# KUMARAGURU COLLEGE OF TECHNOLOGY,

An autonomous Institution affiliated to Anna University, Chennai **COIMBATORE – 641 049.** 

# B.E MECHATRONICS ENGINEERING CURRICULUM AND SYLLABUS 2024 BATCH ONWARDS

I to IV SEMESTERS

#### **VISION**

To achieve excellence in academic and industrial automation research and innovative product development driven by mechatronics systems

## **MISSION**

- Impart the right blend of knowledge and skills to students and enable them to apply it in real life situations.
- Motivate the students towards interdisciplinary research to cater to the local and global needs.
- Achieve innovation in developing industrial products with social responsibility

# PROGRAM SPECIFIC OBJECTIVES (PSOs)

The Program Specific Objectives of Mechatronics Engineering Program are to prepare the graduates:

- **PSO1:** Design and develop Mechatronics systems to solve the complex engineering problem by integrating electronics, mechanical and computing systems.
- **PSO2:** To analyze and provide solution for the real time engineering problems related to instrumentation, control, automation, and robotics.

# PROGRAM OUTCOMES (POs) (as per New NBA document)

Graduates of the Mechatronics Engineering Undergraduate Program should have the ability to:

- **PO1:** Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.
- **PO2: Problem Analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)
- **PO3: Design/Development of Solutions:** Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)

- **PO4: Conduct Investigations of Complex Problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
- **PO5: Engineering Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
- **PO6:** The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
- **PO7: Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
- **PO8: Individual and Collaborative Team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
- **PO9: Communication:** Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
- **PO10: Project Management and Finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
- PO11: Life-Long Learning: Recognize the need for and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

# PROGRAM EDUCATIONAL OBJECTIVES(PEOs)

PEO1	Graduates will design and develop innovative, sustainable products by applying multidisciplinary engineering knowledge
PEO2	Graduates will identify, analyze, and solve complex engineering problems using fundamental concepts of mechatronics, while continuously engaging in lifelong learning.
PEO3	Graduates will pursue higher education or careers in multicultural and international environments, demonstrating proficiency in both oral and written communication.
PEO4	Graduates will assume leadership roles and contribute effectively to team-based projects, demonstrating a strong sense of professional ethics and social responsibility

# **KUMARAGURU COLLEGE OF TECHNOLOGY**

tech batt Hyb Sup Hyb Fue cells fuel <b>Pra</b>	Course Content  ADVANCED ELECTROCHEMICAL ENERGY SYSTEMS Introduction to electrochemistry for energy systems - Advanced battery technologies (Li-ion batteries, Sodium-ion batteries, Al – air Battery, Zn - air batteries) - Comparison of battery technologies and its challenges. Hybrid energy storage systems: Super-capacitors: Electric double-layer capacitors (EDLCs) - Pseudo capacitors - Hybrid supercapacitors Fuel cells: Principles and recent advancements of Proton exchange membrane fuel cells (PEMFCs) - Solid oxide fuel cells (SOFCs) - Microbial fuel cells - Regenerative fuel cells.  Practical Component:  • Compare the Conductivity of different electrolytes in battery systems. • Determination of electrical conductivity in electroplated metal coating on substrate. • Determination of electrode potentials of the cell and construct feasible cell. • Estimation of mixture of acids using strong base by Conductometric													
titrations.  ORGANIC MATERIALS FOR ELECTRONIC APPLICATIONS Introduction to polymers - Classification - Functionality - Degree of Polymerization. Polymerization: Addition polymerization and its Mechanism (Free Radical, Cationic, and Anionic) - Condensation polymerization - Copolymerization Conducting materials: Small molecule conductors (Pentacenes and their derivatives) - Engineered Pentacenes and Reversible functionalization - Synthesis and doping of conducting polymers (Polyacetylene and Polythiophene) - Applications of conducting materials in devices (Organic light-emitting diodes (OLEDs), Organic photovoltaics, Flexible and printed electronics)  Practical Component:												9 Ho 3 Ho		
												-		

