

KUMARAGURU COLLEGE OF TECHNOLOGY

An autonomous Institution affiliated to Anna University, Chennai

COIMBATORE – 641049

B.E. - ELECTRONICS AND COMMUNICATION ENGINEERING REGULATIONS 2024

CURRICULUM AND SYLLABUS

I to VIII Semesters

(For 2024 Batch students)

**Department of Electronics and Communication
Engineering**

VISION

To be a centre of excellence in education and research by offering an internationally accredited curriculum, state-of-the-art infrastructure, and advanced laboratories that empower students to excel in globally competitive academic and industrial environments.

MISSION

The Department is committed to:

- Inspiring students to cultivate professional ethics, self-confidence, and leadership qualities.
- Enabling students to acquire knowledge and skills through innovative practices to address evolving global challenges and societal needs.
- Pursuing excellence in academics, core engineering domains, and research activities.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

The Programme Educational Objectives of Electronics and Communication Engineering Undergraduate Programme are:

PEO1: Graduates will be successful as Professionals, Researchers or Entrepreneurs in Electronics, Information and Communication Engineering disciplines.

PEO2: Graduates will continuously be updated with state-of the art technology through formal and informal education to provide sustainable solutions.

PEO3: Graduates will demonstrate ethical and social responsibilities as an individual and in a team of diverse cultures.

PROGRAMME OUTCOMES (POs)

PO1: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.

PO2: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)

PO3: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)

PO4: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).

PO5: Create, select and apply appropriate techniques, resources and modern engineering and IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)

Signature of BOS Chairperson, ECE

PO6: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).

PO7: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)

PO8: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

PO10: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Recognize the need for and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

PROGRAMME SPECIFIC OUTCOMES (PSOs)

Graduates of the Electronics and Communication Engineering Programme will have the ability to:

PSO1: Apply principles of signal processing and communication systems to design, develop, and optimize modern communication networks by addressing complex challenges using contemporary tools and technologies.

PSO2: Design, implement, and validate VLSI circuits and embedded systems by leveraging domain knowledge to develop efficient and innovative solutions for diverse engineering applications.

SEMESTER I

24HST101	தமிழர் மரபு / HERITAGE OF TAMILS (Common to all Departments)		L	T	P	J	C
			1	0	0	0	1
HS			SDG	4, 11, 16			
Pre-requisite courses	-	Data Book / Code book (If any)	-				

Course Objectives:

The purpose of taking this course is to:

1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அம்சங்களை அறிமுகப்படுத்துதல், அதன் தொன்மைக்காலம் முதல் நவீனகாலம் வரையிலான வளர்ச்சியை விளக்கம் செய்யுதல். Introduce students to the foundational aspects of Tamil language and literature, tracing its evolution from ancient to modern times.
2	தமிழகத்தின் செழுமையான கலாச்சார பாரம்பரியத்தை அறிமுகப்படுத்துதல், பாறை ஓவியக் கலையிலிருந்து நவீன சிற்ப கலையின்படி அதன் கலை வெளிப்பாடுகளை ஆராய்தல். Familiarize students with the rich cultural heritage of Tamil Nadu, exploring its artistic expressions from rock art paintings to contemporary sculptures.
3	தமிழகத்தின் நாட்டுப்புறக் கலைகள் மற்றும் வீரவிளையாட்டுகளை அறிதல்- திணைக்கோட்பாடுகளை ஆராய்தல்- இந்திய தேசிய இயக்கத்தில் தமிழர்களின் பங்கினை அறிதல். To know the folk arts and heroic ames of Tamilnadu-explore the concept of thinai -to know the role of Tamils in Indian National movement.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அறிவை மேம்படுத்துதல். மொழி பண்பாட்டில் எவ்வாறு இணைந்துள்ளது என்பதை உணர்தல். Enhance the fundamental knowledge of Tamil language and literature	U
CO2	பழங்கால பாறை ஓவியங்கள், சிற்பம் என கலைகள் நவீன காலம்வரை எவ்வாறு பயணிக்கிறது என்பதை புரிந்துகொள்ளுதல். Understand the heritage, rock art paintings to modern art sculpture	U
CO3	நாட்டுப்புறக் கலைகள் தற்காப்புக் கலைகளாகவும், உடல் ஆரோக்கியத்தை மேம்படுத்தும் விதமாகவும் அமைவதை அறிந்து கலைகள் மீதான ஆர்வத்தை அதிகரிக்கச் செய்தல்- தமிழர்களின் அகத்திணை, புறத்திணை கோட்பாட்டினை புரிந்து கொள்ளுதல். இந்திய பண்பாட்டில் தமிழர்களின் பங்களிப்பை அறிதல். Acquire essential knowledge in the folk and martial arts-understanding the Agam and puram concept- to know the contribution of Tamils in Indian culture.	Ap

Course Content

மொழி மற்றும் இலக்கியம்

இந்திய மொழிக் குடும்பங்கள் - திராவிட மொழிகள் - தமிழ் ஒரு செம்மொழி - தமிழ் செவ்விலக்கியங்கள் - சங்க இலக்கியத்தின் சமய சார்பற்ற தன்மை - சங்க இலக்கியத்தில் பகிர்தல் அறம் - திருக்குறளில் மேலாண்மைக் கருத்துக்கள் - தமிழ்க் காப்பியங்கள், தமிழகத்தில் சமண பௌத்த சமயங்களின் தொடக்கம் -பக்தி இலக்கியம், ஆழ்வார்கள் மற்றும் நாயன்மார்கள் - சிற்றிலக்கியங்கள் - தமிழில் நவீன இலக்கியத்தின் வளர்ச்சி - தமிழ் இலக்கிய வளர்ச்சியில் பாரதியார் மற்றும் பாரதிதாசன் ஆகியோரின் பங்களிப்பு.

3 Hours

LANGUAGE AND LITERATURE

Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

மரபு - பாறை ஓவியங்கள் முதல் நவீன ஓவியங்கள் வரை - சிற்பக்கலை

நடுகல் முதல் நவீன சிற்பங்கள் வரை - ஐம்பொன் சிலைகள்- பழங்குடியினர் மற்றும் அவர்கள் தயாரிக்கும் கைவினைப் பொருட்கள், பொம்மைகள் - தேர் செய்யும் கலை - சுடுமண் சிற்பங்கள் - நாட்டுப்புற தெய்வங்கள் - குமரிமுனையில் திருவள்ளுவர் சிலை - இசைக் கருவிகள் - மிருதங்கம், பறை, வீணை, யாழ், நாதஸ்வரம் - தமிழர்களின் சமூக பொருளாதார வாழ்வில் கோவில்களின் பங்கு.

3 Hours

HERITAGE – ROCK ART PAINTINGS TO MODERN ART SCULPTURES

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

நாட்டுப்புறக் கலைகள் மற்றும் வீர விளையாட்டுகள்

தெருக்கூத்து, கரகாட்டம், வில்லுப்பாட்டு, கணியான் கூத்து, ஓயிலாட்டம், தோல்பாவைக்கூத்து, சிலம்பாட்டம், வளரி, புலியாட்டம், தமிழர்களின் விளையாட்டுகள்.

3 Hours

FOLK AND MARTIAL ARTS

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Ciabatta, Valari, Tiger dance - Sports and Games of Tamil

தமிழர்களின் திணைக்கோட்பாடுகள்

தமிழகத்தின் தாவரங்களும், விலங்குகளும் - தொல்காப்பியம் மற்றும் சங்க இலக்கியத்தில் அகம் மற்றும் புறக்கோட்பாடுகள் - தமிழர்கள் போற்றிய அறக்கோட்பாடு - சங்ககாலத்தில் தமிழகத்தில் எழுத்தறிவும், கல்வியும் - சங்ககால நகரங்களும் துறைமுகங்களும் - சங்ககாலத்தில் ஏற்றுமதி மற்றும் இறக்குமதி - கடல்கடந்த நாடுகளில் தமிழர்களின் வெற்றி.

3 Hours

THINAI CONCEPTS OF TAMIL

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

இந்திய தேசிய இயக்கம் மற்றும் இந்திய பண்பாட்டிற்குத் தமிழர்களின் பங்களிப்பு

M. Bhurathi
Signature of BOS Chairperson, ECE

இந்திய விடுதலைப் போரில் தமிழர்களின் பங்கு - இந்தியாவின் பிறப்பகுதிகளில் தமிழ்ப் பண்பாட்டின் தாக்கம் - சுயமரியாதை இயக்கம் - இந்திய மருத்துவத்தில், சித்த மருத்துவத்தின் பங்கு - கல்வெட்டுகள், கையெழுத்துப்படிக்கள் - தமிழ்ப் புத்தகங்களின் அச்ச வரலாறு. CONTRIBUTIONS OF TAMIL TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.	3 Hours

24MAI113	LINEAR ALGEBRA AND MULTIVARIATE CALCULUS (Common to EC, EE, EI)		L	T	P	J	C
			3	0	2	0	4
BS			SDG		7, 9		
Pre-requisite courses	-	Data Book / Code book (If any)	-				

Course Objectives:

The purpose of taking this course is to:

1	provide a solid foundation in linear algebra, focusing on eigenvalues, eigenvectors, matrix transformations, and quadratic forms for practical applications.
2	develop skills in multivariate calculus for solving optimization problems and computing derivatives, integrals, and volumes using double and triple integrals.
3	teach key concepts in vector calculus, including operations like gradient, divergence, curl, and the application of Green's, Gauss's, and Stokes' theorems.
4	introduce fundamental principles of complex analysis, covering analytic functions, Cauchy's theorems, and residue calculus for evaluating integrals through contour integration.
5	equip students with MATLAB proficiency to perform matrix operations, solve optimization problems, compute integrals and verify complex mathematical theorems.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	apply the concepts of eigenvalues, eigenvectors, and the Cayley-Hamilton theorem to diagonalize matrices and perform orthogonal transformations of symmetric matrices using matrix operations and eigenvalue computations.	Ap
CO2	apply orthogonal transformations to reduce quadratic forms to their canonical forms and solve related matrix problems, leveraging to compute transformations and quadratic forms.	Ap
CO3	analyze and solve unconstrained and constrained optimization problems using the Lagrange multiplier method and determine the maxima and minima of functions with two or more variables relevant to engineering applications.	An
CO4	apply double and triple integrals in Cartesian coordinates by computing and using them to determine areas and volumes in engineering applications, including changing the order of integration.	Ap
CO5	apply vector calculus operations like gradient, divergence, curl, and directional derivatives to verify Green's theorem, Gauss's divergence theorem, and Stokes' theorem used for computational verification.	Ap
CO6	apply Cauchy-Riemann equations, Cauchy's integral theorem, and Cauchy's integral formula to solve complex analysis problems and evaluate integrals using the residue theorem for performing contour integration.	Ap

Course Content:

MATRICES

Eigenvalues and Eigenvectors of a real matrix – Properties of eigenvalues and eigenvectors – Cayley Hamilton theorem (excluding proof) - Orthogonal matrices – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.

9 Hours

Practical Component

Introduction to MATLAB - Matrix Operations - Addition, Multiplication, Transpose, Inverse and eigenvalues and eigenvectors of higher order matrices.
Characteristic equation of a Matrix and Cayley-Hamilton Theorem.

6 Hours

FUNCTIONS OF SEVERAL VARIABLES

Total derivative – Taylor's series expansion – Maxima and minima of functions of two variables – Constrained maxima and minima: Lagrange's multiplier method with single constraints – Jacobians.

9 Hours

Practical Component

Determining Maxima and Minima of a function of one variable.
Determining Maxima and Minima of a function of two variables

6 Hours

MULTIPLE INTEGRALS

Double integration in Cartesian coordinates – Change of order of integration - Triple integration in Cartesian coordinates – Applications: Area as double integral and Volume as triple integral.

9 Hours

Practical Component

Double Integral and Area as double integral
Triple Integral and Volume as triple integral

6 Hours

VECTOR CALCULUS

Gradient, divergence and curl – Directional derivative – Irrotational and Solenoidal vector fields - Green's theorem in a plane, Gauss divergence theorem and Stoke's theorem (excluding proofs) – Verification of theorem and simple applications.

9 Hours

Practical Component

Evaluating gradient, divergence and curl.
Verifying Green's theorem in the plane

6 Hours

ANALYTIC FUNCTIONS

Functions of a complex variable – Analytic functions – Necessary and sufficient conditions in Cartesian coordinates, Cauchy- Riemann equations (excluding proofs).

4 Hours

Practical Component

Check analyticity using Cauchy-Riemann equations

3 Hours

COMPLEX INTEGRATION

Cauchy's integral theorem – Cauchy's integral formula –Singularities –Residues – Residue theorem –Application of residue theorem for evaluation of real integrals – Contour Integration (excluding poles on the real axis).

