  | 4 Hours  |
| Data ingestion and ETL using Apache Flume, Sqoop.  |          |
| REAL-TIME DATA PROCESSING  |          |
| Stream Processing: Introduction to real-time data and event-driven architecture - Frameworks:  | 9 Hours  |
| Apache Storm, Flink, Kafka Streams - Case Studies: Real-time monitoring, Fraud detection -     |          |
| Lambda and Kappa Architectures: Combining batch and stream processing -Design and              |          |
| implementation for low-latency data processing.  |          |
| Practical Component  | 8 Hours  |
| Building real-time data pipelines using Kafka and Flume.                                       |          |
| Stream processing with Apache Storm, Flink.  |          |

| Theory Tutorial |        |   | Practical | Project  |   | Total         |           |
|-----------------|--------|---|-----------|----------|---|---------------|-----------|
| Hours: 45       | Hours: | 0 | Hours: 3  | 0 Hours: | 0 | <b>Hours:</b> | <b>75</b> |

| Course Content  |         |
|---|---------|
| INTRODUCTION  | 8 Hours |
| Natural Language Processing – Components - Basics of Linguistics and Probability and Statistics |         |
| - Words-Tokenization-Morphology-Finite State Automata.  |         |
| Practical Component   | 6 Hours |
| Implement foundational NLP tasks such as tokenization and morphological analysis using Python   |         |
| libraries.  |         |

| Signature of the BOS Chairman |
|-------------------------------|
|                               |

| STATISTICAL NLP AND SEQUENCE LABELLING  | 10 Hours |
|---|----------|
| N-grams and Language models –Smoothing -Text classification- Naïve Bayes classifier –           |          |
| Evaluation - Vector Semantics - TF-IDF - Word2Vec- Evaluating Vector Models -Sequence           |          |
| Labelling – Part of Speech – Part of Speech Tagging - Named Entities – Named Entity Tagging.    |          |
| Practical Component   | 6 Hours  |
| Implement text classification using Python libraries.   |          |
| CONTEXTUAL EMBEDDING  | 9 Hours  |
| Constituency -Context Free Grammar -Lexicalized Grammars- CKY Parsing - Earley's                |          |
| algorithm- Evaluating Parsers -Partial Parsing - Dependency Relations- Dependency Parsing -     |          |
| Transition Based - Graph Based.   |          |
| Practical Component   | 6 Hours  |
| Develop and evaluate language models, sequence labelling techniques, and parsers for syntactic  |          |
| and dependency structures.  |          |
| COMPUTATIONAL SEMANTICS   | 9 Hours  |
| Word Senses and WordNet - Word Sense Disambiguation - Semantic Role Labelling -                 |          |
| Proposition Bank- FrameNet- Selectional Restrictions - Information Extraction - Template        |          |
| Filling.  | 6 Hours  |
| Practical Component   |          |
| Explore semantic role labelling and word sense disambiguation for creation of dialogue systems. |          |
| DISCOURSE ANALYSIS AND SPEECH PROCESSING  | 9 Hours  |
| Discourse Coherence – Discourse Structure Parsing – Centering and Entity Based Coherence –      |          |
| Question Answering -Factoid Question Answering - Classical QA Models - Chatbots and             |          |
| Dialogue systems – Frame-based Dialogue Systems – Dialogue–State Architecture.                  |          |
| Practical Component   | 6 Hours  |
| Explore discourse analysis by creating dialogue systems and basic question-answering models.    |          |

| The p | The purpose of taking this course is to:  |  |  |  |  |  |
| 1     | To identify and define a research problem in the data science domain with societal or |  |  |  |  |  |
|       | industrial relevance.   |  |  |  |  |  |
| 2     | To conduct a comprehensive literature survey and gap analysis.                        |  |  |  |  |  |
| 3     | To formulate a clear research methodology and plan of execution.                      |  |  |  |  |  |
| 4     | To document the project idea with a structured interim report                         |  |  |  |  |  |