and breakdown) - Preparation, properties, and uses of Solid inorganic (Mica and Porcelain) and organic insulators (Bakelite and Rubber) - Liquid insulators (Epoxy resin and Transformer oil) – Gas Insulator (Sulfur hexafluoride) High Electrical resistivity materials: Factors influencing electrical resistivity - High resistivity materials (Composition, properties, and applications of Manganin and Molybdenum disilicide) - Nanocomposite insulators  Practical Component:	9 Hours
Determination of pH and Conductivity in different Transformer Oils	3 Hours
NANOMATERIALS AND NANOELECTRONICS	
Introduction to nano chemistry - Distinction between molecules, nanoparticles, and bulk materials - Size-dependent properties of nanomaterials - Quantum confinement effects - Carbon nanotubes and graphene (Preparation by Chemical Vapor Deposition and Laser Ablation, Properties and Applications in electronics) -	9 Hours
Nanowires (Preparation by Electrochemical Deposition and Electrospinning, Properties and Applications in electronics) – Nanoparticles, nanoclusters, and nanorods (Preparation by Sol-gel, Solvothermal, Properties and Applications in	
electronics) - Nanotubes and nanowires in sensing applications.	
Practical Component:	
Synthesis of Nanoparticle using Solvo-Thermal Method	3 Hours
Introduction to sustainable electronics (Importance and Environmental challenges in the electronics industry) - Environmental impact (Conductors, semiconductors, and polymers), Toxicity and persistence of electronic materials - Green chemistry principles in electronics manufacturing (12 principles of green chemistry applied to electronics and Eco-friendly materials and processes) - Life cycle assessment of electronic products - Recycling and e-waste management strategies (Recovery,	9 Hours
Challenges and innovations in electronics recycling) - Future trends in eco-friendly electronic materials.	
Practical Component:	
<ul> <li>Determination of Copper from electronic waste by Complexometric method.</li> <li>Estimation of copper ion by spectrophotometry.</li> <li>Estimation of strength of sulphuric acid in spent Battery Electrolytes by pH metry</li> </ul>	9 Hours
Theory Tutorial Practical Project	Гotal

hyperbola by eccentricity method only. Orthographic projection of points.  Construction of cycloid — Construction of spirals - Construction of involutes of square and circle.  6 Hours
square and circle. 6 Hours
Dec. the Character of a condition has been a
Drawing of tangents and normal to the above curves.
Projections of straight lines located in first quadrant - determination of true length
and true inclinations.
Projections of plane surfaces - polygonal lamina and circular lamina, located in the
first quadrant and inclined to one reference plane.
ROJECTION AND SECTION OF SOLIDS 6 Hours
Projection of simple solids - prism, pyramid, cylinder and cone. Drawing views when
the axis of the solid is inclined to one reference plane.
Sectioning of simple solids - prisms, pyramids, cylinder and cone. Obtaining sectional
views and true shape when the axis of the solid is vertical and cutting plane inclined 6 Hours
to one reference plane.
EVELOPMENT OF SURFACES, ISOMETRIC PROJECTIONS 6 Hours
Development of lateral surfaces of truncated prisms, pyramids, cylinders and cones.
• Isometric projection, Isometric scale, Isometric views of simple solids, truncated
prisms, pyramids, cylinders and cones.  6 Hours
EE-HAND SKHING AND INTRODUCTION TO AUTOCAD  6 Hours
• Free hand skhing techniques, skhing of orthographic views from given pictorial
views of objects, including free-hand dimensioning. Free hand skhing of isometric views from orthographic views.
• Introduction to Drafting Software (AutoCAD) & its Basic Commands. Introduction  6 Hours
to coordinate systems, object selection methods, selection of units and Precision.
Annotation and dimensions, Object properties.
RAWING ORGANIZATION AND HOUSE PROJECT 6 Hours
toCAD - Skhing – line, circle, arc, polygon, rectangle and ellipse. Working with object
aps, layers and object properties. Editing the objects – copy, move, trim, extend, <b>6 Hours</b>
orking with arrays, mirror, scale, hatch, fillet and chamfer. Isometric views of simple
lid blocks.

