KUMARAGURU COLLEGE OF TECHNOLOGY,

B.E. COMPUTER SCIENCE AND ENGINEERING REGULATION 2024

I to IV Semesters (2025 Batch)

Department of Computer Science and Engineering

VISION

To evolve as a School of Computer Science with centers of excellence having international reputation to serve the changing needs of Indian industry and society.

MISSION

- Computer Science and Engineering department is committed to bring out career oriented graduates who are industry ready through innovative practices of teaching-learning process.
- To cultivate professional approach, strong ethical values and team spirit along with leadership qualities among the graduates by organizing workshops, seminars and conferences periodically. Association with professional bodies and invitation to external experts should help this.
- To contribute towards techno-economic and social development of the nation through quality human resource and encouraging entrepreneurship among the young graduates.

PROGRAM SPECIFIC OUTCOMES (PSOs)

The Program Specific Outcomes of Computer Science and Engineering Undergraduate Program are:

PSO 1: Proficiency in Software Engineering and System Design

Graduates will be able to design, develop, and optimize software solutions, applying core principles of computer science to build efficient, scalable, and secure systems

PSO 2: Competency in Emerging Technologies

Graduates will develop expertise in emerging technologies and specialized domains enabling them to Innovate and build advanced solutions meeting Industrial and societal needs.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

The Program Educational Objectives of the Undergraduate programme in Computer Science and Engineering are to:

- **PEO I.** Enable graduates to be successful in their chosen careers, by applying their continual learning of Computer Science and Engineering in their work and life situations.
- **PEO II.** Enable graduates of the program to continue to adopt latest technologies and be critical learners displaying creativity and demonstrate to be leaders.

PEO III. Prepare graduates of the program to be innovative product engineers catering to the requirements of the enterprises and society.

PROGRAM OUTCOMES (POs)

Graduates of the Computer Science and Engineering Undergraduate Program should have the ability to:

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization to develop to the solution of complex engineering problems.

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development.

PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required.

PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions.

PO5: Engineering Tool Usage: Create, select, and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems.

PO6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture, and environment.

PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws.

PO8: Individual and Collaborative Teamwork: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

PO10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Life-Long Learning: Recognize the need for and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

KUMARAGURU COLLEGE OF TECHNOLOGY

Cour	Course Objectives:						
The p	urpose of taking this course is to						
1	enhance students' abilities to communicate ideas effectively, both orally and in writing, by developing skills in organizing thoughts clearly and logically and expressing them through well-structured paragraphs and concise summaries.						
2	enable students to critically evaluate and synthesize information from multiple sources and utilize suitable writing techniques and formats to produce professional-quality content tailored to various contexts.						
3	foster active listening, critical reading, and reflective thinking, empowering students to create engaging, relevant, and informative content by applying effective communication strategies across diverse platforms.						

Cour	rse Outcomes	
After	successful completion of this course, the students shall be able to	Revised Bloom's Taxonomy Levels (RBT)
CO1	demonstrate proficiency in delivering ideas effectively, both in speaking and writing, with a deeper understanding of the content and the ability to convey complex ideas through well-structured paragraphs and summaries.	Ap
CO2	create and present original content by evaluating information from multiple sources and employing appropriate formats and writing strategies across various professional contexts.	С
СОЗ	produce engaging and informative content through active listening, reading, reflection, and effective communication skills.	Е

Course	Objectives:	The purpose of taking this course is to:					
1	Develop professional communication skills, including technical writing, public speaking, and collaborative discourse.						
2		Foster creativity and critical thinking by producing real-world academic and professional outputs such as book chapters, journal articles, and intellectual property.					
3	Instil awareness of sustainability and so	global and ethical communication practices, contributing to ocial impact.					
4	Enhance students' l	anguage fluency through project-based learning relevant to engineering					

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)			
CO 1	Analyze and apply effective communication techniques in professional contexts.					
CO 2	Collaborate in teams to design and execute language-based projects with real-world applications.					
CO 3		Develop critical thinking and problem-solving skills through research, analysis, and presentation of technical content.				
CO 4	Produce published articles, and copy	ble-quality written and spoken outputs, such as book chapters, journal righted content.	С

APPLIED LINEAR ALGEBRA AND CALCULUS

L T P J C
3 0 2 0 4
SDG 4,9

BS

(Common to CS, IT, AD)

Pre-requisite courses	_	Data Book / Code	
		book (If any)	<u>-</u>

Cour	Course Objectives:					
The p	ourpose of taking this course is to:					
1	understand and apply the concepts of eigenvalues, eigenvectors, and matrix transformations to solve real-world linear algebra problems relevant to computing and data sciences.					
2	develop proficiency in vector spaces, subspaces, and matrix decomposition techniques (LU and SVD) for effective analysis and solution of linear systems in engineering and data analytics.					
3	apply differentiation and integration techniques, including optimization and calculation of areas and volumes, to solve practical problems in engineering and computational contexts.					
4	master multivariate calculus concepts such as partial derivatives, Taylor series, and constrained optimization methods for applications in machine learning and data science algorithms.					
5	provide MATLAB techniques for solving first-order and higher-order ordinary differential equations to model and analyse dynamic systems in computing and engineering.					

Cours	Course Outcomes				
After	After successful completion of this course, the students shall be able to				
CO1	apply the concepts of eigenvalues and eigenvectors to diagonalize matrices and solve systems of linear equations in real-world applications.	Ap			
CO2	apply the concepts of vector spaces, subspaces and matrix decomposition techniques such as LU decomposition and Singular Value Decomposition to solve linear systems and reduce matrix complexity in data science and engineering problems.	Ap			
CO3	apply differentiation techniques to solve optimization problems including finding maxima and minima and use integration methods to compute arc lengths, areas between curves and volumes of solids for practical engineering and computational applications.	Ap			
CO4	apply multivariate calculus concepts such as partial derivatives and Taylor's series expansion to analyse and approximate multivariable functions for solving engineering and computational problems.	Ap			
CO5	analyse and solve constrained and unconstrained optimization problems using the Lagrange multiplier method and determine the maxima and minima of functions with two or more variables relevant to machine learning and data science applications.	An			
CO6	analyse methods for solving first-order and higher-order ordinary differential equations to model and analyse dynamic systems in engineering and computing, using appropriate solution techniques to address real-world problems.	An

Course Content	
MATRICES	
Eigenvalues and eigenvectors of a real matrix – Properties of eigenvalues and eigenvectors (Statement only) – Cayley Hamilton theorem (excluding proof) - Orthogonal matrices – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.	9 Hours
Practical Component	
Matrix operations like addition, subtraction, multiplication, inverse, rank and transpose, eigenvalues and eigenvectors of a given matrix and verify the diagonalization of the matrix.	6 Hours
Cayley-Hamilton theorem to find the characteristic equation of a matrix and verify that the matrix satisfies its own characteristic equation.	
VECTOR SPACES	
Vector spaces and subspaces over real space – Euclidean spaces - Linear independence and dependence - Basis and Dimension - Null spaces, column spaces and Linear transformations - LU decomposition method - Singular Value Decomposition method.	9 Hours
(No proofs of any theorems, only problems based on these topics)	
Practical Component	
Linearly independent and dependent vectors and Singular Value Decomposition. Curve Tracing, 3D and Surface plotting.	6 Hours
APPLICATIONS OF CALCULUS	
Differentiation: Mean Value Theorem-Maxima and Minima – Integration: Arc Length,	
Area between two curves, Area of a Surface of Revolution, Volume of solids	9 Hours
Practical Component	
First and second derivatives of a given function, area between two curves and the volume	
of a solid of revolution	6 Hours
Optimization problems in single variables.	JIJUIJ