| Cour  | Course Outcomes:   |                                    |  |  |  |
|---|--|------------------------------------|--|--|--|
| After successful completion of this course, the students shall be able to |  | Bloom's<br>Taxonomy<br>Level (BTL) |  |  |  |
| CO 1  | Identify a relevant research problem in data science and formulate research objectives.            | An                                 |  |  |  |
| CO 2  | Conduct a critical review of existing literature and summarize research gaps.                      | An                                 |  |  |  |
| CO 3  | Design a suitable methodology or solution framework for the selected problem.                      | Ap                                 |  |  |  |
| CO 4  | Present the problem statement, methodology and expected outcomes in a structured technical report. | Ap                                 |  |  |  |
| CO5   | Demonstrate initial prototype development or simulation results aligned with the research plan.    | Ap                                 |  |  |  |

| utcomes     | Prog                   | ram Outcomes (         | PO) (Strong-3     | 3, Medium – 2,               | Weak-1)                        |

| FUNDAMENTALS OF IOT   | 6 Hours |
|---|---------|
| Overview of IoT: Concepts, terminologies, characteristics and Evolution-IoT ecosystem and |         |
| standards - IoT architecture -types-design considerations- Applications and challenges    |         |
| IoT Hardware Platform: IoT Devices-Sensors-Behavior, Selection, Circuits -Actuators -     |         |
| embedded system and Microcontrollers, Battery Issue and Energy Management- IoT hardware   |         |
| platforms (Arduino, Raspberry Pi- NVIDIA Jetson).   |         |
| Practical Component   | 6 Hours |
| Set up an IoT development board (e.g., Arduino, Raspberry Pi) and connect various sensors |         |
| (temperature, humidity, motion etc.,).  |         |
| IOT PROTOCOLS   | 6 Hours |

| Application Layer Protocols-MQTT, CoAP, HTTP, AMQP- Network Layer Protocols:                        |            |
|---|------------|
| 6LoWPAN, RPL, IPv6, Zigbee, LoRaWAN, BLE, GSM/GPS- Edge and Fog Computing:                          |            |
| Concepts and Architectures- Connectivity Challenges in IoT.   | 4 Hours    |
| Practical Component   | 1 110 41 5 |
| Write a basic script to read data from sensors and display it on a local console.                   |            |
| DATA STORAGE AND MANAGEMENT FOR IOT   | 6 Hours    |
| IoT cloud Storage -IoT Core Services-IoT Registry-IoT Rules-IoT Shadows- MQTT/HTTP/Web              |            |
| sockets- Computing on the Edge - IoT Greengrass-Deeplens-Time-series databases (InfluxDB,           |            |
| TimescaleDB)-IoT data streaming and real-time databases- Security and privacy issues in IoT         |            |
| data storage.   | 8 Hours    |
| Practical Component   |            |
| Collect and store IoT data using cloud and local storage solutions.                                 |            |
| IOT ANALYTICS   | 6 Hours    |
| IoT Analytics- Types of Analytics- Descriptive Analytics -Predictive Analytics-Prescriptive         |            |
| Analytics and Decision Making-Time Series Analysis- IoT Analytics Platforms- Open-Source            |            |
| Tools for IoT Analytics.  |            |
| Practical Component   | 6 Hours    |
| Process and analyze IoT data in real-time.  |            |
| IOT SECURITY  | 6 Hours    |
| Security Threats and Vulnerabilities-Security Mechanisms: Authentication, authorization, and        |            |
| encryption techniques-Secure firmware updates and device management-Privacy Considerations:         |            |
| Data privacy regulations (GDPR, CCPA)-Privacy-preserving techniques and data                        |            |

# INTRODUCTION TO CLOUD COMPUTING FOR DATA ENGINEERING Overview of Cloud Computing: Evolution of modern IT and the role of cloud computing in transforming data engineering and IT practices. Major Cloud Service Providers: An introduction to leading cloud platforms, focusing on their key services and capabilities related to data engineering. Cloud Deployment Models: Understand the differences between Public, Private, and Hybrid Cloud models, and how each affects data storage, processing, and scalability. Service