CIRCUIT THEORY	
Network Theorems: Kirchhoff's laws – Thevenin's theorem - Norton's theorem -	O House
Superposition theorem – Maximum power transfer theorem – Nodal and Mesh	9 Hours
Analysis.	
DIODES AND ITS APPLICATIONS	
PN junction Diode - Zener Diode Structure, Operation and VI Characteristics -	
Applications of Diode: Clippers and Clampers - Half Wave & Full Wave Rectifiers –	9 Hours
Zener voltage regulator - Regulator Design: Case Study - Schottky Diodes - LEDs	
and Photo diodes -Introduction to Memristors.	
BJT AND MOSFET	
BJT - Transistor Currents - Transistor Characteristics - CE and CB configuration -	
Biasing of a transistor; fixed bias, self-bias. MOSFET - Enhancement and Depletion	9 Hours
Modes - Regions of Operation- MOSFET Characteristics - BJT and MOSFET as a	
switch.	
AMPLIFIERS AND OSCILLATORS	9 Hours
Common Emitter configuration - h parameter model for low frequencies – Small	
signal amplifiers - cascading amplifiers, differential amplifier - Oscillators -	
Barkhausen stability criterion - Hartley oscillators and Colpitts oscillators.	
OPERATIONAL AMPLIFIERS	
Ideal characteristics – Inverting, Non-inverting – summer – Comparator,	O House
Integrator, differentiator – Schmitt trigger – R.C. Phase shift oscillator, Wein Bridge	9 Hours
Oscillator – Astable multivibrator.

INTRODUCTION TO OPEN-SOURCE TOOLS AND TECHNIQUES  Explore the concept of open-source, its underlying principles and its contrast with proprietary software, Discuss the advantages of using open-source tools, such as lower costs, increased innovation, educational value, and community support, walk through to the commonly used open-source tools for electronics design (KiCad, FreeCAD), software development (Python, Eclipse), and fabrication (Cura, LinuxCNC).															
ELE	CTRO	NICS F	UNDAN	MENTA	LS AN	D T00	LS							6 Ho	ırs

Introduction to basic electronic components (resistors, capacitors, transistors, .), Understanding of electronic circuits and their functions, Hands-on practice with CircuitJS and Falstad, Simulating and analysing electronic circuits, Introduction to Arduino and Raspberry Pi, exploring their capabilities and applications, Designing PCBs using KiCad and EasyEDA, Understanding PCB fabrication processes	
SOFTWARE PROTOTYPING AND TOOLS  Benefits of rapid prototyping in product development, Iterative design and testing, Wireframing tools (Balsamiq, Figma), UI design tools (Skh, Figma), Programming languages (Python, JavaScript), Testing frameworks (Selenium), No-code platforms (Bubble, Adalo, Wix, AppGyver), Building functional prototypes without extensive coding	6 Hours
FABRICATION AND PROTOTYPING  Overview of fabrication techniques (3D printing, laser cutting, CNC machining), Prototyping methods for physical products, using tools like Blender, TinkerCAD, or Fusion 360, Creating 3D models for physical prototypes, Hands-on experience with laser cutting and engraving, Understanding their applications and limitations	7 Hours
SIMULATION & DEMONSTRATION Integrated project demonstration, explaining the design process, technical choices, and outcomes, simulation showcase to demonstrate their understanding of various technical tools and prototyping techniques	8 Hours

Course Outcomes (CO)	Engineering	Problem Analysis Design/Development of Solutions	Conduct Investigations of Complex Problems	Engineering Tool Usage	The Engineer and The World	Ethics	Individual and Collaborative Team	Communication	Project Management and Finance	Life-Long Learning	PSO-1	PS0-2	1	
1	1	2			2		2			1				
2	1				_		2			1				
3	1	2			2		1			1				
Course Content														
Introduction to Problem Solving and Ground Rules Introduction to problem-solving strategies without mentioning Design Thinking- Emphasize problem-solving attitudes, mindsets, and behaviours necessary for iterative problem solving (e.g., openness to failure, patience, empathy)-Set ground rules for the course, including incentives for creative risk-taking and penalties for  6 Hours														

non-participation or lack of reflection-Overview of the Design Thinking process and	
its importance.	
Empathy and Problem Definition	
Techniques for understanding user needs, including observation, interviews,	C 11
surveys and focus groups-Importance of secondary research as a complement for	6 Hours
the above-mentioned methods-Introduction to empathy cycles: involve students in	
two empathy cycles before and after problem definition-Finetuning problem definition based on user insights.	
Ideation and Concept Modelling	
Brainstorming ideas and selecting feasible solution-Creating concept modelling to	
visualize ideas-Include an empathy cycle after students propose solutions, allowing	6 Hours
them to revisit and reshape their solutions based on further insights from users.	o nours
Prototyping and Testing with Models	
Building basic prototypes using simple materials (e.g., cardboard, clay)-	
Introduction to different prototyping methods (e.g., <b>low-fidelity</b> vs <b>high-fidelity</b>	6 Hours
<b>models</b> ) for different contexts: product design, space design, policy, and digital/e-	
commerce solutions-Conduct an empathy cycle after the prototype is developed to	
gather user feedback and refine the prototype.	
Iteration and Final Modelling Project	
Students refine their prototypes based on feedback from the empathy cycle-Finalize	6 Hours
prototypes for presentation based on consistent feedback loops.	
Presentation, Reflection, and Learning Summaries	
Students present their final projects and reflect on their learning journeys, including	
how their understanding of problem-solving and empathy evolved during the	6 Hours
course- Learning Summary Activity: Each student presents their individual	
journey and learning outcomes from the empathy cycles and iterations-Peer review	
and group discussions.	
Theory Tutorial Practical Project	Total