FUNCTIONS OF SEVERAL VARIABLES	
Partial derivatives – Homogeneous functions and Euler's theorem –Total derivative –	
Taylor's series expansion - Maxima and minima of functions of two variables -	
Constrained maxima and minima: Lagrange's multiplier method with single constraints	9 Hours
- Jacobians	
Practical Component	
Computing partial derivatives of multivariable functions	6 Hours
Optimization problems in multiple variables	
ORDINARY DIFFERENTIAL EQUATIONS	
Solutions of first order linear ODE: Leibnitz equation and Bernoulli's equation – Linear,	
homogeneous differential equations of second and higher order with constant	9 Hours
coefficients.	
Practical Component	
Solution of first order ordinary differential equations.	6 Hours
Solution of second and higher order ordinary differential equations	
Theory Tutorial Practical Project	Total
Hours: 45 Hours: 0 Hours: 30 Hours: 0	Hours: 75

Course Content	
Applied optics Wave Behaviour in Optics: Reflection, Refraction, Interference, Diffraction and Polarization (qualitative) - Interaction of light and matter - Absorption - Spontaneous emission - Stimulated emission - Population inversion - CO2 laser - Semiconductor lasers - Applications - Laser Imaging and Holography- Laser gyroscopes- LiDAR- Introduction and importance of Fiber Optics Technology- Propagation mechanism of rays in an optical fibre, Meridional rays, Skew rays- Types of optical fibres - Application of Optical Fibers, Optical fibre Communication system with block diagram.	9 Hours
Practical Component • Semiconductor laser: a) Determination of wavelength of laser	
 b) Determination acceptance angle and numerical aperture of an optical fibre. c) Determination of particle size Spectrometer – Determination of wavelength of mercury source using grating 	6 Hours
Quantum physics	9 Hours
Introduction to Quantum Mechanics- Wave Particle duality- Heisenberg uncertainty principle- Wave function- Postulates of Quantum Mechanics- Schrodinger's Equations - Particle in a box- Eigen values and Eigen function- Quantum confinement – quantum wells, wires and dots – Quantum system for information processing - quantum states – classical bits – quantum bits or qubits –CNOT gate - multiple qubits – quantum gates – advantage of quantum computing over classical computing.	
Practical Component	
 Determination of band gap of a semiconductor Determination of efficiency of solar cell Determination of Planck's constant – Electroluminescence method 	6 Hours
Thermal Physics	
Transfer of heat energy – conduction, convection, and radiation – thermal expansion of solids and liquids – expansion joints – bimetallic strips – theory of heat conduction in solids –	9 Hours

rectilinear flow of heat – determination of thermal conductivity of a bad conductor - Lee's &	
Charlton's disc method - Thermal Insulation – classification and properties – heat exchangers	
- applications – Thermal Physics in Virtual Reality and Haptics.	
Practical Component	
Lee's Disc method: Determination of thermal conductivity of a bad conductor	
200 0 2 200 1120110 41 2 000 11111111111	6 Hours
Mechanics	o mours
Introduction to position vector, force vector and moment vector- 3-D representation of force	
	9 Hours
and couple- their moments about a point or line- Distributed-force systems- Free Body	9 Hours
diagram- Equilibrium of a body under 2D/3D force systems- Moment of inertia of plane areas;	
Perpendicular-axis and parallel axis theorems- Rectilinear and curvilinear motion of a	
particles- Work and energy- Impulse and momentum.	
Practical Component	
 Compound pendulum – Determination of acceleration due to gravity 	
 Non-uniform bending – Determination of Young's modulus 	6 Hours
Acoustics	
Sound basic definitions - Human response to sound and vibration- Range of audible sound	
pressure levels and frequencies, infra sound, ultrasound-Pitch-Loudness: equal loudness	
contours and loudness level. Loudness calculations. Principle of superposition of waves,	9 Hours
interference, beats, standing waves- Principle of active noise control- Doppler effect.	> 110 til 5
Reverberation - Reverberation time - Absorption coefficient and its determination - Factors	
affecting the acoustics of the buildings and their remedies.	
affecting the acoustics of the buildings and then femetics.

Course Content	
INTRODUCTION TO PROBLEM SOLVING AND C BASICS	3 Hours
Introduction to computer problem-solving – The problem-solving aspect- Top-down	
design -Building blocks, pseudocode notation, flowcharts – Implementation of	
algorithms –Simple algorithmic problem-solving scenarios – C programming: data	
types, variables, operators and expressions, input and output operations, control flow	
using if and switch statements.	
Practical Component	
Drawing flowcharts, writing pseudocode for algorithmic problem scenarios, Programs	18 Hours
using arithmetic, logical, and relational operators, Simple logic-based programs using	10 110013
conditionals	
	2 Hanna
ARRAYS AND STRING	3 Hours
Looping and Control Statements: for, while, break, continue -Nested Loops - Defining	
an array - Processing an array - Multidimensional Arrays-Character Arithmetic -	
Defining a string - NULL character - Initialization of Strings - Reading and Writing	
Strings - Processing Strings - Searching and Sorting of Strings.	
Practical Component	18 Hours
Pattern printing using loops - Programs for defining and processing 1D and 2D arrays,	
Searching (linear and binary search), Sorting (bubble sort, selection sort), Matrix	
operations (addition, subtraction, transpose), String handling with/without standard	
functions	
FUNCTIONS AND STORAGE CLASSES	3 Hours
Defining a function - Accessing a function - Function prototypes -User defined Function	
- Actual and Formal parameters - Passing arrays to functions - Function with string -	
Recursion - Storage classes	
Practical Component	18 Hours
Programs using functions with arguments and return values, Recursive functions (e.g.,	16 Hours
factorial, Fibonacci, sum of numbers), Passing arrays and strings to functions, Programs	
demonstrating storage classes: auto, static, extern, register	
POINTERS, STRUCTURES AND UNIONS	3 Hours
Pointer Fundamentals - Pointer Declaration - Passing Pointers to a Function, call by	Cliouis
value, call by reference- Pointers and arrays - Operations on pointers - Dynamic memory	
allocation- Structures and Unions: Defining a Structure - Processing a Structure - User	
defined data types (Typedef) -Unions	
Practical Component	10 11
•	18 Hours
Using Pointers - operations and arithmetic, swapping values using pointers, array	
manipulation- searching. Dynamic memory allocation using malloc, calloc, and free,	
Programs using structures and unions, Accessing structure members using pointers	2.11
FILES AND DEBUGGING	3 Hours
File Operations -Open, close, read, write- Processing a data file -Unformatted data files -	
Concept of binary files - Accessing a file randomly using fseek- Types of errors: Syntax,	
Logical, Runtime – Debugging techniques: Tracing with printf(), setting breakpoints,	
step-by-step execution - Introduction to debugging tools: gcc -g, GDB- Integrated	
Development Environment – Best practices in debugging C programs.	
Practical Component	
Text and Binary File read/write operations with Structures and Union - Search and	
Replace using fseek, Debugging C programs using printf() tracing and GDB, Identifying	18 Hours

and fixing errors- integer division, incorrect loop condition, reading a non-existing file, Divide by zero, Accessing array out of bounds.