Signature of the BOS Chairman

Models: IAAS, PAAS, SAAS and their applications in data engineering workflows.

| Practical Component:  | 6 Hours |
|---|---------|
| Account Setup and Dashboard Exploration of different clouds, deploy a virtual machine using   | o mouns |
| IaaS.   |         |
| CORE CLOUD SERVICES   | 7 Hours |
| Introduction to Cloud Services: Essential cloud services used for data storage, processing, and   |         |
| analytics. Features, scalability, and key use cases for data storage and building data lakes. Explore   |         |
| ETL (Extract, Transform, Load) processes and the creation of data pipelines. Big data processing  |         |
| and analytics using popular frameworks like Hadoop and Spark. Data warehousing solutions for  |         |
| large-scale data analysis. Serverless computing for efficient and scalable data processing tasks.   |         |
| Techniques for migrating databases Cloud solutions for big data processing. Orchestrate data  |         |
| pipelines using cloud orchestration service.  |         |
| Practical Component:  | 6 Hours |
| Cloud Services for Extraction, Transform and Load.  |         |
| ADVANCED CLOUD DATA MANAGEMENT AND PROCESSING   | 6 Hours |
| Build and manage data lakes for centralized data storage and processing, ensuring efficient data  |         |
| governance and security. configuration and usage of VMs for scalable data processing tasks,   |         |
| Relational database services: MySQL, MariaDB, PostgreSQL, Oracle, and Microsoft SQL Server.   |         |
| Managing identity and access control - secure handling and protection of data within cloud  |         |
| environments. Integration of big data and data warehousing capabilities for advanced analytics,   |         |
| enabling comprehensive insights and data-driven decision-making.  |         |
| Practical Component:  | 6 Hours |
| Run a sample data processing job, such as a word count or data aggregation task in cloud,   |         |
| Infrastructure and Database Deployment.   |         |
| CLOUD STORAGE AND IDENTITY MANAGEMENT   | 6 Hours |
| Cloud Storage Solutions: Scalable data storage options using different cloud Storage and focusing   |         |
| on best practices for data management. Identity and Access Management (IAM): Manage users,  |         |
| groups, roles, and policies to ensure secure data access and maintain compliance within cloud   |         |
| environments. Data Modelling and Schema Design: Concepts of data modelling and schema   |         |
| design, and how they influence data engineering workflows and efficiency.   | ( II    |
| Practical Component:  | 6 Hours |
| Upload, manage, and access different types of data (e.g., CSV, JSON). Implement versioning and lifecycle policies. Compare scalability and performance. |         |
| CLOUD SECURITY AND BEST PRACTICES   | 6 Hours |
| Security in Cloud Computing: Strategies to ensure data protection, privacy, and compliance  | o nours |
| within cloud environments. Comprehensive security management and threat protection offered  |         |
| by Cloud. Compliance and Governance: Implementing data encryption, key management, and  |         |
| regulatory compliance to secure cloud-based data and meet governance requirements. Disaster   |         |
| Recovery and Business Continuity Planning (BCP): Develop strategies to ensure data availability,  |         |
| resilience, and continuity in the face of potential disruptions, critical for data engineering  |         |
| contexts.   |         |
| Practical Component:  | 6 Hours |
| Create IAM users, groups, roles, and policies. Implement least privilege access for cloud   |         |
| resources and test access controls.   |         |
| resources and test access controls.   | L       |

| <b>Course Content</b>   |         |
|---|---------|
| BLOCKCHAIN AND DECENTRALIZATION FUNDAMENTALS Blockchain architectures (public, private, consortium) - Decentralized storage concepts and IPFS basics - Cryptographic primitives: Hashing, Merkle Trees, Digital Signatures - Consensus mechanisms: PoW, PoS, PBFT, DPoS - Blockchain scaling challenges: Layer 1 vs Layer 2 solutions - Blockchain interoperability: Polkadot, Cosmos | 7 Hours |
| Practical Component Setup blockchain environment with Node.js, Ganache, and MetaMask - Simulate basic transactions in a local blockchain (Ganache + MetaMask) - Demonstrate cryptographic primitives (Hashing, Merkle Trees) using simple JS or Python scripts.   | 4 Hours |