Practical Component / Roleplays Dynamics	6 Hours
Introduction to Role play - Benefits of role plays - Importance of gesture, tone	
and modulation-Skill development through role play activities - Types of role plays -	
Conversation Building through communicative functions-Initiating a dialogue- Framing	
questions- Receiving feedback.	
Practical Component /Roleplays on Social Skill	6 Hours
Social Interactions: - (Ordering food at a restaurant- Making a reservation at a hotelShopping at a store Attending a party or social gathering). Travel and Tourism: (Asking for directions- Booking a flight or hotel Exploring a new city- Interacting with local people). Community and Volunteering: (Participating in a charity event- Volunteering at a local organization- Discussing community issues- Organizing a community project)	
Practical Component / Roleplays on Education and Technology	6 Hours
Education and Personal Growth: (Setting goals-(Short term & Long term)- Creating a study plan- Participating in a workshop- Reflecting on personal growth) Technology and Online Interactions: (Participating in an online meeting- Creating a social media post- Writing an email or text message- Making an online purchase). Technology and Science: (Explaining a scientific concept- Discussing emerging technologies- participating in Hackathons-Presenting a research paper)	
Practical Component / Roleplays on Strategic Insights	6 Hours
Critical Thinking:(Evaluating a news article-solving a moral dilemma-Decision with	
incomplete information-Assessing a historical event).Problem-Solving:(Resolving a	
conflict- Negotiating a deal - Making a complaint- Apologizing for a mistake). Business	
and Entrepreneurship:(Pitching an idea- Negotiating a contract- Conducting a market	
Research- Presenting a product launch)	<i>(</i> II
Practical Component / Roleplays on Cultural Exchange	6 Hours
Cultural Exchange:(Sharing customs and traditions- Discussing cultural differences-	
Exploring historical events- Participating in a cultural festival)	
Media and Entertainment: (Event planning- Creating an advertisement-Digital Marketing-	
Conducting interviews- Creating news broadcast- Writing and Performing a script-	
Enacting one act plays). Arts and Culture:(Visiting an art gallery - Attending/ organizing a concert or play - Discussing literature- Creating a piece of art)	
Theory Hours: Tutorial Hours: Practical Hours: 30 Project Hours:	Total
Theory Hours. Theorem Hours. Or Hogeet Hours.	Hours: 3

6 3 1 2								
Course Content  PARTIAL DIFFERENTIAL EQUATIONS Solution of PDE by direct integration - solution of standard types of first order partial differential equations (excluding reducible to standard types) - Lagrange's linear equation - Linear homogeneous partial differential equations of second order with constant coefficients.  FOURIER SERIES Dirichlet's conditions - Fourier series - Odd and Even functions - Half range sine series - Half range cosine series - Parseval's identity - Harmonic Analysis.  BOUNDARY VALUE PROBLEMS - ONE DIMENSIONAL EQUATIONS Classification of second order quasi linear partial differential equations - Solution of one-dimensional wave equation - Solution of one-dimensional heat equation (excluding insulated ends) - (Cartesian coordinates only).  BOUNDARY VALUE PROBLEMS - TWO DIMENSIONAL EQUATIONS  4 + 1 Hours								
Steady state solution of two-dimensional heat equation in infinite plate (Insulated edges excluded) – (Cartesian coordinates only)  FOURIER TRANSFORM Statement of Fourier integral theorem – Infinite Fourier transforms – Sine and Cosine Transforms – Properties (Proofs excluded) – Transforms of simple functions – Convolution theorem – Parseval's identity.  Z-TRANSFORM Z-transform - Properties (Proofs excluded) – Convolution theorem – Inverse Z – transform (by using partial fractions, residues and convolution theorem) – Solution of difference equations using Z - transform.