5 Hours

Practical Component

Perform contour integration around a circular contour

3 Hours

M. Bhurathi

		3	0	2	0	4
BS	(Common to EC, EE, EI and MR)	SDG	7, 9, 12			
Pre-requisite courses	-	Data Book / Code book (If any)		-		

Course Objectives:

The purpose of taking this course is to:

1	acquire knowledge of advanced electrochemical energy systems, organic materials, insulating, and high-resistivity materials in electronics to understand their role in modern electronic applications.
2	develop skills to synthesize, analyze, and characterize various electronic materials such as conducting polymers, nanomaterials, and green electronic materials through theoretical and practical approaches.
3	gain competency in evaluating the environmental impact of electronic materials and promote sustainable practices, including green chemistry principles, recycling, and e-waste management.
4	apply advanced concepts of electronic materials to solve real-world engineering problems in the field of energy storage, flexible electronics, and nanoelectronics.
5	enhance analytical and problem-solving abilities through hands-on laboratory experiments, bridging theoretical concepts with practical applications in the electronic materials domain.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	apply electrochemical principles to solve challenges in advanced battery and hybrid energy systems.	Ap
CO2	analyse the properties and synthesis of conducting polymers to compare their applications in flexible electronics and OLEDs.	An
CO3	analyse the applications in electronic components by integrating the properties of insulating and high-resistivity materials.	An
CO4	apply the concepts of nanomaterials to demonstrate their significance in nanoelectronics and electronic sensing technologies.	Ap
CO5	analyse the environmental impact of electronic materials to prioritize the adoption of green chemistry and sustainable electronic practices.	An
CO6	evaluate and recommend innovative eco-friendly electronic materials and recycling strategies to address future environmental challenges.	E

Course Content

ADVANCED ELECTROCHEMICAL ENERGY SYSTEMS

Introduction to electrochemistry for energy systems - Advanced battery technologies (Li-ion batteries, Sodium-ion batteries, Al – air Battery, Zn - air batteries) - Comparison of battery technologies and its challenges.

Hybrid energy storage systems:

Super-capacitors: Electric double-layer capacitors (EDLCs) - Pseudo capacitors - Hybrid supercapacitors

Fuel cells: Principles and recent advancements of Proton exchange membrane fuel cells (PEMFCs) - Solid oxide fuel cells (SOFCs) - Microbial fuel cells - Regenerative fuel cells.

9 Hours

Practical Component:

- Compare the Conductivity of different electrolytes in battery systems.
- Determination of electrical conductivity in electroplated metal coating on substrate.
- Determination of electrode potentials of the cell and construct feasible cell.
- Estimation of mixture of acids using strong base by Conductometric titrations.

12 Hours

ORGANIC MATERIALS FOR ELECTRONIC APPLICATIONS

Introduction to polymers - Classification - Functionality - Degree of Polymerization.

Polymerization: Addition polymerization and its Mechanism (Free Radical, Cationic, and Anionic) - Condensation polymerization – Copolymerization

Conducting materials: Small molecule conductors (Pentacenes and their derivatives) - Engineered Pentacenes and Reversible functionalization - Synthesis and doping of conducting polymers (Polyacetylene and Polythiophene) - Applications of conducting materials in devices (Organic light-emitting diodes (OLEDs), Organic photovoltaics, Flexible and printed electronics)

9 Hours

Practical Component:

- Determination of molecular weight of polymer using Viscometric method.

3 Hours

INSULATING AND HIGH-RESISTIVITY MATERIALS IN ELECTRONICS

Insulating materials in electronics: Introduction (Importance and Key properties) - Classification (Solid, liquid, and gas insulators) - Properties (Dielectric properties and breakdown) - Preparation, properties, and uses of Solid inorganic (Mica and Porcelain) and organic insulators (Bakelite and Rubber) - Liquid insulators (Epoxy resin and Transformer oil) – Gas Insulator (Sulfur hexafluoride)

High Electrical resistivity materials: Factors influencing electrical resistivity - High resistivity materials (Composition, properties, and applications of Manganin and Molybdenum disilicide) - Nanocomposite insulators

9 Hours

Practical Component:

- Determination of pH and Conductivity in different Transformer Oils

3 Hours

NANOMATERIALS AND NANOELECTRONICS

Introduction to nano chemistry - Distinction between molecules, nanoparticles, and bulk materials - Size-dependent properties of nanomaterials - Quantum confinement effects - Carbon nanotubes and graphene (Preparation by Chemical Vapor Deposition and Laser Ablation, Properties and Applications in electronics) - Nanowires (Preparation by Electrochemical Deposition and Electrospinning, Properties and Applications in electronics) – Nanoparticles, nanoclusters, and nanorods (Preparation by Sol-gel, Solvothermal, Properties and Applications in electronics) - Nanotubes and nanowires in sensing applications.

9 Hours

M. Bhurathi
Signature of BOS Chairperson, ECE

Practical Component: Synthesis of Nanoparticle using Solvo-Thermal Method					3 Hours				
GREEN CHEMISTRY AND SUSTAINABLE ELECTRONICS Introduction to sustainable electronics (Importance and Environmental challenges in the electronics industry) - Environmental impact (Conductors, semiconductors, and polymers), Toxicity and persistence of electronic materials - Green chemistry principles in electronics manufacturing (12 principles of green chemistry applied to electronics and Eco-friendly materials and processes) - Life cycle assessment of electronic products - Recycling and e-waste management strategies (Recovery, Challenges and innovations in electronics recycling) - Future trends in eco-friendly electronic materials.					9 Hours				
Practical Component: - Determination of Copper from electronic waste by Complexometric method. - Estimation of copper ion by spectrophotometry. - Estimation of strength of sulphuric acid in spent Battery Electrolytes by pH metry					9 Hours				
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

24CSI101	LOGICAL THINKING AND PROBLEM SOLVING	L	T	P	J	C
		3	0	2	0	4
ES	(Common to all Programmes)	SDG		8, 9		
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	gain a comprehensive understanding of computing systems, including their classification, processing units, memory structures, storage hierarchies, and the essential functions and types of operating systems
2	develop strong logical and analytical thinking skills, enabling the systematic analysis and solution of computational problems using reasoning techniques, algorithms, and flowcharts.
3	acquire a solid foundation in C programming, mastering the use of data types, operators, control structures, and input/output operations to create efficient and effective programs.
4	apply advanced programming techniques, including the use of arrays, structures, pointers, and functions, to solve complex real-world problems with a focus on modular and efficient coding practices.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	understand the basic concepts of hardware, software, Operating systems, and the logic behind the functioning of the Computing systems.	U
CO2	apply logical thinking and reasoning to solve computing problems using tools like algorithms and flowcharts.	Ap
CO3	understand the structured programming paradigms, memory organization and how the language can be used as a tool to solve problems.	U
CO4	develop simple programs using data types, operators, control structures, pointers, and functions as appropriate in real world applications.	Ap

Course Content

FUNDAMENTALS OF COMPUTERS AND COMPUTING Generations of computers, and classification of computers (supercomputers, mainframes, minicomputers, microcomputers). Processing Units (CPU, GPU, TPU), memory (RAM, ROM), storage devices and hierarchy, input / output and peripheral devices. System software, application software. Operating Systems - Functions (process	6 Hours
---	----------------

 Signature of BOS Chairperson, ECE

management, memory management, file system management, device management, security), types of operating systems (desktop, mobile, networking, distributed, real-time, embedded). Number Systems: Introduction to different number systems (binary, octal, decimal, hexadecimal), conversions between number systems, and binary arithmetic (addition, subtraction, multiplication, division).					4 Hours				
Practical Component Exploring hardware and software components									
LOGICAL THINKING, REASONING AND TOOLS Problem Analysis – Logical Thinking vs Critical Thinking vs Design Thinking - Inference – Inductive Reasoning – Deductive Reasoning – Logical Thinking Tools: Algorithms: Definition and importance, characteristics of algorithms (finite, clear and unambiguous, well-defined inputs and outputs, feasible). Algorithm representation Techniques: Pseudocode, stepwise refinement, and top-down design. Flowcharts: Symbols used in flowcharts, creating flowcharts, and examples of flowchart-based problem-solving.					8 Hours				
Practical Component Algorithm writing and Flowcharts,									
PROGRAMMING PARADIGMS AND INTRODUCTION TO C PROGRAMMING Programming Paradigms: Structured programming - functional programming - object-oriented programming. Introduction to C Programming: History of C - features of C - structure of a C program – input / output statements. Data Types: Primitive data types (int, char, float, double) - derived data types, typecast. Operators: Arithmetic operators - relational operators - logical operators - bitwise operators - assignment operators - operator precedence. Conditional Statements: If - if-else - nested if - switch-case. Looping Statements: For loop - while loop - do-while loop. Pre-processor Directives and Command line arguments, Storage Classes.					11 Hours				
Practical Component Programs on Operator precedence, Decision Making, Iterations									
ARRAYS AND STRUCTURES Collections: Arrays – 2D Arrays – String Manipulation. Structures and Unions: Definition - declaration - accessing members - differences between structures and unions - applications.					10 Hours				
Practical Component Programs on Arrays, Structures, Union,									
POINTERS AND FUNCTIONS Pointers: Definition - declaration - pointer arithmetic - pointers and arrays. Functions: Definition - declaration - types of functions (user-defined, library functions) - parameter passing (by value, by reference) pointers and functions, recursion.					10 Hours				
Practical Component Pointers and Functions. Additional programs on Files to be discussed.									
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

Course Content

Introduction to Problem Solving and Ground Rules Introduction to problem-solving strategies without mentioning Design Thinking-Emphasize problem-solving attitudes, mindsets, and behaviours necessary for iterative problem solving (e.g., openness to failure, patience, empathy)-Set ground rules for the course, including incentives for creative risk-taking and penalties for non-participation or lack of reflection-Overview of the Design Thinking process and its importance.	6 Hours
Empathy and Problem Definition	

 Signature of BOS Chairperson, ECE

Techniques for understanding user needs, including observation, interviews, surveys and focus groups -Importance of secondary research as a complement for the above-mentioned methods-Introduction to empathy cycles: involve students in two empathy cycles before and after problem definition-Finetuning problem definition based on user insights.	6 Hours
Ideation and Concept Modelling Brainstorming ideas and selecting feasible solution-Creating concept modelling to visualize ideas-Include an empathy cycle after students propose solutions, allowing them to revisit and reshape their solutions based on further insights from users.	6 Hours
Prototyping and Testing with Models Building basic prototypes using simple materials (e.g., cardboard, clay)- Introduction to different prototyping methods (e.g., low-fidelity vs high-fidelity models) for different contexts: product design, space design, policy, and digital/e-commerce solutions-Conduct an empathy cycle after the prototype is developed to gather user feedback and refine the prototype.	6 Hours
Iteration and Final Modelling Project Students refine their prototypes based on feedback from the empathy cycle-Finalize prototypes for presentation based on consistent feedback loops.	6 Hours
Presentation, Reflection, and Learning Summaries Students present their final projects and reflect on their learning journeys, including how their understanding of problem-solving and empathy evolved during the course- Learning Summary Activity: Each student presents their individual journey and learning outcomes from the empathy cycles and iterations-Peer review and group discussions.	6 Hours

			0	0	2	0	1
ES	(Common to all Departments except CS, IT, AD)		SDG	8, 9, 16			
Pre-requisite courses	-	Data Book / Code book (If any)	-				

Course Objectives:

The purpose of taking this course is to:

1	introduce students to the fundamentals of Artificial Intelligence (AI) and Generative AI, and its key concepts
2	enable students to explore and experiment with common generative AI models and tools for generating text, images, audio, video, and code
3	equip students with the techniques and best practices for crafting effective prompts for AI models

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	understand the fundamentals of AI and generative AI, including its potential impact, issues, limitations, and ethical concerns and its practical use cases in real-world scenarios.	U
CO 2	explore common generative AI models and tools for text, code, image, audio, and video generation.	E
CO 3	apply common prompt engineering techniques and approaches for writing effective prompts.	Ap

SEMESTER II

24HST102	தமிழரும் தொழில்நுட்பமும்/ TAMILS AND TECHNOLOGY	L	T	P	J	C
HS		1	0	0	0	1
		SDG		4, 8		

Pre-requisite courses	-	Data Book / Code book (If any)	-
-----------------------	---	--------------------------------	---

Course Objectives:

The purpose of taking this course is to:

1	தமிழர்களின் நெசவு மற்றும் பாணைத் தொழில்நுட்பத்தை அறிமுகப்படுத்துதல், சங்க கால கட்டிட தொழில்நுட்பத்தை விளக்குதல், கோயில்கள் மற்றும் சிற்பக்கலைகளை ஆராய்தல். introducing weaving and pottery technology of Tamils -Explaining the building technology of the Sangam Period-Explore temples and sculptures.
2	கப்பல், இரும்பு, நாணயங்கள், மணி உருவாக்கும் தொழிற்சாலைகள், ஆகியவற்றை விளக்கம் செய்தல், தமிழகத்தின் தொல்லியல் சான்றுகளின் பழமையை உணர்த்துதல். explain Ship, Iron, Coins, Beads Making Factories. Realizing the Antiquity of Archaeological Evidence of Tamil Nadu
3	வேளாண்மை மற்றும் அறிவியல் தமிழைப் பற்றி அறிதல், இணையத்தில் தமிழின் தேவையை உணர்த்துதல், தமிழ் மென்பொருள்களை அறிமுகம் செய்தல். knowledge of Agricultural and Scientific Tamil, Realizing the need for Tamil on the Internet, Introducing Tamil software.