| Signature of | the BOS Chairman |  |
|--------------|------------------|--|
|              |                  |  |

| CMADE CONEDACTC AND DADE  | - T        |
|---|------------|
| SMART CONTRACTS AND DAPPS Smart Contract Basics -Solidity programming essentials: data types, control structures -                | 7 Hours    |
| Smart contract deployment: Hardhat and Truffle workflows - JSON-RPC model and   |            |
| provider mechanisms - Connecting smart contracts to frontend: Web3.js vs Ethers.js -  |            |
| Handling transactions and events from frontend - Introduction to wallet SDKs:   |            |
| MetaMask, WalletConnect   |            |
|   |            |
| Practical Component   |            |
| Write and deploy smart contracts using Solidity on Hardhat - Use Remix IDE for initial  | 4 Hours    |
| testing and debugging - Connect contract to frontend using Web3.js or Ethers.js, and handle wallet-based interactions (MetaMask). |            |
| DECENTRALIZED STORAGE AND INDEXING  |            |
| Using IPFS: node setup, pinning, gateways - Filecoin basics and decentralized storage   | 8 Hours    |
| economics - Uploading and fetching metadata with Web3.Storage - Cross-chain data  | o mours    |
| retrieval techniques - Challenges in decentralized data storage: Privacy, Redundancy,   |            |
| Speed   |            |
|   |            |
| Practical Component   |            |
| Upload and retrieve data using IPFS via Pinata or Web3.Storage - Display retrieved  | 4 Hours    |
| metadata on a simple frontend (HTML/JS) - Intro demo of indexing with The Graph   |            |
| (hosted playground; no deployment).   |            |
| DATA-DRIVEN BLOCKCHAIN APPLICATIONS   | 8 Hours    |
| Blockchain for Data Privacy: zk-SNARKs, zk-STARKs basics - Introduction to  |            |
| Decentralized Identity Systems (DID, SSI models) - Use of NFTs for asset tokenization   |            |
| in data marketplaces - Decentralized Autonomous Organizations (DAOs) for  |            |
| collaborative analytics - Legal and ethical considerations in blockchain-based data   |            |
| solutions - Real-world case studies: Healthcare, Finance, Supply Chain, Education   |            |
| Mini-Project Options:   |            |
| 1. NFT Marketplace - with smart contracts, file storage (IPFS), frontend  | 18 Hours   |
| (React/Web3.is), MetaMask login   | 10 110 415 |
| 2. Decentralized Voting App - with privacy logic (zk-SNARKs concept), basic   |            |
| UI, and event recording   |            |
| 3. <b>DID Demo</b> - setup identity (using tools like Ceramic or open-source SDKs) and  |            |
| access control  |            |
| 4. <b>Token-gated Learning App</b> - restrict content access using NFT/token verification   |            |
| Tool Options: Solidity, Hardhat, IPFS/Web3.Storage, MetaMask, React,  |            |
| Web3.js/Ethers.js, OpenZeppelin libraries, zk-demo kits   |            |

| Course  | Course Objectives:  |  |  |  |  |  |  |  |
|---------|---|--|--|--|--|--|--|--|
| The pur | pose of taking this course is to:   |  |  |  |  |  |  |  |
| 1       | Acquire knowledge of fundamental graph theory concepts, network data types, and key metrics used in social network analysis.                                    |  |  |  |  |  |  |  |
| 2       | Develop practical skills in collecting, processing, analyzing, and visualizing network data using standard Python libraries and visualization tools.            |  |  |  |  |  |  |  |
| 3       | Gain competency in interpreting network structures, identifying key actors and communities, and understanding basic network dynamics.                           |  |  |  |  |  |  |  |
| 4       | Understand the application of SNA techniques in various domains, particularly social media and organizational contexts, while considering ethical implications. |  |  |  |  |  |  |  |
| 5       | Develop the ability to critically evaluate network analysis results and communicate findings effectively through visualizations.                                |  |  |  |  |  |  |  |