Cour	Course Objectives:					
The p	The purpose of taking this course is to:					
1	Introduce the concept and significance of value education in shaping a meaningful and fulfilling life.					
2	Enable students to understand the human being as a co-existence of self and body and the harmony within.					
3	Develop an understanding of harmony in relationships, family, and society.					
4	Help students appreciate the interconnectedness and harmony in nature and existence.					
5	Instill the importance of ethical behavior in personal, professional, and social contexts.					

Course Outcomes				
After	successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)	
CO1	Understand the foundational concepts of value education and human aspiration	S.	U	
CO2	Analyse the human being as a holistic entity comprising self and body.		An	
CO3	Evaluate and cultivate harmonious relationships within the family and society.		Е	
CO4	Interpret the interconnectedness in nature and recognize harmony in existence.		U	
CO5	Apply holistic understanding to professional ethics and sustainable living.		Ap

DIGITAL FUNDAMENTALS	9 Hours								
Review of Number Systems: Binary, Octal, Hexadecimal, BCD, Gray code, Excess 3	, mours								
code -Binary arithmetic: 1's complement, 2's complement, and Code conversions -									
Boolean algebra: Basic Postulates and theorems, Canonical forms, Logic gates-									
Simplification using K- maps and Implementation using logic gates.									
	0.11								
COMBINATIONAL CIRCUITS	9 Hours								
Problem formulation and design of combinational circuits: adder, subtractor,									
Parallel adder / Subtractor, Carry look ahead adder, Magnitude Comparator, Code									
converters, Encoder, Decoder, Multiplexer, Demultiplexer. Function realization									
using decoders and multiplexers.	0.11								
SYNCHRONOUS SEQUENTIAL CIRCUITS	9 Hours								
General model of sequential circuits: Latch, Flip Flops, Level triggering, Edge									
triggering, Master slave configuration - Realization of one flip flop using other flip									
flop- Shift Registers-Counters: Binary counters, Modulo-n counter, Decade, Counter,									
Ring counter and Johnson counter.									
PROGRAMMABLE LOGIC DEVICES	6 Hours								
Introduction to Programmability Logic Devices: PROM - PLA -PAL-CPLD-FPGA,									
Implementation of combinational logic circuits using PROM, PLA.									
Case Study: Application of AI in Digital Logic Design.									
INTRODUCTION TO MICROCONTROLLER	12 Hours								
Overview of microprocessors, comparison of microprocessors and microcontrollers									
- 8051 Microcontroller: Architecture, Memory organization, Timers and counters									
Interrupts, Addressing modes, Instruction Set, Programming in assembly language.									
Theory 45 Tutorial 0 Practical 0 Project 0 To	otal 45								
Hours: Hours: Hours: Hours:	ours:

#### **Course Content**

<u>Course Content</u>	
FLUID PROPERTIES AND FLUID STATICS Fluid-definition, distinction between solid and fluid-Units and dimensions—Properties of fluids density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapor pressure, capillary and surface tension. Fluid statics: Pascal law - Hydrostatic law - Pressure measurements using Manometers and pressure gauges.	12 Hours
FLUID KINEMATICS AND FLUID DYNAMICS Fluid Kinematics – Types of flow - velocity and acceleration - continuity equation. Fluid dynamics - equations of motion - Euler's equation along streamline - Bernoulli's equation – Applications – Venturi meter, Orifice meter, Pitot tube.	12 Hours
FLUID FLOW THROUGH PIPES  Hagen Poiseuille Equation - Darcy Weisbach equation - Friction factor — Major and minor energy losses - Flow through pipes in series and in parallel.  Case Studies:  Hydraulic Circuit Design in Industrial Automation, Fire Fighting System Design for High-Rise Buildings, Irrigation System Efficiency in Agricultural Engineering	12 Hours
BASIC CONCEPTS AND FIRST LAW OF THERMODYNAMICS  Thermodynamic system, properties, process, cycle - Zeroth law and temperature measurement – internal energy, enthalpy, specific heat capacities. First law of thermodynamics – application to closed and open systems – Steady Flow Energy Equation – Simple problems.	12 Hours
SECOND LAW OF THERMODYANAMICS  Second Law of thermodynamics – Kelvin Planck and Clausius Statements – Equivalents of Kelvin Planck and Clausius statements. Reversibility – Irreversibility, reversible cycle – Heat Engine, heat pump and refrigerator. Carnot cycle – Simple problems.	12 Hours