Course Content	
OVERVIEW OF DIGITAL SYSTEMS AND BOOLEAN ALGEBRA Introduction to Digital Systems - Analog vs. Digital Signals - Digital System Design Process- Number base conversions, complements, signed binary numbers - Binary codes- Boolean Algebra and its properties, Boolean functions, Simplification of Boolean functions using Boolean algebra- Canonical and standard forms.	7 Hours
Practical Component Study of logic gates	4 Hours

Implement Boolean functions using logic gates and validate the outputs with truth tables	
COMBINATIONAL LOGIC CIRCUITS	
Overview of Digital Logic Circuits - Simplification of four-variable Boolean functions using Karnaugh maps- Realization of logic gates using NAND and NOR gates –Analysis and design of Combinational Logic Circuits -Half adder, Full adder, Half subtractor, Full	
subtractor-Code converters - Decoders, Encoders - Multiplexers, Demultiplexers.	8 Hours
Practical Component 1. Design and construct half adders, full adders, half subtractors, and full	
subtractors.	
2. Create combinational circuits to solve real-world problems.	14 Hours
3. Develop a code converter circuit using logic gates.	
4. Design and implement decoder and encoder circuits.	
5. Construct multiplexers and demultiplexers and incorporate them into circuit	
designs. SEQUENTIAL LOGIC CIRCUITS	
SR, JK, D, T flip-flops, Edge-triggering and level-triggering - Asynchronous and	
synchronous counters - Decade counter, Ring counter - Shift registers (SISO, SIPO, PISO,	8 Hours
PIPO).	
Practical Component	
1. Implement and test various types of shift registers.	8 Hours
2. Design and build a synchronous and asynchronous counter.	
LOGIC FAMILIES AND PROGRAMMABLE DEVICES	7 Hours
Introduction to digital logic families, RTL, ECL, TTL and CMOS - Programmable Logic	7 Hours
Devices - Programmable Logic Array (PLA), Programmable Array Logic (PAL) -	
Implementation of combinational logic circuits using PLA and PAL.	
Practical Component	4.77
Study of VHDL models for combinatorial circuits.	4 Hours
Theory Tutorial Practical Project	Γotal
Hours: 30 Hours: 0 Hours: 30 Hours: 0 Hours	ours: 60

Cou	Course Objectives:						
The p	ourpose of taking this course is to:						
1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அம்சங்களை அறிமுகப்படுத்துதல், அதன் தொன்மைக்காலம் முதல் நவீனகாலம் வரையிலான வளர்ச்சியை விளக்கம் செய்யுதல்.						
	Introduce students to the foundational aspects of Tamil language and literature, tracing its evolution from ancient to modern times.						
2	தமிழகத்தின் செழுமையான கலாச்சார பாரம்பரியத்தை அறிமுகப்படுத்துதல், பாறை ஓவியக் கலையிலிருந்து நவீன சிற்ப கலையின்படி அதன் கலை வெளிப்பாடுகளை ஆராய்தல். Familiarize students with the rich cultural heritage of Tamil Nadu, exploring its artistic expressions from rock art paintings to contemporary sculptures.						
3	தமிழகத்தின் நாட்டுப்புறக் கலைகள் மற்றும் வீரவிளையாட்டுகளை அறிதல்- தின்ணக்கோட்பாடுகளை ஆராய்தல்- இந்திய தேசிய இயக்கத்தில் தமிழர்களின் பங்கினை அறிதல். To know the folk arts and heroic ames of Tamilnadu-explore the concept of thinai -to know the role of Tamils in Indian National movement.						

Cour	rse Outcomes						
After	After successful completion of this course, the students shall be able to						
CO1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அறிவை மேம்படுத்துதல். மொழி பண்பாட்டில் எவ்வாறு இணைந்துள்ளது என்பதை உணர்தல். Enhance the fundamental knowledge of Tamil language and literature	U					
CO2	பழங்கால பாறை ஓவியங்கள், சிற்பம் என கலைகள் நவீன காலம்வரை எவ்வாறு பயணிக்கிறது என்பதை புரிந்துகொள்ளுதல். Understand the heritage, rock art paintings to modern art sculpture	U					
CO3	நாட்டுப்புறக் கலைகள் தற்காப்புக் கலைகளாகவும், உடல் ஆரோக்கியத்தை மேம்படுத்தும் விதமாகவும் அமைவதை அறிந்து கலைகள் மீதான ஆர்வத்தை அதிகரிக்கச் செய்தல்- தமிழர்களின் அகத்திணை, புறத்திணை கோட்பாட்டினை புரிந்து கொள்ளுதல். இந்திய பண்பாட்டில் தமிழர்களின் பங்களிப்பை அறிதல். Acquire essential knowledge in the folk and martial arts-understanding the Agam and puram concept- to know the contribution of Tamils in Indian culture.	Ap

Course Objectives:

1

The purpose of taking this course is to:

provide students with a comprehensive understanding of how emerging technologies like AI, IoT, blockchain, big data, and automation are revolutionizing various industries. Focusing on sectors such as agriculture, education, healthcare, gaming, music, law, and textiles, the course explores the application of these technologies to develop innovative solutions that enhance productivity, sustainability, and user engagement. Students will analyze the impact of digital tools on transforming key sectors and evaluate strategies to improve operational efficiency, creativity, and adaptability. Additionally, the course examines the disruption of traditional business models by these technologies, equipping students with the skills to leverage these changes for innovation and competitiveness in a rapidly evolving landscape.

Cours	se Outcomes	
After	successful completion of this course, the students shall be able to	Revised Bloom's Taxonomy Levels (RBT)
CO1	understand the role of digital tools in education and healthcare for enhancing user engagement and fostering innovation.	U
CO2	outline the role of technologies in enhancing agricultural practices to demonstrate how these technologies can improve productivity and sustainability in farming.	U
СОЗ	relate the key technological applications of emerging domains that enhance operational efficiency and creativity.	R

Cour	Course Objectives:							
The p	urpose of taking this course is to:							
1	understand the techniques of evaluating double and triple integrals and applying them to calculate areas and volumes.							
2	familiarize students with vector field concepts such as gradient, divergence, and curl, and apply the theorems of Green, Gauss, and Stokes.							
3	develop an understanding of the least squares method for fitting various types of curves and its application in forecasting.							
4	equip students with knowledge of time series analysis, including construction, trend measurement, and seasonal variation determination.							
5	introduce students to numerical methods such as interpolation, numerical differentiation, and numerical integration.							

Cour	Course Outcomes						
After	Revised Bloom's Taxonomy Levels (RBT)						
CO 1	apply double and triple integrals with constant and variable limit concepts to compute areas and volumes in cartesian coordinates.	Ap					
CO 2	calculate gradient, divergence, and curl, and verify Green's theorem, Gauss's divergence theorem, and Stokes' theorem in a given vector field.	Ap					
CO 3	assess the reliability of predictions using goodness-of-fit measures like R ² , RMSE, MAE, and MAPE for the method of least squares to fit linear, parabolic, cubic, and non-linear curves.	An					
CO 4	analyze time series data, and measure trends using methods like moving averages and assess seasonal variations through appropriate techniques.	An					
CO 5	apply Newton's interpolation techniques for both forward and backward interpolation, perform numerical differentiation.	Ap					
CO 6	apply the concepts of Trapezoidal and Simpson's rules for numerical integration.	Ap

Course Objectives:						
The purpos	se of taking this course is to:					
1	Introduce the basics of Python, including data types, operators, and control structures					
2	Develop proficiency in iterative statements, string handling, and data structures like lists, tuples, and dictionaries.					
3	Provide knowledge on modules, functions, object-oriented programming concepts, and file handling.					
4	Familiarize students with exception handling and Python's standard libraries like NumPy and Pandas.					
5	Enable students to apply Python concepts to solve real-world problems through practical experiments.					