| Cour    | rse Outcomes  |   |

|             |        |     |       |     |

| Course Content  |         |
|---|---------|
| Foundations of Social Network Analysis  | 6 Hours |
| SNA Overview - Advanced applications in social media, epidemiology, organizational networks - Graph Theory - Directed/undirected graphs, weighted graphs, multiplex networks, temporal networks - Network Data - Multi-modal data, big data challenges, API-based data collection -Twitter, LinkedIn - Ethical Frameworks - Privacy, bias, fairness in network data analysis. |         |
| Practical Component:  |         |
| Create/analyze multiplex and temporal graphs using NetworkX - Collect network data using Twitter/LinkedIn APIs -Tweepy, python-linkedin - Model a multi-layer social media network.   | 6 Hours |
| Network Metrics and Statistical Analysis  | 6 Hours |
| Centrality Measures - Katz centrality, PageRank, hub/authority scores - Statistical Properties - Homophily, assortativity, modularity, network autocorrelation Moran's I, Geary's C - P1/P* Models - Predicting dyadic relations using Exponential Random Graph Models (ERGMs) - Tools - Python NetworkX, igraph, R-statnet, sna.   |         |
| Practical Component:  |         |
| Compute Katz centrality and PageRank using NetworkX/igraph - Implement ERGMs using R statnet to model network ties - Analyze homophily in an organizational network.  | 6 Hours |
| Community Detection and Network Clustering  | 6 Hours |
| Advanced Community Detection - Spectral clustering, stochastic block models, overlapping communities - Modularity Optimization - Louvain, Infomap, hierarchical clustering - Evaluation Metrics - Normalized mutual information, adjusted Rand index - Visualization - Advanced Gephi layouts- Force Atlas 2, OpenOrd, Python - Matplotlib, Seaborn.                          |         |
| Practical Component:  |         |
| Apply spectral clustering and evaluate with normalized mutual information - Detect communities in a social media dataset - Visualize communities using Gephi and Python.  | 6 Hours |
| Dynamic Networks and Machine Learning   | 6 Hours |
| Network Dynamics - Temporal network models, preferential attachment, network evolution - Diffusion Models - Epidemic models -SIR, SEIR-, information cascades, threshold models - Machine Learning - Graph Neural Networks (GNNs), node embedding -Node2Vec, DeepWalk - Link Prediction - Graph convolutional networks, temporal link prediction.                             |         |
| Practical Component:  |         |
| Model/visualize temporal networks using Python -teneto - Simulate SIR diffusion on networks using NetworkX - Implement Node2Vec for node embeddings - Build a GNN for node classification using PyTorch Geometric.  | 6 Hours |

#### **Module 5: Applications, Ethics, and Research Communication**

6 Hours

Advanced Applications - Social media analytics, organizational influence, epidemiological modeling - Ethical Considerations - Bias in algorithms, data privacy, societal impact - Research Communication - Designing research papers, advanced visualizations, stakeholder presentations - Case Studies - Misinformation spread, supply chain networks.

#### **Practical Component:**

Analyze misinformation spread in a social media network - Evaluate ethical implications of SNA in a dataset - Create interactive visualizations using Gephi with temporal/multiplex data

6 Hours

- Draft a research paper and deliver a visualized presentation.