Course Outcomes:

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	தமிழர்களின் நெசவு மற்றும் பாணைத் தொழில்நுட்பத்தின் முக்கியத்துவத்தினை அறிந்து கொள்ளுதல். சங்ககால தமிழர் வளர்த்த அழகுக் கலைகளைத் தெரிந்து கொள்ளுதல். know the importance of weaving and pottery technology of Tamils-To know the Aesthetics arts developed by Sangam Tamils	U
CO 2	கப்பல் கட்டும் கலை, இரும்புத் தொழிற்சாலை, நாணயங்கள் அச்சடித்தல், மணி உருவாக்கும் தொழிற்சாலைகள், சிலப்பதிகாரத்தில் உள்ள மணிகளின் வகையை அறிதல். knowledge of ship building, ironworks, coinage, minting, and beads making factories, Knowing the types of beads in Silapathikaram.	U
CO 3	வேளாண்மை மற்றும் நீர்ப்பாசன தொழில்நுட்பத்தை அறிந்து கொள்ளல். அறிவியல் தமிழ் மற்றும் கணினித் தமிழைப் புரிந்து கொள்ளுதல். know agriculture and irrigation technology. Understanding Scientific Tamil and Computer Tamil.	Ap

Course Content

நெசவு மற்றும் பாணைத் தொழில்நுட்பம்:

சங்க காலத்தில் நெசவுத் தொழில் - பாணைத் தொழில்நுட்பம் - கருப்பு சிவப்பு பாண்டங்கள் - பாண்டங்களில் கீறல் குறியீடுகள்.
Weaving Industry during Sangam Age - Ceramic technology - Black and Red Ware Potteries (BRW)-Graffiti on Potteries.

3 Hours

வடிவமைப்பு மற்றும் கட்டிடத் தொழில்நுட்பம்:

சங்க காலத்தில் வடிவமைப்பு மற்றும் கட்டுமானங்கள் ரூ சங்க காலத்தில் வீட்டுப் பொருட்களில் வடிவமைப்பு - சங்க காலத்தில் கட்டுமான பொருட்களும் நடுகல்லும் -சிலப்பதிகாரத்தில் மேடை அமைப்பு பற்றிய விவரங்கள் - மாமல்லபுரம் சிற்பங்களும், கோவில்களும் - சோழர் காலத்துப் பெருங்கோயில்கள் மற்றும் பிற வழிபாட்டுத் தலங்கள் - நாயக்கர் காலக் கோயில்கள் - மாதிரி கட்டமைப்புகள் பற்றி அறிதல், மதுரை மீனாட்சி அம்மன் ஆலயம் மற்றும் திருமலை நாயக்கர் மஹால் - செட்டிநாட்டு வீடுகள் - பிரிட்டிஷ் காலத்தில் சென்னையில் இந்தோ-சாரோசெனிக் கட்டிடக் கலை.

3 Hours

Designing and Structural construction House & Designs in household materials during Sangam Age - Building materials and Hero stones of Sangam age Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple)- Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.

உற்பத்தித் தொழில் நுட்பம்:

கப்பல் கட்டும் கலை - உலோகவியல் - இரும்புத் தொழிற்சாலை - இரும்பை உருக்குதல், எஃகு - வரலாற்றுச் சான்றுகளாக செம்பு மற்றும் தங்க நாணயங்கள்- நாணயங்கள் அச்சடித்தல் - மணி உருவாக்கும் தொழிற்சாலைகள் - கல்மணிகள், கண்ணாடி மணிகள் - சுடுமண் மணிகள் - சங்கு மணிகள் - எலும்புத்துண்டுகள் - தொல்லியல் சான்றுகள் - சிலப்பதிகாரத்தில் மணிகளின் வகைகள்.

Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel- Copper and gold- Coins as source of history - Minting of Coins - Beads making- industries Stone beads -Glass beads - Terracotta beads -Shell beads/ bone beads - Archeological evidence - Gem stone types described in Silappathikaram.

3 Hours

வேளாண்மை மற்றும் நீர்ப்பாசனத் தொழில் நுட்பம்:

அணை, ஏரி, குளங்கள், மதகு - சோழர்காலக் குழுமித் தூம்பின் முக்கியத்துவம்- கால்நடை பராமரிப்பு - கால்நடைகளுக்காக வடிவமைக்கப்பட்ட கிணறுகள்- வேளாண்மை மற்றும் வேளாண்மைச் சார்ந்த செயல்பாடுகள் - கடல்சார் அறிவு - மீன்வளம் - முத்து மற்றும் முத்துக்குளித்தல் - பெருங்கடல் குறித்த பண்டைய அறிவு - அறிவுசார் சமூகம்.

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry - Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries - Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

3 Hours

அறிவியல் தமிழ் மற்றும் கணித்தமிழ்:

M. Bhurathi
Signature of BoS Chairperson, ECE

அறிவியல் தமிழின் வளர்ச்சி - கணித்தமிழ் வளர்ச்சி - தமிழ் நூல்களை மின்பதிப்பு செய்தல் - தமிழ் மென்பொருட்கள் உருவாக்கம் - தமிழ் இணையக் கல்விக்கழகம் - தமிழ் மின் நூலகம் - இணையத்தில் தமிழ் அகராதிகள்- சொற்குவைத் திட்டம். Development of Scientific Tamil - Tamil computing- Digitalization of Tamil Books- Development of Tamil Software - Tamil Virtual Academy - Tamil Digital Library - Online Tamil Dictionaries - Sorkuvai Project.	3 Hours

HS		SDG	4, 8			
Pre-requisite courses	-	Data Book / Code book (If any)		-		

Course Objectives:

The purpose of taking this course is to

1	enhance students' abilities to communicate ideas effectively, both orally and in writing, by developing skills in organizing thoughts clearly and logically and expressing them through well-structured paragraphs and concise summaries.
2	enable students to critically evaluate and synthesize information from multiple sources and utilize suitable writing techniques and formats to produce professional-quality content tailored to various contexts.
3	foster active listening, critical reading, and reflective thinking, empowering students to create engaging, relevant, and informative content by applying effective communication strategies across diverse platforms.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	demonstrate proficiency in delivering ideas effectively, both in speaking and writing, with a deeper understanding of the content and the ability to convey complex ideas through well-structured paragraphs and summaries.	Ap
CO2	create and present original content by evaluating information from multiple sources and employing appropriate formats and writing strategies across various professional contexts.	C
CO3	produce engaging and informative content through active listening, reading, reflection, and effective communication skills.	E

24MAI123	COMPUTATIONAL DIFFERENTIAL EQUATIONS (Common to EC, EE, EI)	L	T	P	J	C
		3	0	2	0	4
BS		SDG		7, 9		
Pre-requisite courses		-		Data Book / Code book (If any)		

Course Objectives:

The purpose of taking this course is to:

1	understand the fundamental concepts and methods for solving linear ordinary differential equations (ODEs) of second and higher order, and apply them to real-world engineering problems such as electric circuits.
2	develop proficiency in using Laplace Transform techniques to solve ODEs, particularly in scenarios involving constant coefficients, and apply these methods to practical engineering systems.
3	gain expertise in the application of various numerical methods, including Taylor's series, Euler, Improved Euler, and Runge-Kutta methods, to solve initial value problems for ODEs with a focus on accuracy and efficiency.
4	master the methods of solving partial differential equations (PDEs), including separation of variables and standard techniques for first-order and higher-order PDEs, and understand their application in modeling physical phenomena.
5	apply and evaluate finite difference and other numerical techniques for solving complex engineering problems involving PDEs, such as two-dimensional Laplace's and Poisson's equations, as well as one-dimensional heat and wave equations.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	solve linear ordinary differential equations (ODEs) of second and higher order, including applications in electric circuits.	Ap
CO 2	apply Laplace Transform techniques to solve linear ODEs.	Ap

ORDINARY DIFFERENTIAL EQUATIONS

Linear equations of second and higher order with constant coefficients – Euler’s and Legendre’s linear equations – Method of variation of parameters – First order Simultaneous linear equations with constant coefficients – Applications: Electric Circuits.

9 Hours

Practical Component:

- Solving Second-Order Linear ODEs with Constant Coefficients
- Solving First-Order Simultaneous Linear Equations

7 Hours

SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS USING LAPLACE TRANSFORMS:

Laplace Transform – Properties – Inverse Laplace transforms – Properties – Solution of linear ordinary differential equations with constant coefficients.

9 Hours

Practical Component:

- Using Laplace Transforms to Solve Linear ODEs

4 Hours

NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS

Initial value problems - Single step methods: Taylor’s series method – Truncation error – Euler and Improved Euler methods – Fourth order Runge-Kutta method – Multistep method: Milne’s predictor - corrector method.

9 Hours

Practical Component:

- Numerical Solution Using Taylor's Series Method
- Numerical Solution Using Euler and Improved Euler Methods
- Numerical Solution Using Fourth Order Runge-Kutta Method

9 Hours

PARTIAL DIFFERENTIAL EQUATIONS:

Solution of PDE by variable separable method - solution of standard types of first order partial differential equations (excluding reducible to standard types) - Lagrange’s linear equation – Linear homogeneous partial differential equations of second and higher order with constant coefficients.

9 Hours

Practical Component:

- Solution of PDE by Variable Separable Method

4 Hours

NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS:

Finite difference techniques for the solution of two-dimensional Laplace’s and Poisson’s equations on rectangular domain–Solution of one-dimensional heat equation using Bender Schmidt and Crank Nicholson difference schemes –Solution of one-dimensional wave equation by explicit scheme.

9 Hours

Practical Component:

- Numerical Solution of Two-Dimensional Laplace’s and Poisson’s Equations
- Numerical Solution of Heat Equation Using Bender-Schmidt and Crank-Nicholson Methods.

6 Hours

Theory	Tutorial	Practical	Project	Total

24PHI102	APPLIED PHYSICS FOR CIRCUIT ENGINEERING	L	T	P	J	C
		3	0	2	0	4
BS	(Common to EC, EE, EI an MR)	SDG		9		

Pre-requisite courses	Higher Secondary	Data Book / Code book (If any)	-
------------------------------	-------------------------	---------------------------------------	----------

Course Objectives:

The purpose of taking this course is to:

1	discover the fundamental concepts of light-matter interactions, including emission, absorption, and Einstein's theory's presentation of stimulated emission's quantum mechanical foundations.
2	comprehend the principles of quantum mechanics, including wave-particle duality, the significance of the wave function, and quantum tunnelling.
3	examine various sources of green energy, including solar, wind, and ocean energy, and assess their efficiency and practical applications.
4	study the properties of semiconductors, magnetic materials, including carrier concentration, transport phenomena, and applications of the Hall effect in sensors.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply the principles of applied optics to demonstrate the operation of laser systems and their applications.	Ap
CO 2	apply quantum mechanical concepts to solve problems related to wave-particle duality and quantum tunnelling.	Ap
CO 3	apply principles of green energy technologies to assess their efficiency and practical applications.	Ap
CO 4	Understanding semiconductor physics concepts to analyze carrier transport phenomena and properties of semiconductor devices.	U
CO 5	apply knowledge of magnetic materials to evaluate their properties and uses in modern applications like spintronics.	Ap
CO 6	apply optics, quantum physics, green energy, and semiconductor physics methods to design practical solutions in experimental setups.	Ap