Generate Minimum Usable Prototype (MUP) concepts that address the identified challenge that	
provide high value, evaluate the potential of each solution concept based on criteria like	
feasibility, viability, and desirability	
OPTIMIZATION AND PLANNING PRACTICAL COMPONENT:	06 Hours
Create Bill of Quantities (BOQ) and Bill of Materials (BOM) to estimate costs and resources,	
Develop a comprehensive innovation proposal outlining the innovation concept, goals, and	
benefits, Implement Lean principles to improve efficiency and reduce waste in the innovation	
process, Reflect on the activities to identify areas for improvement and learning.	
PROJECT PRESENTATION	04 Hours
Develop and deliver a compelling presentation of your minimum usable prototype (MUP) and	
innovation solution to effectively communicate its value and impact to a broader audience. Create	
a visually engaging presentation that clearly outlines the problem, the proposed solution, and the	
value of your minimum usable prototype. Utilise tools such as slides, infographics, and videos to	
enhance the visual appeal. Craft a compelling story around your innovation. Highlight the journey	
from problem identification to solution development, emphasising key insights and milestones.

Course Content NATURAL RESOURCES		
Introduction to Natural resources: Types, significance, and conservation strategies	3 Hou	ırs
<b>Water resources:</b> Utilization, management practices, and conservation strategies -		
rainwater harvesting methods.– Water distribution system audit		
<b>Food resources:</b> Challenges of food security in India - impact of modern agriculture, and		
environmental concerns related to fertilizers and pesticides.		
Practical Component:		
Parameter Testing : Water / Effluent / Soil/Fertiliser		
	10 Ho	urc
Online Course	10 110	uis
ECOSYSTEM AND BIODIVERSITY		
<b>Ecosystem:</b> Structure and function of an ecosystem - ecosystem resilience and adaptive	3 Hou	ırs
capacity		
<b>Biodiversity:</b> Values of biodiversity - Hot Spot of biodiversity (in the Himalayas, the		
Western Ghats, the Indo-Burma region, and the Gulf of Mannar) - Threats to biodiversity.		
<b>Conservation Strategies:</b> Emerging Issues in Biodiversity Conservation - Citizen science -		
In-situ and Ex-situ conservation of biodiversity.		
Practical Component:	6 Ho	ırs
Documentation of biodiversity in the campus		
ENVIRONMENTAL DEGRADATION AND MANAGEMENT	3 Ho	ırs
<b>Pollution</b> : Causes, effects and control measures of Air pollution, Water pollution - Role of		
an individual in prevention of pollution		
Waste management: Circular Economy vs. Linear Economy - Disposal of solid wastes -		
Treatment of Liquid wastes		
<b>Disaster Management</b> : Mitigation strategies and Readiness		
Practical Component:		
Waste Management and Resource recovery in Campus	<b>6 11</b>	
Documentation of Environmental Data Resources and Monitoring Tools.	6 Ho	ırs
LEGAL FRAMEWORK FOR ENVIRONMENTAL PROTECTION IN INDIA		
Global and National Initiatives: United Nations Sustainable Development Goals - Coastal	3 Ho	ırs
Regulation Zone - Environmental impact assessment		
Environmental Legislation in India: Key Legal and Regulatory Terminology in India –		
Valuation of Ecosystem Services and integration of Acts in the workplace - Plastic Waste		
Management Rules - E-Waste Management Rules - Environment Protection Act – Air		
(Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution)		
Act – Wildlife Protection Act – Forest Conservation Act		
Implementation Challenges: Issues involved in enforcement of environmental legislation		
Practical Component:	2 Hou	ırs
Online Course		

#### **ENERGY MANAGEMENT**

**Energy Resources:** Energy Demand and Urban energy Challenges - Necessity of alternate energy methods - Renewable and Non- renewable energy resources - Carbon footprint and carbon credit – Sustainable energy utilization – Case study Energy Audits – Purpose, methodology, and common instruments used

3 Hours

#### **Practical Component:**

Documentation of Energy usage through Carbon foot print calculation - Personal aswell as Institutional

6 Hours

Theory	Tutorial		Practical		Project		Total

#### Solve algebraic and transcendental equations where analytical solutions are impractical or impossible. 2 Develop the ability to solve engineering problems and other real-world applications using interpolation and integration methods for both data analysis and numerical solutions. Critically analyse the performance of different numerical methods in terms of accuracy, 3 stability, and computational efficiency for solving PDEs in practical engineering applications. Apply probability theory to model and solve real-world problems involving uncertainty, risk analysis, and decision-making in engineering, business, and science. Study and apply standard probability distributions, with emphasis on the Poisson and Normal distributions, including 5 their properties, applications, andparameter interpretation.