| Theory |           | Tutorial | Practical | Project  | Total     |  |

| Cour  | se Objectives:  |
|-------|---|
| The p | urpose of taking this course is to:   |
| 1     | Master advanced geospatial concepts, data structures, spatial statistics, and geostatistical methods necessary for complex analysis.  |
| 2     | Develop expertise in processing, analyzing, and modeling complex geospatial data using advanced Python libraries, spatial databases, and GIS integrations.                              |
| 3     | Critically evaluate and apply sophisticated spatial analysis, machine learning, and deep learning techniques to address complex, real-world geospatial problems and research questions. |
| 4     | Design, implement, and rigorously evaluate robust and innovative geospatial data science workflows, considering scalability, efficiency, uncertainty, and ethical implications.         |
| 5     | Independently investigate geospatial problems and effectively communicate advanced analytical findings and solution designs through substantial technical reports and visualizations.   |

| Cours    | Course Outcomes   |   |  |  |  |
|----------|---|---|--|--|--|
| After si | uccessful completion of this course, the students shall be able to  | Revised Bloom's<br>Taxonomy<br>Levels (RBT) |  |  |  |
| CO1      | Apply advanced geospatial data processing and management techniques for complex vector, raster, and spatio-temporal datasets using specialized libraries and spatial databases.   |   |  |  |  |
| CO2      | Apply advanced spatial statistical and geostatistical methods to model complex spatial dependencies and perform robust interpolation/ prediction.   | Ap  |  |  |  |
| CO3      | Analyze integrated geospatial data science workflows by examining the incorporation of advanced GIS functionalities, spatial feature engineering, and the selection of appropriate ML/DL model architectures for specific problem contexts. | An  |  |  |  |
| CO4      | Analyze the performance, limitations, spatial considerations, and uncertainty of advanced ML/DL models when applied to complex geospatial problems  | An  |  |  |  |
| CO5      | Analyze the effectiveness, ethical considerations, and potential for innovation in geospatial solutions by examining complex case studies and assessing communication through technical reports   | An  |  |  |  |

| Course Content  |         |  |  |
|---|---------|--|--|
| Advanced Geospatial Data Foundations  | 6 Hours |  |  |
| Review of Core Concepts Vector/Raster, CRS- Advanced Projection Theory & Transformations - Spatial Data Structures -Quadtrees, R-Trees, Grids - Topology Rules and Validation - Spatial Databases (PostGIS/SpatiaLite): Architecture, Data Types, Indexing - GiST, SP-GiST - Handling Large Geospatial Datasets -Chunking, Parallel I/O concepts.                                       |         |  |  |
| Practical Component:  |         |  |  |
| Setting up and querying spatial databases (PostGIS)-Implementing advanced geometric operations and topology checks using libraries like Shapely/GEOS- Working with spatial indexes in PostGIS. Processing moderately large vector datasets.   | 6 Hours |  |  |
| Advanced Spatial Analysis & Geostatistics   | 6 Hours |  |  |
| Advanced Point Pattern Analysis -Ripley's K, G-function - Spatial Autocorrelation Deep Dive -LISA, Geary's C, Moran Scatterplot - Geographically Weighted Regression (GWR) - Spatio-temporal Data Structures and Analysis Concepts - Geostatistics: Variogram Modeling (Advanced), Kriging Variants -Universal, Co- Kriging, Indicator Kriging, Introduction to Bayesian Geostatistics. |         |  |  |
| Practical Component:  |         |  |  |
| Compute and interpret Local Moran's I -LISA-using PySAL or similar.  Implement Geographically Weighted Regression (GWR) using relevant libraries. Perform advanced Kriging interpolation and compare results with basic methods. Analyze simple spatio-temporal patterns.   | 6 Hours |  |  |