Course Content

APPLIED OPTICS	9 Hours
-----------------------	----------------

M. Bhurathi
Signature of BoS Chairperson, ECE

Interaction of light and matter - Quantization of electromagnetic radiation – Absorption, Spontaneous emission and Stimulated emission - Einstein's theory of stimulated emission- Population inversion - Sources of excitation - Active medium -Laser beam output- Nd-YAG laser - CO₂ laser - Applications – Laser Imaging, Holography and Laser gyroscopes. Practical Component - Semiconductor laser: - Determination of wavelength of laser - Determination acceptance angle and numerical aperture of an optical fibre. - Determination of particle size - Spectrometer – Determination of wavelength of mercury source using grating	6 hours
QUANTUM PHYSICS Necessity of quantum mechanical picture - Planck's concept (hypothesis) - Wave-particle duality - de-Broglie waves - Physical significance of wave function - Schrodinger equation (Time independent and time-dependent) - Particle in a box- Eigen values and Eigen function- Superposition Principle - Quantum mechanical tunnelling through a barrier Practical Component - Compound pendulum – Determination of acceleration due to gravity - Determination of Planck's constant –electroluminescence method.	9 Hours
GREEN ENERGY Introduction to Green energy – Solar energy: Energy conversion by photovoltaic principle – Solar cells – Efficiency measurements – Types (First, Second and Third Generation) - Wind energy: Basic components and principle of wind energy conversion systems – Ocean energy: Wave energy – Wave energy conversion devices. Futuristic Energy: Hydrogen – Methane Hydrates – Carbon capture and storage (CCS). Practical Component - Determination of efficiency of solar cell - Melde's string – Determination of frequency of a tuning fork	9 Hours
SEMICONDUCTOR PHYSICS Semiconductors - Intrinsic and extrinsic semiconductors - Variation of carrier concentration with temperature and impurity concentration - Carrier transport in Semiconductors: Drift, mobility and diffusion – Hall Effect in Semiconductors – Applications of Hall Effect - Magnetic field sensor, current sensor, and position sensor - Ohmic contacts: concept and importance - Schottky diode – construction and working - energy band diagram, I-V characteristics. Practical Component - Determination of band gap of a semiconductor - Determination of thermal conductivity of a bad conductor – Lee's Disc method - Non-uniform bending – Determination of Young's modulus	9 Hours
MAGNETIC MATERIALS Introduction – Bohr magnetron - types of magnetic material – Hysteresis behaviour – Energy product - Hard and soft magnetic materials - Magnetic Anisotropy- Spintronics and Magnetic Semiconductors- Applications – GMR - MRAM (Magnetoresistive Random Access Memory) - Nanomagnetic Materials - Magnetocaloric Materials – Magnetic Materials in Renewable Energy – Magnetic levitation. Practical Component Determination of magnetic susceptibility of a solid material – B-H curve apparatus	9 Hours

24MEI103	COMPUTER AIDED ENGINEERING GRAPHICS (Common to EE, EC, EI, BT)		L	T	P	J	C
			2	0	2	0	3
SDG			9, 12				
Pre-requisite courses			-		Data Book / Code book (If any)		-

Course Objectives:

The purpose of taking this course is to:

1	understand the fundamental principles of engineering graphics and their significance.
2	develop proficiency in freehand sketching, usage of drawing instruments, and lettering.
3	gain competency in using computer graphics technologies for graphical communication, including isometric views and various coordinate systems (absolute, relative, polar)

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	apply the principles of engineering graphics to create accurate orthographic and isometric projections	Ap
CO2	design free-hand sketches of orthographic views from pictorial representations to improve spatial understanding and communication of engineering concepts	C
CO3	apply CAD software tools to create, edit, and annotate technical drawings and analyse them using ISO and ANSI standards	Ap
CO4	analyse the parametric and non-parametric CAD models, producing detailed two-dimensional documentation, including sectional views and annotations.	An
CO5	apply geometric and topological concepts to design 3D models for additive manufacturing.	Ap
CO6	apply the principles of engineering graphics to create accurate orthographic and isometric projections	Ap

Course Content

Introduction to Engineering Drawing Principles of Engineering Graphics and their significance, Freehand sketching, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute.	6 Hours
Orthographic and Isometric Projections	6 Hours

 Signature of BoS Chairperson, ECE

Principles of Orthographic Projections-Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.	6 Hours
Overview of Computer Graphics Listing the computer technologies that impact on graphical communication, Isometric Views of lines, Planes, Simple and compound Solids, Coordinates system - Absolute Coordinates, Relative Coordinates, Polar Coordinates.	6 Hours
Customization & CAD Drawing Setting up modules and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerancing; Orthographic constraints, Snap to objects manually and automatically; Isometric Projections and Solids.	6 Hours
Annotations, layering & other functions Layers to create drawings, create, edit and use customized layers; orthographic projection techniques; Drawing sectional views of composite right regular geometric solids and projecting the true shape of the sectioned surface; Drawing annotation, Computer-aided design (CAD) software modeling of parts and assemblies. Part editing and two-dimensional documentation of models, Shape extractions (Freeform modelling). Planar projection theory includes sketching of perspective, isometric, Multiview, auxiliary, and section views. Spatial visualization exercises – Transformation, Rendering and Lighting. Geometry and topology of engineered components: Introduction to Additive manufacturing (AM); Exporting the 3D model.	4 Hours 8 Hours

DIODES AND THEIR APPLICATIONS Structure, operation and VI Characteristics of PN junction diode, Zener diode - Diffusion and transition capacitances of PN junction diode - LEDs and Photo diodes - Applications of diodes: Clippers and Clampers - Half wave and Full wave rectifiers with filter - Zener voltage regulator.											6 Hours	
Practical Component - Design of Clipper and Clamper circuit. - Half wave and full wave rectifiers with filter. - Design of Voltage regulator using Zener diode.											9 Hours	
BJT AND MOSFET BJT - Structure, operation and VI characteristics - Load line, Quiescent point, CE, CB and CC configurations - Biasing: Fixed base bias, voltage divider bias, emitter bias - BJT as a switch. MOSFET - Structure, operation and VI characteristics - Enhancement and Depletion modes - Biasing of MOSFET: CS configuration - BJT vs MOSFET.											10 Hours	
Practical Component - Characteristics of BJT under CE configuration. - Characteristics of MOSFET under CS configuration.											6 Hours	
SMALL SIGNAL AMPLIFIERS USING BJT AND MOSFET BJT small signal model, Analysis of CE amplifier - Gain and frequency response - MOSFET small signal model: Analysis of CS Amplifier and Source follower, Gain and frequency response - High frequency analysis of BJT and MOSFET.											10 Hours	
Practical Component - Frequency response of CE amplifier. - Frequency response of CS amplifier.											6 Hours	
MULTISTAGE, DIFFERENTIAL AND TUNED AMPLIFIERS RC coupled amplifier, Differential amplifier - Common mode and Difference mode analysis, CMRR - Tuned amplifiers: Single tuned and double tuned - Gain and frequency response.											9 Hours	
Practical Component Analysis of RC coupled amplifier.											3 Hours	
LARGE SIGNAL AMPLIFIERS AND OSCILLATORS Advantages of negative feedback - Voltage, Current, Series, Shunt feedback amplifiers - Power amplifiers: Class A, Class B and Class C amplifiers - Analysis of Class B push-pull power amplifier. Positive feedback - Conditions for oscillations, RC phase shift, Wien bridge Hartley, Colpitts and Crystal oscillators.											10 Hours	
Practical Component - Analysis of Class B push-pull power amplifier. - Design of RC phase shift oscillator.											6 Hours

Course Content

ADVANCED MINDFULNESS AND MEDITATION: - Deepening mindfulness practices for enhanced mental clarity. - Exploring different forms of meditation (e.g., guided, transcendental, movement-based). - Hands-on activity: Daily meditation practice and journaling reflections.	6 Hours
EMOTIONAL RESILIENCE AND MENTAL HEALTH: - Building emotional resilience through positive psychology practices. - Cognitive-behavioural strategies for managing stress and anxiety. - Hands-on activity: Developing and practicing a resilience toolkit.	6 Hours
SOCIAL AND ENVIRONMENTAL WELLNESS: - The impact of social connections and community on wellness. - Creating a supportive environment for personal growth. - Hands-on activity: Building a community wellness project or group activity.	6 Hours
INTERNAL GROWTH AND PURPOSE:	6 Hours

 Signature of BoS Chairperson, ECE

- Exploring the deeper aspects of internal wellness and self-actualization. - Reflective practices for discovering life purpose and meaning. - Hands-on activity: Creating a vision board or personal mission statement.					
SUSTAINING WELLNESS PRACTICES: - Strategies for maintaining wellness habits over the long term. - Adapting wellness plans to life changes and challenges. - Hands-on activity: Revising and finalizing a long-term personal wellness plan.					6 Hours
Theory Hours:	0	Tutorial Hours:	0	Practical Hours:	30
				Project Hours:	Total Hours: 30

SEMESTER III

24HSP005	Mastering Conversations	L	T	P	J	C
		0	0	2	0	1
HS		SDG		4 & 8		
Pre-requisite courses	NIL	Data Book / Codes / Standards (If any)			NIL	

Course Objectives:	The purpose of taking this course is to:
1	Demonstrate understanding of different perspectives by analyzing complex personal and professional situations.
2	Engage in thoughtful dialogue and discussions about complex, real-world issues, utilizing critical thinking to assess different viewpoints.
3	Apply role-playing as a tool to enhance understanding of workplace dynamics, conflict resolution, and team collaboration.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Empathize with and understand people in both professional and personal contexts, reflecting on situations from multiple perspectives and participating in activities that mirror career-related scenarios.	Ap
CO 2	Analyze and converse critically on complex subjects, demonstrating the ability to approach and deal with various social contexts effectively.	An
CO 3	Exhibit skills in role-playing and enacting given situations to navigate diverse social interactions and career-related contexts.	C

	Program Outcomes (PO) (Strong-3, Medium – 2, Weak-1)											Program Specific Outcomes (PSO)		
	1	2	3	4	5	6	7	8	9	10	11			
Course Outcomes (CO)	Engineering Knowledge	Problem Analysis	Design/Development of Solutions	Conduct Investigations of	Engineering Tool Usage	The Engineer and The World	Ethics	Individual and Collaborative Team	Communication	Project Management and Finance	Life-Long Learning	PSO-1	PSO-2	PSO-3
1						3			3	2	3

<u>Course Content</u>	
Practical Component / Roleplays Dynamics Introduction to Role play - Benefits of role plays - Importance of gesture, tone and modulation-Skill development through role play activities - Types of role plays -Conversation Building through communicative functions-Initiating a dialogue- Framing questions- Receiving feedback.	6 Hours

 Signature of BoS Chairperson, ECE

Practical Component /Roleplays on Social Skill Social Interactions: - (Ordering food at a restaurant- Making a reservation at a hotel-- Shopping at a store-- Attending a party or social gathering). Travel and Tourism:(Asking for directions- Booking a flight or hotel-- Exploring a new city- Interacting with local people). Community and Volunteering:(Participating in a charity event- Volunteering at a local organization- Discussing community issues- Organizing a community project).	6 Hours
Practical Component / Roleplays on Education and Technology Education and Personal Growth: (Setting goals (Short term & Long term)- Creating a study plan - Participating in a workshop - Reflecting on personal growth) Technology and Online Interactions: (Participating in an online meeting- Creating a social media post- Writing an email or text message- Making an online purchase) Technology and Science: (Explaining a scientific concept- Discussing emerging technologies- participating in Hackathons- Presenting a research paper)	6 Hours
Practical Component / Roleplays on Strategic Insights Critical Thinking: (Evaluating a news article-solving a moral dilemma-Decision with incomplete information-Assessing a historical event) Problem-Solving: (Resolving a conflict- Negotiating a deal - Making a complaint- Apologizing for a mistake) Business and Entrepreneurship: (Pitching an idea- Negotiating a contract- Conducting a market Research - Presenting a product launch)	6 Hours
Practical Component / Roleplays on Cultural Exchange Cultural Exchange: (Sharing customs and traditions- Discussing cultural differences- Exploring historical events- Participating in a cultural festival) Media and Entertainment: (Event planning- Creating an advertisement-Digital Marketing-Conducting interviews- Creating news broadcast-Writing and Performing a script- Enacting one act plays) Arts and Culture: (Visiting an art gallery - Attending/ organizing a concert or play - Discussing literature- Creating a piece of art)	6 Hours
Theory 0 Hours:	Tutorial 0 Hours:
Practical 30 Hours:	Project 0 Hours:
Total 30 Hours:

HS						SDG		3,4,5,10,12,13,14,15,16,17						
Pre-requisite courses		-		Data Book / Code book (If any)			-							
Course Objectives:														
The purpose of taking this course is to:														
1	Introduce the concept and significance of value education in shaping a meaningful and fulfilling life.													
2	Enable students to understand the human being as a co-existence of self and body and the harmony within.													
3	Develop an understanding of harmony in relationships, family, and society.													
4	Help students appreciate the interconnectedness and harmony in nature and existence.													
5	Instill the importance of ethical behaviour in personal, professional, and social contexts.													
Course Outcomes														
After successful completion of this course, the students shall be able to										Revised Bloom's Taxonomy Levels (RBT)				
CO1	Understand the foundational concepts of value education and human aspirations.									U				
CO2	Analyze the human being as a holistic entity comprising self and body.									An				
CO3	Evaluate and cultivate harmonious relationships within the family and society.									E				
CO4	Interpret the interconnectedness in nature and recognize harmony in existence.									U				
CO5	Apply holistic understanding to professional ethics and sustainable living.									Ap