<u>Course Content</u>	
POWER SEMICONDUCTOR DEVICES	9 Hours
Thyristors - Volt-Ampere Characteristics - Switching Characteristics-Power MOSFET -	
Volt- Ampere Characteristics-witching Characteristics-PowerI GBT-Volt-Ampere	
Characteristics Switching Characteristics	
Practical Component:	
VI Characteristics of SCR, MOSFET, and IGBT	
<ul> <li>Design and Testing of Gate Driver and Snubber Circuit</li> </ul>	6 Hours
AC to DC CONVERTERS	9 Hours
Diode Rectifiers – Single phase Bridge – R, RL – Thyristor Converter – Single phase bridge –	) Hours
RL – Three phase fully controlled converter -R-RL Load.	
Practical Component:	
Single-Phase Fully Controlled Converter with R and RL Load	
Three-Phase Fully Controlled Converter	6 Hours
INVERTERS	9 Hours
Single-phase VSI – Half-bridge – Centre tapped inverter – Full bridge inverter -Three-phase	
VSI – Square-wave–Control of induction motor by voltage source inverter.	
Practical Component:	
<ul> <li>Speed control of PMDC motor using three phase fully controlled converter</li> </ul>	
DC Voltage control using DC – DC Converter	6 Hours
PWM TECHNIQUES	9 Hours
PWM Inverter – fundamental concepts of PWM – naturally sampled PWM - PWM analysis	
by duty cycle variation	
Practical Component:	
<ul> <li>Single-Phase Voltage Source Inverter with PWM Control</li> </ul>	6 Hours
Three-Phase Inverter for UPS Application	
DC- DC CONVERTER	9 Hours
DC Chopper - Step Down Converter - Step Up Converter -Buck Boost Converter -	
Introduction - Fly Back converter-speed control of PMDC motor.	
Practical Component:	6 Hours
<ul> <li>MOSFET based step-down and step up converter</li> </ul>	o nours
Simulation of DC-DC Converter for PV System	
Theory 45 Tutorial 0 Practical 30 Project 0 To	otal 75