Cours	Course Outcomes						
After	Revised Bloom's Taxonomy Levels (RBT)						
CO1	Understand Python syntax, data types, operators, and basic control structures	U					
CO2	Apply conditional and iterative constructs for solving logical problems.	Ap					
CO3	CO3 Implement modular programming concepts, handle strings, and utilize data structures efficiently						
CO4	Demonstrate object-oriented programming, file handling, and exception handling in Python.	Ap					
CO5	Utilize libraries like NumPy and Pandas for data analysis and manipulation.	Ap

Course Content	
PYTHON BASICS AND CONTROL STRUCTURES	6 Hours
Python Basics: Python syntax – Variables - Data Types - Type Casting - Arithmetic	
& Logical Operators. Conditional Branching Statements: if, if-else, if-elif-else,	
nested conditions. Iterative Statements: for loop, while loop, Loop Control	

Statements. Functions and Lambda Functions: Defining functions, Function	
arguments - Return values - Anonymous Lambda Functions.	
Practical Component	
Implement basic Python programs to demonstrate data types, operators, and I/O.	6 Hours
Develop programs using conditional statements - if, if-else, nested conditions. Write	
Python scripts using loops to generate patterns and series. Implement Python	
functions and lambda functions with different argument types.	
PYTHON MODULES, STRINGS, AND DATA STRUCTURES	6 Hours
Modules - built-in and user-defined modules - String Handling: String slicing,	
concatenation, formatting, and methods-List: Creating lists- List indexing- List	
methods - List comprehension. Tuple - Characteristics of tuples- Tuple indexing,	
Tuple methods. Dictionary: Key-value pairs, Dictionary methods.	
Practical Component	6 Hours
Create Python scripts to demonstrate string manipulation techniques. Perform	
operations on lists, tuples, and dictionaries using various methods.	
OBJECT-ORIENTED PROGRAMMING	6 Hours
Classes and Objects: OOP concepts - Creating classes and objects - Self parameter -	
init method. Inheritance & Polymorphism: Types of inheritance Method Overriding,	
Method Overloading in Python.	
Practical Component	6 Hours
Develop a simple OOP-based application to demonstrate classes, objects,	
inheritance, and polymorphism.	
FILE HANDLING AND EXCEPTION HANDLING	6 Hours
File Handling: Reading and writing files, File modes - Working with text and CSV	
files. Exception Handling: Understanding exceptions - Handling exceptions using	
try-except-finally - Raising custom exceptions.	
Practical Component	6 Hours
Read and write text and CSV files using Python file handling methods. Implement	
exception handling with custom exceptions in Python.	
PYTHON LIBRARIES	6 Hours
NumPy Library: Introduction to NumPy, Arrays, Array creation and manipulation,	
Array operations - Pandas Library: Series - Creating Series - Indexing - Operations	
on Series. DataFrames: Creating DataFrames - Data Manipulation - Handling	
Missing Data.	
Practical Component	6 Hours
Perform basic operations on NumPy arrays. Manipulate data using Pandas Series and	
DataFrames, including handling missing values.

FUNDAMENTALS OF EMBEDDED SYSTEMS AND MICROPROCESSOR	6 Hours
Overview of Embedded Systems: Characteristics, system architecture, and design	
challenges. Introduction to Microprocessors and Microcontrollers- 8086 Microprocessor	
Architecture-Internal operations - Addressing modes -Instruction formats	
Practical Component	6 Hours
1. Basic Assembly Program: ALP to perform 16-bit arithmetic operations	
MICROPROCESSOR PROGRAMMING	8 Hours
8086 Assembly Language Programming - The Instruction Set - Types of Instructions -	
Data Transfer - Arithmetic - Logical - Shift and Rotate - Flag Control - Compare -	
Control Flow and Jump Instructions - Subroutine - Loop and String Handling	
Instructions - Interrupt Mechanism - Types and Priority - Enabling and Disabling of	
Interrupts.	
Practical Component	8 Hours
ALP to perform Logical Operations, Shift and Rotate	
2. ALP to perform Looping and Subroutine Implementation	
3. ALP to perform Sorting and Data Movement	
MICROCONTROLLER ARCHITECTURE AND EMBEDDED	8 Hours
PROGRAMMING EMBEDDED	o nours
8051 Microcontroller Architecture- Internal Components- Instruction Set Architecture-	
I/O Ports and Peripherals- Interrupts and Interrupt Handling - Embedded Programming	
- Bitwise Operations and Port Control. Peripheral Interfaces: Basics of CAN, LIN, SPI,	
- Bitwise Operations and Port Control. Peripheral Interfaces: Basics of CAN, LIN, SPI, I2C for embedded communication.	
	8 Hours
Practical Component (Using Andwine (Pashbarmy Pi/NedoMCII)	o mours
(Using Arduino/Raspberry Pi/NodeMCU) 1. Interfacing sensor with a microcontroller and display the sensor readings on an	
LCD.	
2. Use interrupts to toggle an LED based on a button press	0.11
FUNDAMENTALS OF IOT AND SENSOR INTEGRATION	8 Hours
Introduction to Internet of Things - Basics - Sensor and Actuators-Overview of	
temperature sensors, pressure sensors, accelerometers, gyroscopes, and actuators,	
applications. Complete Design of Embedded System - System Integration and Case	
Studies: Developing and testing prototypes using development boards.	0.11
Practical Component	8 Hours
(Using Arduino/Raspberry Pi/NodeMCU)	
1. Combine data from an accelerometer and gyroscope to estimate the orientation of a	
device.	
2. Design and implement a small embedded system that integrates multiple sensors	
and communicates with other devices. (Example, a simple weather station that	
measures temperature, humidity, and pressure, and sends the data to a central	
system.

Course Content	
MANAGERIAL ECONOMICS & DEMAND ESTIMATION	9 Hours
Managerial goals vs. shareholder value; Law of demand & supply; elasticity (price, income,	
cross); marginal utility & consumer surplus; exceptions to the law of demand; quantitative	
& qualitative demand-forecasting techniques (time-series, causal models, Delphi, big-data	
tools); introduction to behavioural economics for managers.	
COST & FINANCIAL ACCOUNTING FUNDAMENTALS	9 Hours
Cost concepts—fixed, variable, stepped, sunk, opportunity, relevant; economies &	
diseconomies of scale; cost-volume-profit analysis; accounting principles & conventions,	
double-entry system, journal-ledger-trial balance; the accounting equation; preparation of	
basic Income Statement and Balance Sheet.	
FINANCIAL STATEMENT ANALYSIS & CASH-FLOW MANAGEMENT	9 Hours
Operating vs. financing & investing cash flows; preparation of the Statement of Cash Flows	
(IND-AS 7); working-capital management; ratio analysis—liquidity, leverage, profitability,	
efficiency; advanced cash-flow metrics (EBITDA, FCF, EVA); brief introduction to	
valuation multiples.	
MARKETING PRINCIPLES IN THE DIGITAL ERA	9 Hours
Evolution of marketing & the holistic marketing concept; Marketing vs. Selling; customer	
value & satisfaction; 7 Ps and extended service mix; product-life-cycle strategies; overview	
of digital marketing (SEO, SEM, social, content, influencer); omnichannel customer	
journeys.	
MARKET RESEARCH, ANALYTICS & STRATEGIC INTEGRATION	9 Hours
Marketing-information systems (MIS); environmental & competitor scanning (PESTLE &	
Porter 5-forces); STP—segmentation techniques, targeting criteria, positioning maps;	
basics of marketing analytics (A/B testing, RFM, CLV); integrating finance & marketing	
for growth strategy—profit-impact of marketing decisions, budgeting, ROI dashboards;	
capstone case discussion.