24ECT201	Electromagnetic Waves and Waveguides	L	T	P	J	C
		3	0	0	0	3
PC		SDG	3, 9, 15			
Pre-requisite courses	24PHI102	Data Book / Code book (If any)		-		

Course Objectives:

The purpose of taking this course is to:

1	Introduce the fundamental laws governing static and time varying electric and magnetic fields.
2	Teach the behaviour of electromagnetic fields in different materials.
3	Equip the students to derive wave propagation characteristics and boundary conditions using Maxwell's equations.
4	Provide the solution through wave equations for lossy and lossless media, and analyze the effects in conductors, dielectrics, and free space.
5	Make the students to design and evaluate waveguide structures for practical applications.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply fundamental laws of electromagnetics to solve problems involving static electric and magnetic fields.	Ap
CO2	Analyze the behaviour of fields in electric and magnetic materials.	An
CO3	Apply the implications of electromagnetic concepts to derive Maxwell's equations	Ap
CO4	Build solutions using wave equations for conducting and non-conducting media.	E
CO5	Design and evaluate modes in rectangular waveguide.	C

ES		3	1	0	0	4
		SDG	9, 11			
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	Introduce the fundamental concepts of continuous and discrete time signals and systems and their properties.
2	Enable the students to represent CT and DT signals using Fourier Series and Fourier Transform
3	Enable the students to analyze the CT and DT systems using Fourier transform.
4	Equip the students to apply Z-Transform for analysis and characterization of discrete-time systems.
5	Provide a strong foundation in sampling theory and reconstruction techniques.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Distinguish different types of signals and systems.	An
CO 2	Analyze Continuous Time signals and system using Fourier Series and Fourier Transform.	An
CO 3	Analyze Discrete Time signals and system using Fourier Series and Fourier Transform.	An
CO 4	Apply the Z-Transform to analyze and interpret discrete-time signals and systems.	An
CO 5	Explain sampling of continuous time signals.	U

24ECI203	Linear Integrated Circuits (Common to ECE, EEE, E&I)		L	T	P	J	C
3			0	2	0	4	
PC			SDG		3, 9		
Pre-requisite courses	24ECI102, 24EII101		Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	Introduce operational amplifiers, their structure, configurations, and characteristics.
2	Enable the students to design and analysis of analog circuits using op-amps and special ICs.
3	Equip the students to use the filters and waveform generators in appropriate applications.
4	Provide the knowledge on Analog to Digital and Digital to Analog techniques.
5	Equip the students to acquire practical skills through hands-on experiments with linear integrated circuits.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Describe op-amp structure, stages, and characteristics through basic experiments.	U
CO 2	Analyze and implement inverting, non-inverting, and differential amplifiers using op-amps.	An
CO 3	Analyze op-amp circuits such as adders, subtractors, integrators, differentiators, clippers, and clampers.	An
CO 4	Design and evaluate filters and waveform generators using op-amps and IC 555.	C
CO 5	Apply DAC and ADC techniques using R-2R, weighted resistor, flash, SAR, and dual-slope converters.	Ap
CO 6	Evaluate voltage regulator ICs through experiments and analyse the working of PLLs and VCOs in frequency control and modulation.	E

Course Content	
BASICS OF OPERATIONAL AMPLIFIERS Basics of Operational Amplifiers – Ideal Operational Amplifier – General operational amplifier stages and internal circuit diagrams of IC 741, DC and AC performance characteristics, Open and closed loop configurations – Voltage follower, Inverting amplifier, Non-inverting amplifier, Differential amplifier.	9 Hours
PRACTICAL COMPONENT Inverting and non-inverting amplifiers	3 Hours
APPLICATIONS OF OPERATIONAL AMPLIFIERS Adder and subtractor, Instrumentation amplifiers, V-to-I and I-to-V converters, Differentiators and Integrators, Precision rectifiers, Wave shaping circuits (Clipper and Clampers), Log and Antilog amplifiers, Analog voltage multiplier circuit and its applications, Comparators, Schmitt trigger.	9 Hours
PRACTICAL COMPONENT - Adder and subtractor - Integrator and differentiator - Clipper and clamper	9 Hours
FILTERS AND WAVEFORM GENERATORS Filters: Comparison between passive and active filters, Active filters: Low-pass, high-pass and band-pass filters – Waveform Generators: Sine, Square, Triangle, Sawtooth wave generators – IC 555 Timer: Monostable operation and its applications, Astable operation and its applications.	9 Hours
PRACTICAL COMPONENT - Active filters - Waveform generation - Astable and Monostable multivibrators using IC 555 Timer	9 Hours
DIGITAL TO ANALOG AND ANALOG TO DIGITAL CONVERTERS D/A converter: Specifications, Weighted resistor type, R-2R ladder type – Sample and hold circuit – A/D Converter: Specifications, Flash type, Successive Approximation type, Dual Slope type, Sigma-delta converter.	9 Hours
PRACTICAL COMPONENT - Digital to Analog conversion - Analog to Digital conversion	6 Hours
SPECIAL FUNCTION ICs IC Voltage regulators: Three terminal fixed and adjustable voltage regulators, IC 723 general purpose regulator, Monolithic switching regulator – Frequency to Voltage and Voltage to Frequency converters – PLL: Operation of PLL, Voltage Controlled Oscillator, PLL applications: AM and FM detection, FSK modulation and demodulation and frequency multiplier.	9 Hours
PRACTICAL COMPONENT IC Voltage regulator	3 Hours

Course Objectives:

The purpose of taking this course is to:

1	Impart foundational knowledge of number systems, binary codes, Boolean algebra, and logic simplification techniques.
2	Develop analytical and practical skills in designing and implementing combinational and sequential circuits
3	Build competency in digital system design using state machine, programmable logic devices like FPGA and Verilog HDL programming.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Apply number systems and Boolean algebra to design basic digital circuits.	Ap
CO 2	Design and analyze the structure and functionality of various combinational circuits.	An
CO 3	Interpret the logic flow of sequential circuits and analyze their performance under different design constraints.	An
CO 4	Examine state transitions and circuit behaviour in synchronous sequential circuits using state diagrams and tables.	An
CO 5	Apply Verilog HDL constructs with various modelling styles to simulate and test digital logic circuits.	Ap
CO 6	Develop, simulate and implement digital systems using logic gates and simulation tools.	E

Course Content

FUNDAMENTALS OF DIGITAL SYSTEMS	9 Hours
--	----------------

Review of number systems, Logic gates, Binary codes and code converters - Boolean algebra and theorems - Sum of Product and Product of Sum simplification - Canonical forms - minterm and maxterm - Simplification of Boolean expressions - Karnaugh map (upto 4 variables). Basic IC Terminologies, Characteristics of Digital Logic families: TTL, ECL and CMOS logic. Practical Component • Implementation of Boolean Function using Gates. • Implementation of code converters using K-map.	6 Hours
--	----------------

Practical Component • Implementation of Boolean Function using Gates. • Implementation of code converters using K-map.	6 Hours
--	----------------

DESIGN OF COMBINATIONAL LOGIC CIRCUITS	9 Hours
---	----------------

Design of Combinational Circuits: Adders, Subtractors, Parallel Adder, Carry Look Ahead Adder, Digital Comparator, Parity Generator/Checker, Encoder, Decoder, Multiplexer, De-Multiplexer, Implementation of Boolean function using Multiplexer. Practical Component • Design and implementation of Adder / Subtractor circuits. • Design of combinational circuit using MUX/DEMUX.	6 Hours
--	-----------------------

Course Objectives:

The purpose of taking this course is to:

1	Provide students with exposure to real-world industrial and professional practices.
2	Enhance communication, interpersonal, and teamwork skills.
3	Foster ethical responsibility and a professional attitude in engineering work environment.
4	Enable students to apply engineering knowledge and acquired skills in solving workplace challenges.
5	Create pathways for employment through professional experience.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Develop communication, interpersonal, and critical skills essential for succeeding in interviews.	Ap
CO2	Demonstrate ethical behavior and adhere to professional standards in an industrial setting.	Ap
CO3	Communicate and collaborate effectively both within and beyond the team environment.	Ap
CO4	Address real-world workplace challenges by analyzing situations and applying relevant skills gained during the course.	An
CO5	Build professional networks that may lead to full-time employment after graduation.	E
CO6	Cultivate the work ethic and professional attitude required for a successful career.	Ap

		0	0	2	0	1
HS		SDG		4 & 8		
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	To equip learners with techniques for organizing and presenting ideas effectively, ensuring logical flow and engaging delivery through appropriate visual and verbal strategies.
2	To enhance students' ability to evaluate diverse viewpoints and articulate reasoned arguments, fostering meaningful participation in collaborative discussions.
3	To strengthen students' ability to adapt their speaking style and content to different audiences and contexts, utilizing digital tools for enhanced presentation effectiveness.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Create and deliver structured presentations with a clear introduction, body, and conclusion, utilizing effective visual tools and appropriate pacing to enhance clarity and impact.	C
CO 2	Analyze issues from multiple perspectives, articulate ideas effectively within group discussions	An
CO 3	Deliver confident presentations and speeches in professional and social settings, leveraging digital tools and technologies to enhance quality and effectiveness.	Ap

Course Content	
MODULE 1 Introduction to Group Discussions - Key skills for effective participation - Phases in a GD - Conversational Phrases in GD. Group Dynamics - Understanding group roles and dynamics - Conflict resolution and management in groups - Techniques for fostering collaboration. Presentations - Introduction to Visual Aids and Technology in Presentations. Delivery Techniques - Voice modulation and speech clarity - Body language and gestures - audience analysis. Handling Q&A Sessions - Preparing for audience questions - Techniques for handling difficult questions - Mock Presentation with Q&A sessions.	6 Hours
MODULE 2 Factual Group Discussions: Focus on sharing and verifying accurate information on a given topic. Participants base their contributions on verifiable data and concrete evidence. Opinion-based / Argumentative Group Discussion: Encourages participants to express and defend their point of view on a topic. Evaluate different perspectives and build critical thinking skill.	6 Hours
MODULE 3 Case Study Group Discussion: Involves analyzing the complexities, identifying key issues, and developing insights or solutions based on the group's collective knowledge. Abstract Discussion: Deals with intangible concepts, ideas, or themes without concrete reference points. Encourages creative thinking and theoretical exploration.	6 Hours
MODULE 4 Impromptu Presentations: Participants speak on a given topic with little to no preparation. Helps develop quick thinking and effective communication skills. Informative Presentation: Aims to educate the audience on a specific topic by providing clear, factual information. The focus is on clarity, accuracy, and comprehensiveness. Demonstrative Presentation: Interactive sessions where participants engage in hands-on activities to learn practical skills. Often includes exercises, demonstrations, and collaborative tasks.	6 Hours
MODULE 5 Training and Technical Presentation: Designed to teach specific technical skills or procedures. Includes detailed instructions, demonstrations, and may involve technical jargon. Academic Presentation: Involves presenting research findings or theoretical concepts in an academic setting. Emphasizes clarity, evidence-based arguments, and adherence to scholarly standards.	6 Hours

 Signature of BOS Chairperson, ECE

Pitch Presentation: A concise, persuasive presentation aimed at securing support, investment, or approval. Focuses on the value proposition, potential benefits, and unique selling points. Persuasive Presentation: Seeks to convince the audience to adopt a particular viewpoint or take a specific action. Utilizes logical arguments, emotional appeals, and credible evidence. Multimedia Presentations: Uses visual and auditory media to convey information and present arguments. Enhances engagement and aids in illustrating complex concepts.

24MAT242	RANDOM PROCESSES AND SPECTRAL ANALYSIS IN COMMUNICATION (ECE)	L	T	P	J	C
		3	1	0	0	4
BS		SDG	4, 7, 9			
Pre-requisite courses		-	Data Book / Codes / Standards (If any)		Normal Distribution Table	

Course Objectives

The purpose of taking this course is to:

1	introduce the fundamental concepts of probability theory, random variables, and their distributions to establish a strong theoretical foundation for analyzing communication systems.
2	teach various probability distributions including Binomial, Poisson, Gaussian, Uniform, and Exponential distributions, and explain their applications in communication systems.
3	develop students' understanding of two-dimensional random variables, joint distributions, and statistical dependencies through correlation and regression analysis.
4	explain the characteristics of random processes, stationary processes, ergodic processes, and their relevance in analyzing signals and noise in communication systems.
5	impart knowledge on auto correlation functions and spectral analysis techniques, including power spectral density and the Wiener-Khintchine relation for frequency domain characterization of random signals.