| Geospatial Machine Learning  | 6 Hours |
|--|---------|
| Handling Spatial Autocorrelation in ML Models -Spatial Lag/Error Models - SAR, SEM - Advanced Spatial Feature Engineering -Network-based features, Complex landscape metrics, multi-scale features - Applying ML to Geospatial Tasks -Land Use Classification, Object Detection from imagery - using standard ML. Introduction to Spatial Cross-Validation Techniques. Addressing scale and Modifiable Areal Unit Problem (MAUP).  |         |
| Practical Component:   |         |
| Implement spatial feature engineering techniques-Apply spatial regression models to account for spatial dependence-Perform spatial cross-validation and compare results with standard CV.  | 6 Hours |
| Geospatial Deep Learning   | 6 Hours |
| CNNs for Geospatial Raster Data: Applications - Semantic Segmentation, Object Detection, Architectures - U-Net variants-, Transfer Learning with Geo-referenced imagery. RNNs/LSTMs/Transformers for Spatio-temporal Prediction - Graph Neural Networks (GNNs) for Geospatial Networks: Applications, Basic GNN architectures. Evaluating Geospatial DL Models: Spatial metrics, Handling class imbalance in spatial data. Model interpretability.   |         |
| Practical Component:   | 6 Hours |
| Apply a pre-trained CNN model -U-Net for land cover segmentation on satellite imagery using libraries like Rasterio and TensorFlow/PyTorch/fastaiUse libraries like pytorch_geometric or dgl to apply a basic GNN to a geospatial network dataset  |         |
| -Evaluate model performance using appropriate spatial metrics.   |         |
| Advanced Geovisualization, Evaluation & Research Context   | 6 Hours |
| Advanced Visualization Techniques: 3D Visualization, Spatio-temporal animations, Visualizing Uncertainty, Web mapping libraries- Evaluating Complex Geospatial Solutions: Frameworks for assessment, Uncertainty analysis, Scalability and performance testing. Ethical Considerations Revisited: Fairness, Accountability, Transparency in Geospatial AI -FATE-GeoAI. Locational privacy techniques - aggregation, obfuscation. Research Frontiers and Case Studies: Analyzing current research papers, Critiquing existing solutions, Identifying open problems. Technical report structure for geospatial analysis. |         |
| Practical Component  |         |
| Create advanced interactive web maps visualizing complex spatial or spatio- temporal dataImplement methods to visualize uncertainty associated with spatial predictions-Critically analyze and present findings from recent geospatial data science research paper-Develop a proposal/report outline for tackling a complex geospatial problem discussed in case studies.  | 6 Hours |

| Course   | Objectives:   | The purpose of taking this course is to: |
|--|---|--|
| 1 Understand the core differences between Gamification and Games.                        |   |  |
| 2  | Explore how gamification drives innovation in business. |  |
| 3 Analyse the effectiveness of gamification in Advocacy, Media, Politics, and Education. |   |  |
| 4  | Identify the risks ar                                   | nd future trends in gamification.        |

| Course Outcomes: |   | After successful completion of this course, the students shall be able to | Revised Bloom's<br>Taxonomy Level<br>(RBT) |
|------------------|---|---|--|
| CO 1             | Acquire in-depth knowledge of gamification principles and identify specific applications across various contexts. |   | U  |
| CO 2             | Develop a comprehensive conceptual framework for gamification tailored to different sectors.                      |   | С  |
| CO 3             | Critically analyse and evaluate the benefits and risks associated with gamification.                              |   | Е  |
| CO 4             | Analyse the role of the game market.  | of motivation in gamification and how it drives innovation in             | An   |

| Module  | Hours |
|---|-------|
| GAMIFICATION  | 9     |
| Core concepts, distinctions between gamification and games, Motivation in Gamification,         |       |
| Gamification drive Innovation, Game Market.   |       |
| GAMIFICATION IN BUSINESS  | 8     |
| Business sector adopts gamification techniques -Case studies, features of gamification in       |       |
| business, marketing strategies.   |       |
| GAMIFICATION FOR ADVOCACY AND MEDIA   | 10    |
| Applications in civil society, differences from business gamification, effectiveness in raising |       |
| awareness, media outlets adopt gamification techniques, features of gamification in media,      |       |
| journalism and communication benefiting from gamification.                                      |       |
| GAMIFICATION IN POLITICS AND EDUCATION  | 10    |
| Political gamification, effectiveness for political campaigns, differences from other sectors,  |       |
| gamification effective for policymaking. Educational applications, effectiveness in teaching    |       |
| and learning.   |       |
| RISKS AND FUTURE IN GAMIFICATION  | 8     |
| Gamification desirability, Social and mental sickness, features of gamification in social       |       |
| networks, need of gamers-Future with games.   |       |