Course Content	
நெசவு மற்றும் பானைத் தொழில்நுட்பம்:	
சங்க காலத்தில் நெசவுத் தொழில் - பானைத் தொழில்நுட்பம் - கருப்பு சிவப்பு பாண்டங்கள் -	
	3 Hours
பாண்டங்களில் கீறல் குறியீடுகள். Weaving Industry during Sangam Age - Ceramic technology - Black and Red Ware	
Potteries (BRW)-Graffiti on Potteries.	
வடிவமைப்பு மற்றும் கட்டிடத் தொழில்நுட்பம்:	
சங்க காலத்தில் வடிவமைப்பு மற்றும் கட்டுமானங்கள் ரூ சங்க காலத்தில் வீட்டுப் பொருட்களில்	
வடிவமைப்பு - சங்க காலத்தில் கட்டுமான பொருட்களும் நடுகல்லும் -சிலப்பதிகாரத்தில் மேடை	
அமைப்பு பற்றிய விவரங்கள் - மாமல்லபுரச் சிற்பங்களும், கோவில்களும் - சோழர் காலத்துப்	
பெருங்கோயில்கள் மற்றும் பிற வழிபாட்டுத் தலங்கள் - நாயக்கர் காலக் கோயில்கள் - மாதிரி	
கட்டமைப்புகள் பற்றி அறிதல், மதுரை மீனாட்சி அம்மன் ஆலயம் மற்றும் திருமலை நாயக்கர் மஹால்	
- செட்டிநாட்டு வீடுகள் - பிரிட்டிஷ் காலத்தில் சென்னையில் இந்தோ-சாரோசெனிக் கட்டிடக் கலை.	3 Hours
Designing and Structural construction House & Designs in household materials during	
Sangam Age - Building materials and Hero stones of Sangam age Details of Stage	
Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great	
Temples of Cholas and other worship places - Temples of Nayaka Period - Type study	
(Madurai Meenakshi Temple)- Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo -	
Saracenic architecture at Madras during British Period.	
உற்பத்தித் தொழில் நுட்பம்:	
கப்பல் கட்டும் கலை - உலோகவியல் - இரும்புத் தொழிற்சாலை - இரும்பை உருக்குதல், எஃகு -	
வரலாற்றுச் சான்றுகளாக செம்பு மற்றும் தங்க நாணயங்கள்- நாணயங்கள் அச்சடித்தல் - மணி	
உருவாக்கும் தொழிற்சாலைகள் - கல்மணிகள், கண்ணாடி மணிகள் - சுடுமண் மணிகள் - சங்கு மணிகள்	
- எலும்புத்துண்டுகள் -தொல்லியல் சான்றுகள் - சிலப்பதிகாரத்தில் மணிகளின் வகைகள்.	2 11
Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel-	3 Hours
Copper and gold- Coins as source of history - Minting of Coins - Beads making-industries	
Stone beads -Glass beads - Terracotta beads -Shell beads/ bone beats - Archeological	
evidence - Gem stone types described in Silappathikaram.	
வேளாண்மை மற்றும் நீர்ப்பாசனத் தொழில் நுட்பம்:	

அணை, ஏரி, குளங்கள், மதகு - சோழர்காலக் குமுழித் தூம்பின் முக்கியத்துவம்- கால்நடை பராமரிப்பு - கால்நடைகளுக்காக வடிவமைக்கப்பட்ட கிணறுகள்- வேளாண்மை மற்றும் வேளாண்மைச் சார்ந்த செயல்பாடுகள் - கடல்சார் அறிவு - மீன்வளம் - முத்து மற்றும் முத்துக்குளித்தல் - பெருங்கடல் குறித்த பண்டைய அறிவு - அறிவுசார் சமூகம்.

3 Hours

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry - Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries - Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

அறிவியல் தமிழ் மற்றும் கணித்தமிழ்:

அறிவியல் தமிழின் வளர்ச்சி - கணித்தமிழ் வளர்ச்சி - தமிழ் நூல்களை மின்பதிப்பு செய்தல் - தமிழ் மென்பொருட்கள் உருவாக்கம் - தமிழ் இணையக் கல்விக்கழகம் - தமிழ் மின் நூலகம் - இணையத்தில் தமிழ் அகராதிகள்- சொற்குவைத் திட்டம்.

3 Hours

Development of Scientific Tamil - Tamil computing- Digitalization of Tamil Books-Development of Tamil Software - Tamil Virtual Academy - Tamil Digital Library - Online Tamil Dictionaries - Sorkuvai Project.

Course Objectives:

The purpose of taking this course is to:

- introduces first-year engineering students to Design Thinking, focusing on practical, user-centered problem-solving techniques
- 2 empathize with users, generate ideas, and create models to test and refine their solutions
- 3 understand iteration, empathy, and critical reflection to cultivate a creative mindset

Course Outcomes

After su	ccessful completion of this course, the students shall be able to	Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply problem-solving techniques and the Design Thinking process to engineering problems using simple models	Ap
CO 2	understand user needs through various empathy techniques and develop/refine models iteratively based on user insights.	U
CO 3	reflect critically on their learning journeys and the emotional demands of problem-solving. Collaborate effectively in teams to develop innovative solutions	Ap

Course Content

Introduction to Problem Solving and Ground Rules

Introduction to problem-solving strategies without mentioning Design Thinking-Emphasize problem-solving attitudes, mindsets, and behaviours necessary for iterative problem solving (e.g., openness to failure, patience, empathy)-Set ground rules for the course, including incentives for creative risk-taking and penalties for non-participation or lack of reflection-Overview of the Design Thinking process and its importance.

6 Hours

Empathy and Problem Definition Techniques for understanding user needs, including observation, interviews, surveys and focus groups-Importance of secondary research as a complement for the abovementioned methods-Introduction to empathy cycles: involve students in two empathy cycles before and after problem definition-Finetuning problem definition based on user insights.	6 Hours
Ideation and Concept Modelling Brainstorming ideas and selecting feasible solution-Creating concept modelling to visualize ideas-Include an empathy cycle after students propose solutions, allowing them to revisit and reshape their solutions based on further insights from users.	6 Hours
Prototyping and Testing with Models Building basic prototypes using simple materials (e.g., cardboard, clay)- Introduction to different prototyping methods (e.g., low-fidelity vs high-fidelity models) for different contexts: product design, space design, policy, and digital/e-commerce solutions-Conduct an empathy cycle after the prototype is developed to gather user feedback and refine the prototype.	6 Hours
Iteration and Final Modelling Project Students refine their prototypes based on feedback from the empathy cycle-Finalize prototypes for presentation based on consistent feedback loops.	6 Hours
Presentation, Reflection, and Learning Summaries Students present their final projects and reflect on their learning journeys, including how their understanding of problem-solving and empathy evolved during the course-Learning Summary Activity: Each student presents their individual journey and learning outcomes from the empathy cycles and iterations-Peer review and group discussions.	6 Hours

DATA STRUCTURES AND ALGORITHMS

(Common to AD, CS, IT)

L	T	P	J	C	
3	0	2	0	4	
SDG	1		9		

Pre-requisite courses

Data Book / Code book (If any)

Course Objectives:

The purpose of taking this course is to:

- gain a comprehensive understanding of core data structures (arrays, lists, stacks, queues, trees, graphs) and algorithms, and how they are applied in solving computational problems.
- develop the ability to analyze and evaluate the time and space complexity of algorithms using notations such as Big O, Big Theta, and Big Omega, helping in making optimal algorithmic choices for different applications.
- acquire hands-on skills to implement and manipulate linear and non-linear data structures (linked lists, binary trees, heaps, hash tables) for real-world software development scenarios, improving program efficiency and memory management.