Pre-requisite courses  The purpose of taking this course is to:  1 Recognize the different types of fluid power systems, including hydraulic and pneumatic systems, and their applications across industries.  2 Study the different control methods used in fluid power systems, including manual, electrical, and electronic control.  3 Apply best practices for fluid power system maintenance, including preventive maintenance techniques and fault diagnosis.  Course Outcomes  After successful completion of this course, the students shall be able to different pumps and actuators.  CO1 Apply the concept of fluid power to real-world scenarios by identifying its use in various industries.  CO2 Assess the performance of a hydraulic system by evaluating the efficiency and operation of different pumps and actuators.  CO3 Analyze the differences between the various hydraulic control valves and determine the most suitable valve for specific applications.  CO4 Evaluate the integration of pneumatic actuators in various industrial applications and determine their suitability based on system requirements.  CO5 Analyze fluid logic circuits and diagnose the common failure modes in fluid power systems, including hydraulic and pneumatic situations.  CO6 Design a simple fluid power system, considering the type of fluid, system components, and symbols for a specific application.  CO7 Design a simple fluid power system, considering the type of fluid, system components, and symbols for a specific application.  CO8 Design a simple fluid power system, considering the type of fluid, system components, and symbols for a specific application. Course Content	
FUNDAMENTALS OF FLUID POWER	6 Hours
Introduction to fluid power, Advantages of fluid power, Application of fluid power	Ollouis
system. Types of fluid power systems, Properties of hydraulic fluids – General types	
of fluids. Fluid power symbols.	
HYDRAULIC PUMPS AND ACTUATORS	10 Hours
Pumping theory – Pump classification – Gear pump, Vane Pump, piston pump,	To nours
construction and working of pumps – pump performance – Variable displacement	
pumps. Linear hydraulic actuators – Types of hydraulic cylinders–Single acting,	
Double acting special cylinders like tandem, Rodless, Telescopic - Construction and	
application. Cushioning mechanism, Rotary actuators - Gear, Vane and Piston motors	
- Selection of Pumps and actuators.	
Practical Component:	1 Hour
<ul> <li>Design of Hydraulic circuit to control the speed and direction of a hydraulic motor.</li> </ul>	
HYDRAULIC VALVES, ACCUMULATORS AND CIRCUITS	10 Hours
Directional control valve – 3/2-way valve – 4/2, 4/3 way valve – Shuttle valve – check	10 Hours
valve. Pressure control valves, Flow control valve – Fixed and adjustable, electrical	
control solenoid valves. Types of accumulators, Accumulators circuits, Intensifier –	
Circuit and Application, Speed control circuits, synchronizing circuit and industrial	
application circuits – copying circuit and press circuit.	
Practical Component:	
Design of Hydraulic circuit for sequential operation of two hydraulic	2 Hours
cylinders using pressure sequence valve.	
Study of the working of Counterbalance valve, Accumulator,	
Proportional control valve.	
PNEUMATIC SYSTEMS, COMPONENTS AND CIRCUITS	10 Hours
Properties of air – Compressors – Filter, Regulator, and Lubricator Unit – Air control	
valves, Quick exhaust valves and pneumatic actuators. Pneumo hydraulic circuit,	
Sequential circuit design for simple applications using cascade method, Karnaugh –	7 Hours
Veitch Mapping method.	7 110413
Practical Component:	
<ul> <li>Design of simple pneumatic circuit to control the direction and speed of</li> </ul>	
single acting/double acting cylinder using push button DCV/lever operated	
DCV and flow control valve.	
<ul> <li>Design of Pneumatic circuit using shuttle valve (OR function) and dual</li> </ul>	
pressure valve (AND function).	
• Design of Pneumatic circuit for automatic reciprocation of single pneumatic	
cylinder using pilot operated DCV and roller operated DCV.	
• Design of Pneumatic circuit for synchronization of multiple pneumatic	
cylinders.	
• Design of Pneumatic circuit for sequential operation of multiple pneumatic	
cylinders.	
Design of Pneumatic circuit for sequential operation of multiple pneumatic	
cylinders using Cascade method.	
FLUID LOGIC CONTROL SYSTEMS AND MAINTENANCE	9 Hours
Hydro Mechanical servo systems, Electro-hydraulic and Electro-pneumatic systems	
and proportional valves. Fluidic Logic and switching controls - PLC applications in	

fluid power control, Maintenance - Failure and trouble shooting in fluid power systems.

#### 5 Hours

#### Practical Component:

- Design of Electropneumatic circuit (Relay control) for automatic reciprocation of single pneumatic cylinder using solenoid operated DCV and magnetic sensors.
- Design of Electropneumatic circuit (Relay control) for synchronization of multiple pneumatic cylinders.
- Design of Electropneumatic circuit (Relay control) for sequential operation of multiple pneumatic cylinders.
- Design of Electropneumatic circuit for sequential operation of multiple cylinders using PLC.

Hack Time 2: Develop and refine a working prototype. Build a Minimum Usable Prototype	
(MUP) based on feedback and iteration.	

#### **Build the Minimum Usable Prototype (MUP)**

Hack Time 3: Enhance the prototype through iterative improvements. Utilise feedback from mentoring sessions to make targeted adjustments and refinements, optimising the prototype's functionality and design based on practical insights.

Hack Time 4: Develop the Minimum Usable Prototype (MUP). Build the final version of the MUP incorporating all iterative refinements. Ensure that it meets the defined criteria and is ready for comprehensive testing and presentation.

#### **Perfect Pitch and Product Showcase**

Hack Time 5: Conduct a final demonstration and technical testing of the prototype. Create a compelling pitch to articulate the value proposition and potential impact of the innovation, aimed at securing support or funding.

Pitch Presentation and MUP Demonstration: Students showcase their completed prototype through a comprehensive demonstration, highlighting its key features and functionalities to Industry experts, incubators and investors. They deliver a compelling pitch that clearly communicates the innovation's impact, market potential, and benefits. This presentation aims to effectively convey the value of the prototype, engage potential stakeholders, and secure support or funding opportunities.