Course Outcomes

After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	apply probability theory, Bayes' theorem, and analyze discrete and continuous random variables using probability density and distribution functions.	Ap
CO 2	evaluate various probability distributions (Binomial, Poisson, Gaussian, Uniform, Exponential) and apply the Central Limit Theorem in practical scenarios.	E
CO 3	analyze joint, marginal, and conditional distributions of two-dimensional random variables and compute correlation and regression parameters.	An
CO 4	characterize random processes including stationary, ergodic, Gaussian, Markov, and Poisson processes for communication system analysis.	An
CO 5	analyze autocorrelation, cross-correlation functions, and compute power spectral densities using Wiener-Khintchine relations for signal processing applications.	An

		1	0	2	0	2
HS		SDG	6, 13, 15			
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	To introduce the importance, types, and conservation strategies of natural resources, with a focus on sustainable practices in water and food management.
2	To understand the structure and function of ecosystems and biodiversity, and explore the need for conservation through the study of hotspots and global environmental concerns.
3	To examine the causes and effects of environmental degradation, including pollution and waste management, and to promote mitigation strategies for sustainable development.
4	To provide knowledge of the legal and institutional frameworks for environmental protection in India and globally, including critical environmental acts and enforcement challenges.
5	To explore conventional and alternative energy resources, and to assess methods for energy conservation and carbon footprint reduction through audits and sustainability measures.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Apply the concept of natural resource conservation to demonstrate sustainable practices	Ap
CO 2	Analyse the structure, function, and adaptive capacity of ecosystems to categorize threats and conservation strategies for biodiversity.	An
CO 3	Analyse various forms of environmental degradation and propose management and preventive solutions.	An
CO 4	Apply national environmental laws and frameworks in the personal and professional contexts	Ap
CO 5	Design strategies using renewable energy principles to develop sustainable energy utilization plans through audits and footprint analysis to transfer a healthy environment for future generations.	Ap

		3	0	0	0	3
PC		SDG		9		

Pre-requisite courses	24ECT201	Data Book / Code book (If any)	
------------------------------	----------	---------------------------------------	--

Course Objectives:

The purpose of taking this course is to:

1	Acquire fundamental knowledge of transmission line parameters, propagation characteristics, and high-frequency effects.
2	Analyze the behaviour of transmission lines under high frequency operations.
3	Understand and apply scattering parameters for two-port RF networks.
4	Use impedance matching techniques to design RF circuits.
5	Understand the operating principles, characteristics, and design considerations of active RF components.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Analyze transmission line characteristics and behaviour under different conditions.	An
CO 2	Apply Smith Chart techniques for impedance transformation and matching of RF transmission lines.	Ap
CO 3	Analyze and interpret S-parameters of two-port RF networks.	An
CO 4	Design impedance matching networks using lumped/distributed techniques for RF applications.	Ap
CO 5	Analyze the behavior and performance of active RF semiconductor devices and design basic RF sub-circuits.	An

Course Content	
TRANSMISSION LINE THEORY Transmission lines - Types - Line parameters - General solution of the transmission line - Voltage and Current expressions on the line - The infinite line - Input impedance - Characteristic Impedance - Propagation constant - Reflection coefficient - Distortion and Distortionless lines, loading, waveform shaping - Transfer impedance, Reflection and Insertion losses.	10 Hours
TRANSMISSION LINE AT RADIO FREQUENCIES Standing waves and standing wave ratio on a line - Eighth wave line - Quarter wave line and half wave line - Smith chart - Applications of Smith chart - Problem solving using Smith chart - Single stub matching and Double stub matching. Case Study: Failure Diagnosis of a 50-Ω Coaxial Feed Line in a Satellite Ground Station.	10 Hours
TWO PORT RF NETWORKS RF Spectrum and Frequency Bands, S Parameters - Formulation of S Parameters, Properties of S Parameters, Reciprocal and Lossless Network, RF behaviour of Resistors, Capacitors and Inductors, Surface Mount Device considerations.	07 Hours
RF IMPEDANCE MATCHING NETWORKS Importance of impedance matching at high frequencies - Components used in matching: Lumped vs. Distributed - Matching Networks using L, Pi, and T configurations - Design using Lumped elements: RC, RL, RLC circuits.	09 Hours
RF SYSTEM DESIGN CONCEPTS Active RF components: Semiconductor basics in RF, bipolar junction transistors, RF field effect transistors, High electron mobility transistors Basic concepts of RF design, Mixers, Low noise amplifiers, voltage control oscillators, Power amplifiers, transducer power gain and stability considerations. Case Study: Designing a Low-Noise Amplifier (LNA) for a 5G NR mmWave Small Cell.	09 Hours

			3	0	2	0	4
PC			SDG		4,9,7,11		
Pre-requisite courses	24ECT202	Data Book / Code book (If any)			NIL		

Course Objectives:

The purpose of taking this course is to:

1	Analyze signals in the frequency domain and compute spectra efficiently using FFT.
2	Design and implement efficient digital filters using analog prototypes and transformations.
3	Create linear-phase filters using windowing methods and ensure phase accuracy.
4	Study quantization impacts and ensure filter accuracy in limited precision hardware.
5	Understand DSP processor structure for optimized implementation of signal processing algorithms.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Analyze DFT algorithm and properties and its applications in signal processing	An
CO 2	Design and implement an IIR filter to meet the requirements of a specified application	An
CO 3	Assess the design methods and implementation of FIR filters	An
CO 4	Examine the effects of quantization and round-off in digital system implementation and their impact on the system performance	Ap
CO 5	Evaluate the architecture of DSP processor	Un
CO6	Create and verify DSP concepts for signal processing applications through simulation and DSP processor	E

3			0	2	0	4	
PC			SDG		9		
Pre-requisite courses	24ECI203, 24EEI203		Data Book / Code book (If any)		-		

Course Objectives:

The purpose of taking this course is to:

1	Introduce the principles of MOSFET operation and modelling.
2	Provide a comprehensive understanding of CMOS logic families.
3	Familiarize learners with the design of arithmetic subsystems and memory structures.
4	Expose learners to FPGA architectures and SoC design principles.
5	Provide foundational knowledge of semiconductor fabrication processes and CMOS layout techniques.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Analyze MOSFET device behaviour and model its electrical characteristics.	An
CO 2	Analyze different CMOS logic styles to determine appropriate techniques for designing combinational and sequential logic circuits.	An
CO 3	Apply HDL modelling and circuit-level simulations to design arithmetic circuits and memory subsystems.	Ap
CO 4	Interpret FPGA and SoC architectural components and implement digital subsystems on FPGA platforms.	Ap
CO 5	Apply semiconductor fabrication steps and CMOS process flows to create layout designs for basic CMOS circuits.	Ap
CO 6	Apply EDA tools, simulation platforms, and FPGA development environments to design, analyze, and verify MOS devices, CMOS logic circuits, FPGA-based modules, and CMOS layouts.	C

Course Content	
MOS FUNDAMENTALS AND DEVICE MODELLING Review of MOSFET operations under enhancement and depletion modes – Threshold voltage derivation – I-V characteristics (Linear & Saturation region) – Small-signal models of MOSFET – Second-order effects: Body effect, Channel length modulation, Velocity saturation, Mobility degradation – CMOS inverter basics – DC characteristics of CMOS inverter.	9 Hours
PRACTICAL COMPONENT • DC analysis of NMOS/PMOS transistor • Simulation of CMOS inverter	6 Hours
COMBINATIONAL AND SEQUENTIAL CMOS LOGICS Static CMOS logic – Complex CMOS gates – Transmission gate and pass transistor logic – Ratioed logic: Pseudo NMOS, DCVSL – Dynamic logic: precharge/evaluate circuits, Domino logic – Clocking concepts – Sequential circuits at transistor level: latches, flip-flops, clock skew, clock distribution – Power dissipation in CMOS: static, dynamic, and short-circuit power.	9 Hours
PRACTICAL COMPONENT • Implementation of combinational circuits using Pseudo NMOS, DCVSL • Implementation of sequential circuits	6 Hours
SUBSYSTEM AND MEMORY DESIGN Arithmetic Circuits – Design of Adders: Carry Look ahead, Carry select and Carry save adders – Design of multipliers: Barun Array, Baugh Wooley and Wallace tree multipliers. Memory blocks – SRAM cell design (6T structure), Read and write operations, DRAM – DRAM cell and refresh concepts, ROM, Memory array organization, bitline/wordline operations.	9 Hours
PRACTICAL COMPONENT • Design of carry look ahead adder and carry save adder using Verilog HDL • Design of Braun array and Wallace tree multiplier using Verilog HDL	6 Hours
BASICS OF FPGA AND SoC ARCHITECTURE Introduction to PLAs and regular layout structures – Overview of FPGA architecture: configurable logic blocks, routing resources – FPGA Devices- Xilinx 7000 series. Basics of SoC design: components, interconnect, power management – Applications of SoC in embedded and consumer electronics.	9 Hours
PRACTICAL COMPONENT • Implementation of Multiplexer and encoder circuits in FPGA • Implementation of Counters and shift register circuits in FPGA	6 Hours
FABRICATION TECHNOLOGY Wafer preparation – Oxidation – Lithography – Etching – Ion implantation – Diffusion – Thin-film deposition – Metallization – CMOS process flow for n-well, p-well, and twin-tub technologies – Isolation techniques – Latch-up mechanisms and prevention – SOI technology.	9 Hours
CMOS DESIGN RULES, LAYOUT AND PARASITIC Lambda-based design rules – Stick diagrams: representation of logic circuits – Layout of CMOS inverter, NAND, NOR gates – Interconnect layers and contacts/vias.

		2	0	4	0	4
PC		SDG		9, 4, 12		

Pre-requisite courses	24EEI203 (Common to ECE/EEE/EIE)	Data Book / Code book (If any)	-
------------------------------	---	---------------------------------------	----------

Course Objectives

The purpose of taking this course is to:

1	equip students with a foundational understanding of microcontroller fundamentals and embedded system architectures.
2	develop embedded C programming skills and build real-time and event-driven embedded applications
3	provide hands-on experience with microcontroller boards and tools, prepare students for embedded product development

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	interpret the fundamentals of embedded systems, basic micro controller/processor architectures used in modern applications.	U
CO2	examine the fundamentals of Embedded C programming by describing bare-metal program basics.	Ap
CO3	illustrate the CPU architecture, programmer model, operating modes, memory interface, and AMBA bus system of ARM Cortex.	U
CO4	apply the concepts of memory mapping and interface the GPIO and serial communication peripherals (UART, USART, I2C, SPI) in embedded system	Ap
CO5	collaborate and solve real-world problems to develop embedded system project case studies and evaluate the performance and effectiveness of the implemented prototypes.	C
CO6	demonstrate embedded system applications by implementing bare-metal programming in Embedded C, and peripheral interfacing using ARM Cortex-M4 processor through lab experiments.	E

COURSE CONTENT	
EMBEDDED SYSTEMS – OVERVIEW Definition, characteristics, and classification - Embedded system vs general-purpose system - Building Blocks of Embedded System and Hardware Components - Embedded product development lifecycle - Hardware and software co-design - Overview of microcontrollers, microprocessors - Development toolchain: cross-compilers linkers. Practical Components • Datasheet reference-based activity – Feature Comparison (8051/PIC Controller) • Control word and Register Configuration (ADC, TIMER, CAPTURE INTERRUPT) • Configuration of port pins based on datasheet pin diagram-GPIO- LED Blinking. • Makefile for C, flashing tools, debugging basics • Application domains* *With respect to the concerned discipline	6 Hours 10 Hours
EMBEDDED C PROGRAMMING Difference between C and Embedded C - Structure of an embedded C program - Header files - Data Types, Configuration files, startup files - Bare-metal programming – Device drivers, Bitwise Operations - Code, Data, BSS, Stack, Heap - Static vs global variables - Pointers and Arrays for Buffer Operations - Introduction to IDE. Practical Components using IDE • Write a simple delay loop program. (Bare Metal Programming Exercise) • Set/reset/toggle LED through bitwise operations and observe through watch window • Demonstrate pointer accesses and variables • Array access using indexing and pointer arithmetic • Role of Break points and static/global variables	8 Hours 10 Hours
MICROPROCESSOR ARCHITECTURE CPU architectures: CISC vs RISC Overview - ARM Cortex Architecture: Components - Instruction level registers and Special Function Registers - General Purpose Registers-Programmer model-operating modes. ARM memory interface - Advanced Microcontroller Bus Architecture (AMBA), Advanced Peripheral Bus (APB), Advanced Serial Bus (ASB) Practical Components • Data sheet Comparison – ARM Versions • Common Microcontroller Software Interface Standard (CMSIS) • Configure GPIO pins using CMSIS • Use of Cortex-M system timer for accurate delays. • Low-Level Bit Manipulation Exercises	10 Hours 10 Hours