Cour	Course Outcomes							
After	successful completion of this course, the students shall be able to	Revised Bloom's Taxonomy Levels (RBT)						
CO 1	understand various data structures and their application as tools for effective problem-solving.	U						
CO 2	identify appropriate linear and non-linear data structures to solve specific computational challenges.	Ap						
CO 3	analyze the efficiency and effectiveness of different algorithms by examining time and space complexities and evaluate their performance in solving problems.	An						
CO 4	develop programs that employ suitable data structures, individually or in combination, to create efficient solutions for complex challenges.	Ap

Course Content	
INTRODUCTION TO DATA STRUCTURES AND ALGORITHMS	
Introduction to Data Structures and Algorithms, Importance of data structures in	6 Hours
programming and software development, data types vs data structures, Abstract Data	
Types (ADTs), Algorithm analysis: Big O, Big Theta, Big Omega notations	

Practical Component							
Implementation of List ADT using arrays	4 Hours						
LINEAR DATA STRUCTURES							
Lists: unordered and ordered lists, insertion, deletion and display operations, Stacks:	12 Hours						
Implementation, Applications in expression evaluation, Queues: Implementation,	12 110ul 8						
Variants (Circular Queue, Priority Queue), Applications, Dynamic Memory							
Implementation: Linked Lists, stack, queue and queues (Single, Double, and Circular							
linked implementation).	8 Hours						
Practical Component	OHOUIS						
Implement the applications of Linear Data structures							
NON-LINEAR DATA STRUCTURES							
Trees: Binary Trees, Binary Search Trees, AVL Trees, Tree Traversal Algorithms:	12 Hours						
Inorder, Preorder, Postorder. Heap - Binary Heap, Complete Binary Tree, Tree	12 110013						
Representation of Binary Heap, Max Binary Heap, Min Binary Heap, Insertion and							
Deletion in Binary Heap. Graphs: Terminologies, Representation (Adjacency Matrix,							
List), Graph Traversal (BFS, DFS), Spanning Trees, Shortest Path Algorithms (Dijkstra,							
Floyd-Warshall).							
Practical Component							
Implement the applications of Non-Linear Data structures							
SORTING AND SEARCHING ALGORITHMS	12 Hours						
Sorting Algorithms: Bubble Sort, Selection sort, insertion sort, Merge Sort, Quick Sort,							
Heap Sort, Searching Algorithms: Linear Search, Binary Search, Jump search,							
Exponential search and Interpolation search.	8 Hours						
Practical Component	o mouns						
Implement the Sorting and searching Algorithms							
HASHING TECHNIQUES	3 Hours						
Hashing: Hash Functions, Collision Resolution Techniques, Linear probing, Quadratic							
probing, random probing, Double hashing and rehashing, Hashing Applications.							
Memory Management: Garbage Collection							
Practical Component	2 Hours						
Implementation of Hash Table							
Theory Tutorial Practical Project	Total						
Hours: 45 Hours: 0 Hours: 30 Hours: 0	Hours: 75

Course Content	
INTRODUCTION TO DATABASES AND DATA MODELLING	9 Hours
Evolution from File Systems to DBMS – Advantages of Using DBMS approach -	9 Hours
Types of Data - Data Models - DB Architecture and users - Relational Model	
Concepts - Attributes, Tuples, Relations and Constraints -Differences between OLAP	
and OLTP- Introduction to SQL: DDL, DML, Data Types, Constraints and Aggregate	
Functions.	
Tunctions.	6 Hours
Practical Component	
Creation of a database and writing SQL queries to retrieve information from the database	
- Exploring the use of WHERE, ORDER BY, and limit clauses in SQL - Implement	
Aggregate Functions.	
RELATIONAL MODELLING AND DATABASE DESIGN	9 Hours
Logical Database Design: Different approaches in Logical design, ER Modeling, ER	> 110 W10
notations - Steps in ER modeling. Physical database design: Converting ER Model to	
Relational Database Design, Normalization -Functional Dependency, 1NF, 2NF, 3NF,	
Boyce-Codd Normal Form (BCNF) - Decomposition properties.	
Practical Component:	6 Hours
Implementation of ER Diagram and identifying its entities, relations, attributes and	
constraints – Converting the ER diagram into relational schema – Convert a relation to	
1NF, 2NF, 3NF and BCNF.	
PHYSICAL DATABASE DESIGN AND QUERY PROCESSING	9 Hours
Overview of File Organization - RAID concepts - Indexing: Single, Multilevel -	
Dynamic - B+-tree indexing - Hashing Techniques - Static and Dynamic Hashing -	
Relational Algebra – Translating SQL Queries into Relational Algebra – Joins – Query	
Optimization: Join Query Optimization – Query Optimization Rules – Tuple Relational	
Calculus.	
	6 Hours
Practical Component:	
Simulation of relational Algebra operations – Performing joins using Relational Algebra	
– Implementation of various SQL joins.	
TRANSACTION MANAGEMENT AND CONCURRENCY CONTROL	9 Hours
Transaction Concepts - ACID Properties - Transaction States - Transaction control	
Commands - Serializability Concepts - Recovery Mechanisms: Undo/Redo, Shadow	
Paging, Log Based Recovery - Concurrency Control: Locking Protocols, Timestamp	
Protocols, Deadlock Handling.	
	ć II
Practical Component:	6 Hours
Implement multiple transactions using SQL involving BEGIN, COMMIT &	
ROLLBACK – Write SQL Queries for Nested Transactions.	0.116
NOSQL DATABASE MANAGEMENT	9 Hours
Introduction to NoSQL Databases – Key Features and Principles of NoSQL – CAP	
Theorem – Classification of NoSQL Databases- Querying in NoSQL Systems: CRUD	
operations – NoSQL Query Language Overview	
Practical Components	6 Hours
Practical Component: Creation of Database and Performing CRUD operations in NoSQL – Querying with	0 110ul8
NoSQL databases.	
110000 44400000.

INTRODUCTION TO AI Fundamentals of AI - Definitions, Key concepts, Intelligent agents, Agents and Environment. Propositional Logic – Agents based on Propositional Logic – First order	

Theory Tutorial Practical Project	Total
Practical Component Downloading and installing UiPath Studio - Explore Robotic Process Automation (RPA) tools like UiPath or Automation anywhere - Create a basic automation to extract information from a document and store it in a spreadsheet.	6 Hours
ARTIFICIAL INTELLIGENCE FOR AUTOMATION Understanding Automation, Applications of AI-driven Automation, Opportunities and challenges in AI automation. Automation in production systems-Automation principles and strategies-Basic elements of an automated system. Introduction to Robotic Process Automation- Benefits of RPA, Components of RPA-RPA Platforms-About Ui Path.	9 Hours
Practical Component Implement a simple MDP for decision-making in a dynamic environment - Develop a game-theoretic model for AI-based strategic decision-making	6 Hours
DECISION-MAKING Importance of decision making in AI, Utility, preferences and Expected utility in decision-making under uncertainty, Decision Theory Basics, Markov Decision Processes (MDPs), Game theory and strategic decision-making in AI.	9 Hours
Practical Component Build and evaluate a Bayesian Network for a real-world problem - Implement Hidden Markov Models (HMM) for sequence prediction tasks	
REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE Handling uncertainty in AI, Probability theory and its connection to logic, Concepts of independence and conditional probability, Structure of Bayesian Networks, Bayesian rule and its applications, Markov Models and Hidden Markov Models (HMMs), Probabilistic graphical models and Inference algorithms.	9 Hours 6 Hours
Practical Component Implement AI search algorithms such as BFS, DFS, A* and AO* - Develop an AI for Tic-Tac-Toe or Chess using heuristic-based decision-making - Implement a Sudoku solver or a N-Queens problem solver using backtracking and constraint satisfaction techniques.	6 Hours
PROBLEM SOLVING State space search; production systems, search space control; depth first search, breadth-first search. Heuristic Based Search: Hill climbing, best-first search, A*Algorithm and AO* algorithm, Min-max algorithms, game playing – Alpha beta pruning branch and bound, Problem Reduction, Constraint Satisfaction.	9 Hours
Practical Component Intelligent Agent Simulation - Propositional Logic and Knowledge-Based Agent - First Order Logic and Inference (Chaining and Resolution)	
logic – Syntax and semantics – Knowledge Engineering in First Order Logic– Inference – Unification - Forward and backward chaining - Resolution.	6 Hours

COMPUTER ORGANIZATION AND ARCHITECTURE

L T P J C
3 0 0 0 3
SDG 4,9

PC (Common to CS, IT)

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
-----------------------	-----	--	-----

Course	Course Objectives:					
The purp	The purpose of taking this course is to:					
1	Introduce the basic structure and functional components of a computer system, including its					
	evolution, Von Neumann architecture, and performance parameters.					
2	Explain the internal organization of a basic computer, focusing on instruction formats,					
	addressing modes, and the distinction between CISC and RISC architectures.					
3	Explore arithmetic and logic unit (ALU) operations including integer and floating-point					
	computations.					
4	Examine memory hierarchy, cache, and I/O system designs and their impact on					
	performance.					
5	Explore modern advancements in computer architecture, including multicore processors,					
	parallel architectures, and multiprocessor systems with interconnection structures and					
	synchronization techniques.					