<u>Course Content</u>	
Career Awareness and Goal Setting - Exploring Varied Career Options Beyond Engineering - Industry Roles - Startups and Entrepreneurial Ventures - Research Opportunities and Higher Education - Public Sector and Non-Profit Careers - Self-Assessment and Personal Reflection - Identifying Strengths, Weaknesses, Skills, and Career Aspirations - Setting Short-Term and Long-Term Career Goals	6 Hours
Fundamentals of Interview Preparation - Analysing Company Background and Understanding Job Roles - Aligning Career Goals with Job Opportunities - Professional Etiquette and Appearance - Interview Dress Code, Grooming, and First Impression - Resume and Digital Profile Readiness - Types of interviews: personal, behavioural, stress, virtual, and panel	6 Hours
Behavioural Interviews – Responding with Purpose - Introduction to behavioural interviews: What and Why? - Common behavioural interview questions - The STAR technique (Situation – Task – Action – Result) - Identifying and reflecting on past experiences - Mapping soft skills to behavioural questions - Practicing concise storytelling - Active listening and adapting responses	6 Hours
Stress Interviews – Performing Under Challenging Situations - Understanding stress interviews: Purpose and setting - Types of stress tactics (rapid-fire questions, silence, disagreement, interruptions) - Strategies to stay composed and confident - Emotional regulation and response control - Maintaining clarity, tone, and respect under pressure - Practicing assertive and professional body language - Turning pressure moments into strengths	6 Hours
Panel Interviews - What is a panel interview? Structure and expectations - Understanding panel roles (HR, technical, managerial) - Techniques for engaging with a diverse panel - Managing eye contact, addressing questions, and body posture - Preparing multi-perspective answers - Handling follow-up or cross-questions - Strategies for closing the interview with impact	6 Hours

24EEI301	Control Systems		L	T	P	J	C
3			0	2	0	4	
PC			SDG		7, 9, 12		
Pre-requisite courses	24EEI101/24ECT101	Data Book / Code book (If any)			--		

Course Objectives:	
The purpose of taking this course is to:	
1	Equip the students with ability to model and analyze dynamic systems using mathematical techniques in both time and frequency domains.
2	Develop competence in stability analysis and controller design, including compensators and PID controllers, for achieving desired system performance.
3	Enable students to utilize MATLAB-based simulation tools and explore contemporary control system applications for solving real-world engineering problems.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Develop mathematical models and derive transfer functions for physical systems	Ap
CO 2	Analyze the time response of first and second order systems and design P, PI, and PID controllers.	Ap
CO 3	Analyze system stability in frequency domain and design appropriate compensators for performance improvement.	An
CO 4	Investigate the stability of linear time-invariant systems using Routh-Hurwitz criterion and root locus techniques.	An
CO 5	Develop state space models of dynamic systems and apply the concepts of controllability and observability.	Ap
CO 6	Simulate, implement, and validate control system concepts using MATLAB/Simulink to analyze the behaviour of real-world systems.	An

Course Content	
MATHEMATICAL MODELLING OF SYSTEMS Introduction to control systems – Open loop and closed loop systems - Components– Modelling of mechanical, electrical, electromechanical and thermal systems – Transfer function – Block diagram reduction techniques – Signal flow graph. Case Study: DC servo motor in solar/ antenna tracking systems.	9 Hours
Practical Component: - Simulation of transfer function for a spring-mass-damper system. - Transfer function of a DC servo motor. - Transfer function of a 2-phase AC servo motor.	9 Hours
TIME DOMAIN ANALYSIS Standard test signals – Time response of first and second order systems – Time domain specifications – Steady-state errors - Static error constants– P, PI and PID controllers. Case Study: PID controllers for motor drives	9 Hours
Practical Component: - Verification of time response analysis of Real time system. - Simulation/ Implementation of PI & PID controllers	6 Hours
FREQUENCY DOMAIN ANALYSIS Frequency response specifications - Bode plot – Polar plot – Gain margin and phase margin- Lead, lag, lead-lag compensator design. Case Study: Stability analysis of Electrical system in frequency domain.	9 Hours
Practical Component: - Magnitude/phase response, resonance and bandwidth of system. - Lag and lead Compensator	6 Hours
STABILITY ANALYSIS Definition of Stability - Location of roots of Characteristics equation in S plane for stability – Relative stability - Routh Hurwitz criterion – Root locus Techniques – Nyquist stability criterion. Case Study: Effect of Pole/Zero Addition on system stability	9 Hours
Practical Component: Stability analysis of linear systems	3 Hours
STATE VARIABLE ANALYSIS State space formulation-state model of linear system-state diagram-state space representation using physical variable- state space representation using phase variable - state space representation using canonical variable-Solution of state equations using Laplace Transform-Concepts of Controllability and Observability.	9 Hours
Case study: State space modelling of DC – DC converters - State space model for armature-controlled DC motor - Design Project using Microcontroller based system.	6 Hours

Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

PC		SDG		4,9,7,11		

Pre-requisite courses	24CSI101	Data Book / Codes / Standards (If any)	---
------------------------------	----------	---	-----

Course Objectives:		The purpose of taking this course is to:
1	Introduce the fundamentals of C data types, including structures, unions, enumerations, and enable them to write efficient recursive algorithms and use self-referential structures for solving dynamic data problems	
2	Develop an understanding of abstract data types (ADTs) and their application in implementing linear and non-linear data structures such as linked lists, stacks, queues, trees, and graphs	
3	Equip students with practical skills in data handling, through implementation of sorting, searching, and simulation-based applications in real-world domains such as IoT, embedded systems, and communication	
4	Enhance analytical and problem-solving skills by applying appropriate data structures and algorithms for solving computational problems with performance considerations	

Course Outcomes		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Implement and manipulate self-referential structures and recursive and greedy algorithms to solve structured data problems.		Ap
CO 2	Apply abstract data types to develop and implement linear data structures like singly, circular, and doubly linked lists with various operations		An
CO 3	Design and develop stack and queue ADTs using arrays and linked lists and demonstrate their applications in expression evaluation and memory management		An
CO 4	Analyze and apply different searching and sorting algorithms to process and organize data efficiently		An
CO 5	Demonstrate the use of non-linear data structures of trees and graphs to solve real-time computing problems using suitable algorithms.		An

<u>Course Content</u>	
DATA TYPES AND STRUCTURES Introduction to Data Types and Structures, Abstract Data Types (ADT) and Model – Algorithm Efficiency - Big-O Notation - Time Complexity - Space Complexity - Pseudocode Constructs – Pointers - Passing Structures through Pointers, Self-referential Structures – Recursive Algorithms. Simple Data Structures: List, Stack and Queue - Greedy Algorithms - Case Study: Travelling Salesman and Knapsack Problems - Dynamic Memory Allocation.	9 Hours
Practical Component 1. Implementation of simple C programs 2. Implementation of recursive algorithms 3. Dynamic Memory Allocation using malloc() and free()	6 Hours
LINKED LISTS AND THEIR APPLICATIONS Linear List Concepts – Linked List Data Structure – Algorithms: Insertion, Deletion, Retrieval, Traversal, Searching, Singly and Doubly Linked List Implementation, Circularly Linked Lists- Operations for Circularly linked lists, Polynomial Manipulation using Linked Lists - Applications of Linked Lists	9 Hours
Practical Component 1. Implementation of Linked List Algorithms 2. Application using linked list	4 Hours
STACK AND QUEUE ADTs Stack ADT- Definition, Operations, Array and Linked List Implementations – Applications: Prefix, Infix, Postfix Expressions and Evaluation - Infix to Postfix Conversion. Queue ADT- Definition, Operations, Array and Linked List Implementations, Circular Queues, - Priority Queue- Applications Case Study: Browser History Management using Stack - CPU Scheduling using Queue - Printer Spooling System	9 Hours
Practical Component 1. Stack Implementation Using Array and Linked List 2. Queue Implementation Using Array and Linked List 3. Applications of Stack and Queue ADTs 4. Infix to Postfix Conversion 5. Expression Evaluation	6 Hours
SEARCHING AND SORTING Searching - Sequential and Binary Search - Complexity Analysis of Search Algorithms, Sorting Concepts and Algorithms - Insertion Sort –Selection Sort - Heap Sort, Bubble Sort, Merge Sort - Quick Sort	9 Hours
Practical Component 1. Implementation of Search Algorithms 2. Sorting Student Grades 3. Sorting Orders in a Delivery System 4. Performance comparison of sorting algorithms	6 Hours

24ECI302	Communication Engineering	L	T	P	J	C
		3	0	2	0	4
PC		SDG		3, 9		
Pre-requisite courses	24ECT202	Data Book / Code book (If any)			-	

Course Objectives:	
The purpose of taking this course is to:	
1	Understand communication-system fundamentals, analog modulation techniques, and Software-Defined Radio (SDR) concepts.
2	Analyse noise sources and wireless channel models (large-scale path loss, small-scale fading, Doppler effects) and assess their impact on communication-system performance.
3	Compare analog pulse modulation and waveform coding (PCM, DPCM, ADPCM, DM) for efficient communication-system design.
4	Learn baseband signalling, line coding, pulse shaping, equalization, and information-theoretic limits including source coding.
5	Implement and validate communication modules using MATLAB / Python / GNU Radio and SDR hardware (RTL-SDR / ADALM-PLUTO / USRP) and analyse experimental results.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Describe the fundamentals of communication systems, signal representation, frequency translation and noise representations.	Ap
CO 2	Analyze amplitude modulation and demodulation techniques, transmitter and receiver architectures, and their performance.	An
CO 3	Analyze angle modulation and demodulation techniques, transmitter and receiver architectures, and their performance.	An
CO 4	Analyze analog and digital pulse modulation techniques and line coding techniques.	An
CO 5	Apply information theory and source coding principles to analyze information content and channel capacity.	An
CO 6	Implement communication system elements using MATLAB, Python, GNU Radio, SDR, and hardware to analyze signal and system performance.	E, C

Course Content													
INTRODUCTION TO COMMUNICATION SYSTEMS Basic elements of a communication system: Medium and spectrum; Signal sources and its spectrum-Need for modulation-Frequency translation: Multipliers and mixers-Hilbert transform- I-Q representation of pass-band signals- SDR fundamentals. Noise sources - Classification of noise-mathematical representation of noise: AWGN-Narrow band noise representations (IQ and envelope / phase forms)- Rayleigh and Rician -Signal-to-noise ratio, Free space model and link budget. Self-study: Evolution of communication systems from telegraphy to 6G.												9 Hours	
PRACTICAL COMPONENT • Capturing real time signals and spectral analysis. • AWGN generation and statistical verification. • Frequency translation using mixers and multipliers. • Tools: MATLAB/Python/GNU Radio.												6 Hours	
AMPLITUDE MODULATION Amplitude modulation — DSB-FC, DSB-SC, SSB-SC and VSB; modulators and demodulators (square-law, switching, ring, envelope, coherent)-Noise performance of AM - Transmitter and receiver architectures — superheterodyne receiver, image rejection, sensitivity and selectivity.												9 Hours	
PRACTICAL COMPONENT • AM signal generation and detection using MATLAB / Hardware. • Spectrum analysis of broadcast signals using SDR and GNU Radio Companion. • AM transmitter and receiver implementation using SDR.												6 Hours	
ANGLE MODULATION Angle Modulation -Mathematical representation- Modulation index, Power and Bandwidth- Narrow band and wideband FM – Direct and Indirect FM generation-FM demodulation (slope detector, PLL) - Noise performance of FM receiver-Preemphasis and Deemphasis- FM receiver architecture-Stereo FM.												9 Hours	
PRACTICAL COMPONENT • FM and PM signal generation and detection using MATLAB / hardware. • Spectrum analysis of broadcast signals using SDR and GNU Radio Companion. • FM transmitter and receiver implementation using SDR.												6 Hours	
PULSE MODULATION Analog pulse modulation: Pulse Amplitude Modulation (PAM), Pulse Position Modulation (PPM), Pulse Width Modulation (PWM). Digital Pulse Modulation: Pulse Code Modulation (PCM) - Linear prediction and Differential PCM (DPCM); Adaptive DPCM (ADPCM)-Delta Modulation (DM) - Adaptive Delta Modulation (ADM). Case study: Speech coding techniques used in wireless standards overview.												9 Hours	

M. Bhurathi
BoS Chairperson

Line coding techniques — NRZ, RZ, unipolar, polar, bipolar (AMI), biphase (Manchester).							6 Hours		
Case study: Run-length-limited codes (preview — used in storage and Ethernet).									
PRACTICAL COMPONENT • PAM, PPM and PWM signal generation and detection (MATLAB / hardware). • PCM, DPCM and ADPCM speech coder — quality comparison. • DM and ADM simulation.									
INFORMATION THEORY AND SOURCE CODING Uncertainty, information, entropy and joint/conditional entropy-source coding theorem. Shannon-Fano coding and Huffman coding- Discrete Memoryless Channel (DMC)-mutual information-channel capacity-Channel coding theorem-Differential entropy and mutual information for continuous ensembles-Information capacity theorem (Shannon-Hartley)- implications and trade-offs (power vs bandwidth, Shannon limit). PRACTICAL COMPONENT • Shannon-Fano and Huffman coding for English text and image data — measure compression ratio.							9 Hours		
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

24ECI303	Communication Networks	L	T	P	J	C
		3	0	2	0	4
PC		SDG		9, 11, 16		
Pre-requisite courses	24ECI302	Data Book / Code book (If any)		-		

Course Objectives:	
The purpose of taking this course is to:	
1	Understand advanced networking concepts, protocol design, and modern communication architectures including 5G and IoT systems.
2	Apply routing, wireless, and IoT protocols for designing scalable and efficient network solutions.
3	Analyze real-time networking challenges in mobile, industrial, and automotive systems.
4	Design secure, automated, and programmable networks using modern tools and frameworks.
5	Develop practical skills in simulation, implementation, and performance evaluation of next-generation networks.