Cour	Course Outcomes:				
After	successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)			
CO 1	Identify and explain the structure, functional units, performance characteristics of computer systems	U			
CO 2	Apply arithmetic algorithms to perform for addition, subtraction, multiplication, and division with correctness and efficiency in problem-solving tasks.	Ap			
CO 3	Apply the concepts of instruction execution, multiple bus organization, and control unit design to implement control logic using hardwired and microprogrammed approaches.	Ap			
CO 4	Explain the operations of I/O subsystems and memory architectures, and describe the roles of programmed I/O, interrupts, DMA, RAM, cache, and memory hierarchy in data transfer and system performance.	U			
CO 5	Utilize the principles of pipelining, hazard management, and parallel processing architectures such as superscalar, multicore, and GPU acceleration to improve performance in real-time computing systems.	Ap

Course Content	
FUNDAMENTALS OF COMPUTER ORGANIZATION Organization and Architecture- Structure and Function- Functional Units-Basic Operations and Concepts-Bus Structure-Performance. Memory Locations and Addresses - Memory Operations - Instruction and Instruction Sequencing - Addressing Modes - Basic I/O Operations. Case Study: Evolution of Intel, ARM Architectures/Processor Families	7 Hours
COMPUTER ARITHMETIC Addition and Subtraction of Signed Numbers-Design of Fast Adders-Multiplication of Positive Numbers-Signed Operand Multiplication-Fast Multiplication-Integer Division-Floating Point Numbers and Operation.	11 Hours
BASIC PROCESSING UNIT Fundamental Concepts - Execution of a Complete Instruction - Multiple Bus Organization - Hardwired Control - Microprogrammed Control - Microinstructions- Microprogram Sequencing-Wide Branch Addressing	9 Hours
I/O AND MEMORY The I/O Subsystem, -Programmed I/O- I/O Interrupts -Direct Memory Access (DMA) - The Components of Memory System – RAM Structure: The Logic Designer's Perspective – Memory Boards and Modules-Memory Hierarchy – The Cache- The Memory Subsystem.	9 Hours
PIPELING AND PARALLEL PROCESSING Basic Concepts - Data Hazards - Instruction Hazards - Influence on instruction sets - Data path and control considerations - Superscalar operation. Multiple Processor Organization-Types, Parallel Organization. Multicore Computers Introduction - Organization- Software and Hardware performance issues. Case Study: GPU Acceleration in Real-Time System.	9 Hours

COMPUTER NETWORKS AND SECURITY

L T P J C 3 0 2 0 4 SDG 4,9

PC (Common to AD, CS, IT)

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	

Course	Course Objectives:				
The purpose of taking this course is to:					
1.	Illustrate the basic concepts, architecture, and protocols of computer networks, including the				
	OSI and TCP/IP models.				
2.	Familiarize students with networking hardware (routers, switches, firewalls) and basic				
	configuration principles.				
3.	Explore the functionalities, differences, and use-cases of major transport protocols such as				
	TCP (Transmission Control Protocol) and UDP (User Datagram Protocol).				
4.	Explain the basic security principles such as confidentiality, integrity, availability and explore				
	common threats, vulnerabilities and encryption techniques.				

Course	Course Outcomes								
After su	After successful completion of this course, the students shall be able to								
CO 1	Understand the principles of data communication and functionalities of standard network reference models.	U							
CO 2	Apply error detection methods and flow control techniques to ensure reliable data transmission in network communications.	Ap							
CO 3	Implement routing algorithms to recommend optimal paths for efficient packet switching and internetworking.	Ap							
CO 4	Apply congestion control mechanisms to assess their effectiveness and identify the functionalities of application layer protocols	Ap							
CO 5	Construct a secure data communication model using standard cryptographic algorithms for cyber defense.	Ap							

	Program Outcomes (PO) (Strong-3, Medium - 2, Weak-1)									Progra	am		
	1	2	3	4	5	6	7	8	9	10	11	Specific Outcome (PSO)	
Course Outcomes (CO)	Engineering Knowledge	Problem Analysis	Design/Development of Solutions	Conduct Investigations of Complex Problems	Engineering Tool Usage	The Engineer and The World	Ethics	Individual and Collaborative Team work	Communication	Project Management and Finance	Life-Long Learning	PSO-1	PSO-2

3	3		3	3									2
4	3		3			3							2
5	3	2	3									2	

Course Content	
	0.11
DATA COMMUNICATIONS	8 Hours
Basics of Data Communication, Network Models: The OSI Model, TCP/IP Protocol	
Suite, Addressing, Transmission Media, Networking Devices, Network Topologies.	
Practical Component	
Demonstrate the use of network Diagnostic tools such as PING, TRACEROUTE,	6 Hours
IPCONFIG , NSLOOKUP AND NETSTAT	0 110 113
DATA LINK LAYER	9 Hours
Encoding, Error Detection, Reliable Transmission, MAC Protocols, Multiple Access	
Protocols: Random Access, Controlled Access and Channelization.	
Practical Component	
Design a network topology in Cisco Packet Tracer with multiple devices, configure IP	
addresses and network protocols, and verify connectivity and proper communication	6 Hours
between all devices.	0.77
Network Layer	9 Hours
Circuit Switching, Packet Switching, Bridges and LAN Switches, Spanning Tree	
Algorithm, Internetworking, IPv4, Subnetting, IPv6, Routing Techniques (RIP, OSPF,	
BGP).	10 11
TRANSPORT LAYER AND APPLICATION LAYER	10 Hours
UDP, TCP, Congestion Control, Resource Allocation, TCP Congestion Control,	
Congestion Avoidance Mechanisms, Quality of Service (Integrated Services,	
Differentiated Services), Network Traffic Analysis. Application Layer -DNS, Email,	
WWW, HTTP.	
Practical Component	
Capture and analyze network traffic using Wireshark to identify and examine packets,	10 Hours
perform traffic analysis to assess network performance, and conduct vulnerability	
analysis to detect any security issues or anomalies -Implement TCP and UDP client-	
server applications using UNIX socket programming functions.	
NETWORKS SECURITY CONCEPTS	9 Hours
Introduction to network security concepts, Network Security Model, Classical	
Encryption Techniques-Symmetric cipher model, Substitution techniques, Transposition	
techniques, Block cipher concepts and Data Encryption Standard.	
Practical Component	8 Hours
Implementation of substitution and transposition technique.

JAVA PROGRAMMING

(Common to AD, CS, IT)

L	T	P	J	C
0	0	4	0	2
SD	G		9	

Pre-requisite courses	Nil	Data Book / Codes /	Nil
	1 122	Standards (If any)	1,22

Course	Objectives:	The purpose of taking this course is to:					
1	Understand the basics of Java programming, including loops, arrays, and string manipulations.						
2	Apply the principle	Apply the principles of Object-Oriented Programming (OOP) such as inheritance, polymorphism, and abstraction.					
3	Learn and impleme	Learn and implement Java Collections, Strings, and lambda expressions.					
4	Enable students to perform file operations and utilize the Java Collection Framework.						
5	Train Students in de	eveloping graphical user interfaces (GUIs).					

Course	Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)		
CO 1		orinciples of Java programming and Object-Oriented	Ap		
	Programming (C	OOP) concepts to write modular, efficient Java applications			
CO 2	Utilize Java pacl	kages, interfaces, and exception handling mechanisms to build	Ap		
	reusable and erro	or-resilient code			
CO 3	Develop multi-tl	nreaded applications and perform string and wrapper class	Ap		
	manipulations in	Java.			
CO 4	Analyse input/or	atput operations and use Java's collection framework for real-	An		
	time data storage	e and retrieval			
CO 5	Develop GUI-based Java applications using event controls and connect them to				
	databases using	JDBC

Course Content	
FUNDAMENTALS OF CLOUD COMPUTING	10 Hours
Cloud Computing Basics – History – Peer to peer computing - Distributed computing –	
Characteristics of cloud - Pros and Cons of cloud computing - Cloud Deployment	

Models – Public, Private, Hybrid, Community - Evolving Data Center into Private Cloud - Data center Components – Virtualization - KVM, VMware ESXi,, Xen - Data center security - Security layers - Host, network, VM, user access - Extracting Business value in Cloud Computing - Cloud Scalability - Distribution over the Internet Practical Component Set up the KVM hypervisor and verify virtualization support Deploy a Linux VM using virt-install in KVM – execute linux commands in Linux VM - create a VM Snapshot and Restore it in KVM - Create a Windows VM in VirtualBox and configure the network to check the Internet connection – Create and run a simple Linux VM in VirtualBox – Install VMWare work station and Create a VMs - Configure Virtual Networking to provide communication between VMs.	8 Hours
CLOUD DELIVERY MODELS	15 Hours
Introduction to Cloud Services - Infrastructure as a Service (IaaS) – Networking options - Virtual Private Cloud - Storage Management in IaaS - Persistent vs. ephemeral storage - File and Object storage - Data Protection – Container - VM vs Containers - Overview of OpenNebula as an IaaS platform - IaaS security - Benefits and challenges in using IaaS - Platform as a Service (PaaS) – Overview - PaaS Examples – Aneka Overview – Aneka Architecture – Aneka Programming Models - Benefits and challenges - Software as a Service (SaaS) – Introducing SaaS, SaaS Examples - Evaluating SaaS – user and vendor perspective - Impact of SaaS - Benefits and risks of SaaS - IaaS vs PaaS vs SaaS. Practical Component Create windows and Linux VMs in different IaaS platforms, Create a VPC in public cloud – Host a website in any IaaS platform - Run OpenNebula Sandbox via VirtualBox/VMware and deploy a VM - Create a Custom VM Template in OpenNebula - Deploy a sample app on a PaaS platform - Use a SaaS product Google Docs or Canva and list its features - Compare IaaS, PaaS, SaaS with real-world examples and prepare a report	10 Hours
CLOUD COMPUTING - CHALLENGES, RISK AND MITIGATION	12 Hours
Cloud Storage, Application performance, Data Integration, Security. Ensuring Successful Cloud Adoption-Designing a Cloud Proof of Concept, Vendor roles and capabilities, moving to the Cloud. Impact of Cloud on IT Service Management. Risks: Measuring and assessment of risks, Company concerns Risk Mitigation methodology for Cloud computing, Case Studies Risks and Consequences of Cloud Computing- Legal Issues, Compliance Issues, Privacy and Security. Practical Component Create and apply security groups in any cloud, Set user roles and permissions using Identity and Access Management.	06 Hours
MANAGING THE CLOUD	08 Hours
Managing and Securing Cloud Services, Managing Desktops and devices on the cloud, SOA and Cloud computing, Managing the Cloud environment, Planning for the Cloud – Economic Cost Model and Leveraging the Cloud, Cloud computing resources Practical Component Measure the resource utilization in a public cloud platform and list the usage of CPU, RAM, storage in a VM – create snapshot and generate backup of cloud instances, configure and activate cloud pricing calculators in any public cloud platform to estimate cost for running a basic app.	06 Hours

INTRODUCTION	7 Hours
Introduction to Machine Learning-Types of machine learning: Supervised, Unsupervised, Semi supervised and Reinforcement Learning-Applications of machine learning in various fields- Ethics in machine learning- Fairness, accountability and interpretability -Machine learning workflow- Data Preprocessing-Feature engineering-	

Correlation analysis- Model training and evaluation- Model monitoring and maintenance.	
Practical Component	4 Hours
Introduction to Python libraries for Machine Learning-Preprocessing of dataset	
REGRESSION MODELS	8 Hours
Linear regression- Simple Regression-Least Square Estimator-Maximum Likelihood	
Estimator- Multiple Regression -Polynomial Regression-Performance Metrices-Bias Variance Tradeoff- Overfitting - Underfitting - Gradient descent - Regularization	
Practical Component	
Implementation of regression problems- Optimization of regression model	
	6 Hours
CLASSIFICATION MODELS	12 Hours
Logistic Regression-Naive Bayes Classifiers-Decision Tree-K-Nearest Neighbors-Support Vector Machine – Evaluation metrices – AUC ROC- Class Imbalance –SMOTE – Cross-Validation Techniques-Ensemble Learning-Bagging- Random Forests-Boosting - AdaBoost -Gradient Boosting	
Practical Component	0.11
Implementation of classification models- Evaluation of models using performance	8 Hours
metrices.	
UNSUPERVISED LEARNING	10 Hours
Clustering- K-means Clustering- Gaussian Mixture Models -Hierarchical	
Clustering- Density-Based Clustering (DBSCAN)- Mean-Shift Clustering- Spectral	
Clustering- Association Rule Learning- Apriori Algorithm- FP-Growth	
Algorithm- Dimensionality Reduction- Principal Component Analysis (PCA)- Linear	
Discriminant Analysis (LDA)	
Practical Component	6 Hours
Implementation of clustering algorithms- Identification of patterns- Detection of outliers	0.1
RECOMMENDATION SYTEMS	8 hours
Introduction to Recommendation Systems-Types- Challenges- Collaborative Filtering	
Techniques- User-Based-Collaborative Filtering- Item-Based- Collaborative Filtering-	
Matrix Factorization Techniques- Content-Based Recommendation- Hybrid	
Recommendation Systems - Evaluation of Recommendation Systems	
Practical Component Implementation of Collaborative Filtering-based Recommendations- Implementation of Matrix Factorization-based recommendations- Building a Recommendation system based on item features

Course Content	
SIMPLE AND COMPOUND INTEREST, PROBABILITY	6 Hours
Basic formulae and shortcuts, Difference between simple and compound interest,	
Annual and half-yearly compounding, Incremental and Depreciation Problems, Equal	
Instalments, Probability – Concepts, Probability Laws, Successive and One by one draw	
methods.	
SPEED, TIME AND DISTANCE, PROBLEMS ON TRAINS	6 Hours
Total Distance, Average Speed Calculations, Relative Speed, Train Crossing a Pole,	
Train Crossing a Platform, Bridge, Tunnel, Two Trains Crossing Each other.	

BOATS AND STREAMS, SYLLOGISM	6 Hours
Stream and Boat Moving in Same Direction, Stream and Boat Moving in Opposite	
Directions, Downstream and Upstream Time Calculations, Syllogism - Venn Diagram	
Method, Analytical Method, Possibility-based Syllogisms	
NUMBER SERIES, MIXTURES AND ALLIGATIONS	6 Hours
Missing Numbers Series, Wrong Number Series, Next Number Sequence, Alpha	
Numeric pattern, Number and Letter Series, Rule Alligations, Replacement Problems,	
Mixture Concentration.	
CALENDAR, CLOCKS, PUZZLES	6 Hours
Day, Date, and Year Identification Problems, Clocks - Mirror image, Angle	
Calculations, Odd one out, Pattern recognition, Box-based puzzles Floor-based puzzles	

Theory		Tutorial		Practical	Project		Total