Course Outcomes:		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain networking fundamentals, layered protocol architectures (OSI, TCP/IP) and emerging communication-system features such as SDN, NFV and 6G vision.	U
CO 2	Apply routing protocols (RIP, OSPF, BGP), wireless/mobile protocols (Wi-Fi, 5G NR) and IoT protocols (LoRaWAN, MQTT, CoAP) in design and simulation environments.	Ap
CO 3	Analyze the performance and behaviour of advanced networks (5G NR, LoRaWAN, CAN, TSN) using packet capture, simulation and analytical models for throughput, delay, jitter and packet loss.	An
CO 4	Analyze security mechanisms (IPsec, TLS, Zero-Trust) and real-time networking requirements (QoS, TSN, RT-Ethernet) in modern communication networks to identify suitable protection and performance measures.	An
CO 5	Analyze network architectures for industrial automation, automotive, smart-grid and IoT applications with respect to scalability, reliability and security requirements.	An
CO 6	Apply Python, REST APIs, Ansible and SDN controllers to automate network configuration, deployment and monitoring tasks.	Ap

Course Content													
NETWORKING FUNDAMENTALS AND PROTOCOL DESIGN												9 Hours	
Introduction to data communication; network types (LAN, MAN, WAN, PAN); topologies. Layered Network architectures — OSI Reference Model vs TCP/IP Suite. Network Devices. Physical Layer – Transmission Media, Multiplexing Techniques, Switching Techniques. Data link layer essentials — framing, error correction and detection (Parity, CRC, Hamming Codes), media access (CSMA/CD, CSMA/CA), Ethernet evolution (1 GbE → 400 GbE), VLANs.													
Real-time problem: designing a collision-resilient, VLAN-segmented campus network with a high-throughput Ethernet backbone and reliable error-detection/correction for a multi-department enterprise.													
PRACTICAL COMPONENT												8 Hours	
- Design and simulate basic LAN / WAN topologies using Cisco Packet Tracer or GNS3. - Performance analysis of CSMA/CD and CSMA/CA protocols. - Simulation of Error Detection techniques.													
PROTOCOL LAYERS AND 6G VISION												9 Hours	
Network layer — IPv4 and IPv6 addressing, subnetting, Variable Length Subnet Masking (VLSM), NAT, ICMP. Routing algorithms and protocols — Distance Vector (RIP), Link-State (OSPF), Path Vector (BGP); intra- vs inter-domain routing. Transport layer — UDP, TCP (connection setup, flow and congestion control — Tahoe / Reno / CUBIC / BBR). Application Layer Protocols (DNS, Email, FTP, CDN Architecture)													
Evolution of mobile networks — 1G to 4G LTE, 5G NR, 6G vision and ITU IMT-2030 targets. Network slicing.													
Real-time problem: A passenger's phone stays connected to 5G with minimal call/data drop while travelling on a fast-moving train, by smoothly handing over between cell towers.													
PRACTICAL COMPONENT												6 Hours	
- Implement VLSM and configure various routing protocols. - TCP flow / congestion control visualisation using Wireshark on a real link. - Simulate a phone handing over between 5G NR cell towers while the user travels on a fast-moving train, and measure handover delay and packet loss. - Analyse 5G NR Throughput and Latency under varying Signal-to-Interference plus-Noise Ratio (SINR) conditions.													
LoRaWAN AND IoT NETWORKS												9 Hours	
Introduction to Low Power Wide Area Networks (LPWAN). LoRaWAN architecture — end devices, gateways, network server and application server. Protocol stack — LoRa physical layer (Chirp Spread Spectrum, spreading factors) and LoRaWAN MAC layer (Class A / B / C). Adaptive Data Rate (ADR) and duty-cycle regulations. Comparison with NB-IoT and LTE-M (3GPP LPWAN). IoT application protocols — MQTT, CoAP.													
Real-time problem — designing a resilient LoRaWAN network for large-scale agricultural / smart-city monitoring with thousands of sensors.													
PRACTICAL COMPONENT												4 Hours	
- Establish a secure Communication for transmit of sensor data to a cloud platform. - Simulate multiple sensor nodes and analyze network coverage and packet collisions using LoRaWAN Technology.													

M. Bhurathi
BoS Chairperson

AUTOMOTIVE AND INDUSTRIAL NETWORKS (CAN, TSN, Industrial IoT) Controller Area Network (CAN) — bus topology, arbitration (CSMA/CR), bit timing, error handling. CAN Frame Structure — standard (11-bit) vs extended (29-bit) frames. CAN FD (flexible data-rate) — enhancements and use in modern ECUs. Higher-layer protocols — CANopen, J1939 (heavy-vehicle telematics), UDS (diagnostics). Automotive Ethernet — 100BASE-T1, 1000BASE-T1 (used for Zonal Architectures). use cases in industrial automation and avionics. Industrial Ethernet protocols — PROFINET, EtherCAT, OPC-UA (overview). Real-time problem — implementing priority-based message scheduling for critical ECUs in an electric vehicle. PRACTICAL COMPONENT - Interface multiple microcontrollers using CAN protocol; analyze bus traffic with a logic analyzer / Saleae. - Implementation of an interior lightning control subsystem communicating over the CAN Network using DBC based messaging. - Wireshark / CANlogger-based UDS diagnostic session on a simulated ECU.	9 Hours 6 Hours
NETWORK SECURITY, PROGRAMMABILITY AND AI FOR NETWORKS Fundamentals of network security — symmetric (AES) and asymmetric (RSA, ECC) cryptography; digital signatures; PKI; firewalls (packet-filter, stateful, NGFW). Secure protocols — IPsec (AH, ESP, IKEv2), SSL/TLS 1.3. Wireless / 5G security. Network automation and programmability — Python for networking (Netmiko, NAPALM, Nornir), REST APIs, YAML / JSON. AI / ML for networks — AIOps, anomaly detection, traffic classification, self-organizing networks. Capstone-style real-time problem — implementing automated security compliance checks and AI-based anomaly detection in a multi-cloud enterprise. PRACTICAL COMPONENT - Automate network configuration and security checks using Python (Netmiko / Nornir). - Anomaly detection on a labelled NetFlow / CIC-IDS dataset using a simple ML classifier. - Capstone Mini-Project — design and deploy a secure, automated network for a real-time IoT application.	9 Hours 6 Hours

PRJ		SDG		4, 8, 9, 16, 17		

Pre-requisite courses	-	Data Book / Code book (If any)	-
------------------------------	----------	---------------------------------------	----------

Course Objectives:

The purpose of taking this course is to:

1	Provide students with exposure to real-world industrial and professional practices.
2	Enhance communication, interpersonal, and teamwork skills.
3	Foster ethical responsibility and a professional attitude in engineering work environment.
4	Enable students to apply engineering knowledge and acquired skills in solving workplace challenges.
5	Create pathways for employment through professional experience.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Develop communication, interpersonal, and critical skills essential for succeeding in interviews.	Ap
CO2	Demonstrate ethical behavior and adhere to professional standards in an industrial setting.	Ap
CO3	Communicate and collaborate effectively both within and beyond the team environment.	Ap
CO4	Address real-world workplace challenges by analyzing situations and applying relevant skills gained during the course.	An
CO5	Build professional networks that may lead to full-time employment after graduation.	E
CO6	Cultivate the work ethic and professional attitude required for a successful career.	Ap

4ECI305	Machine Learning	L	T	P	J	C
		2	0	2	0	3
PC		SDG		3, 9		
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:	
The purpose of taking this course is to:	
1	Understand fundamental concepts of machine learning, including learning paradigms and metrics.
2	Gain knowledge of neural network models for solving classification problems.
3	Understand linear models for regression and classification tasks.
4	Study clustering and dimensionality reduction techniques for data analysis.
5	Familiarize with graphical and probabilistic models and develop skills in implementing machine learning solutions.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Analyze fundamental machine learning concepts including learning paradigms, model evaluation, and performance measures.	An
CO 2	Apply neural network models for solving classification problems.	Ap
CO 3	Evaluate linear models for regression and classification tasks.	E
CO 4	Analyze clustering and dimensionality reduction techniques for data analysis.	An
CO 5	Apply graphical and probabilistic models for decision-making and prediction tasks.	Ap
CO 6	Develop and implement machine learning models using appropriate tools for real-world datasets.	C

Course Content	
FUNDAMENTALS OF MACHINE LEARNING Introduction to ML pipeline-Learning - types of learning: supervised, unsupervised and reinforcement learning-Basic Data Preprocessing- Feature Engineering- Training versus Testing – Bias and Variance decomposition – Evaluation Metrics in ML	6 Hours
PRACTICAL COMPONENT • Perform data preprocessing: handling missing values, normalization, and encoding. • Implement Rule based classifier with train-test split and evaluate model performance using metrics.	4 Hours
NEURAL NETWORKS Brain and neuron -Models of a neuron – Perceptron (Single layer and Multi-layer) – Feed forward neural networks, Back propagation Neural Network- Generalized Radial-basis function networks	6 Hours
PRACTICAL COMPONENT • Implement a single-layer perceptron for binary classification. • Develop a multi-layer neural network model for classification using backpropagation. • Implement Radial Basis Function (RBF) network for pattern classification.	6 Hours
LINEAR MODEL Linear models, Linear models for regression: linear basis function models -Linear models for classification – Least squares for classification- Two classes and multiple classes (One vs One and One vs all) - Discriminative and Generative Models – Naïve Bayes - Support vector machine.	6 Hours
PRACTICAL COMPONENT • Implement linear regression and evaluate model performance. • Implement classification models (logistic regression / SVM / Naïve Bayes) and compare their performance.	6 Hours
CLUSTERING AND DIMENSIONALITY REDUCTION Clustering: Gaussian Mixture model, K-means clustering, Self Organized feature map Dimensionality reduction: Linear Discriminant analysis, Principal Component Analysis, Independent Component Analysis.	6 Hours
PRACTICAL COMPONENT • Perform clustering using K-means and visualize the results. • Apply dimensionality reduction techniques (PCA/LDA) for feature extraction and visualization.	6 Hours
GRAPHICAL MODEL Directed graphical models - Undirected graphical models - Markov model - Hidden Markov Models (HMMs). Decision trees – Classification and regression tree.	6 Hours
PRACTICAL COMPONENT • Implement decision tree for classification and regression tasks. • Develop a simple probabilistic model (e.g., Naïve Bayes / basic graphical model) and evaluate its performance. • Mini Project: Build an end-to-end ML pipeline with comparative analysis of ML models for any publicly available dataset /created custom dataset	8 Hours

24ECI306	Digital Communication	L	T	P	J	C
		3	0	0	2	4
PC		SDG	3, 9			
Pre-requisite courses	24ECI302	Data Book / Code book (If any)			-	

Course Objectives:	
The purpose of taking this course is to:	
1	To provide knowledge of digital communication fundamentals and synchronization techniques.
2	To develop the ability to apply error control coding techniques for reliable data transmission.
3	To enable analysis and comparison of digital modulation techniques for efficient communication system design.
4	To impart understanding of wireless communication techniques for improving reliability and system capacity.
5	To provide practical exposure to cellular communication concepts and implementation of digital communication modules using modern tools.

Course Outcomes:		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Analyze digital communication fundamentals and synchronization techniques	An
CO 2	Apply error control coding techniques for reliable data transmission.	Ap
CO 3	Analyze digital modulation techniques to compare their suitability for efficient communication system design.	An
CO 4	Evaluate wireless communication techniques to improve signal reliability and system capacity.	E
CO 5	Analyze cellular communication and multiple access techniques to assess coverage, capacity, and interference.	An
CO 6	Develop digital communication modules using modern tools to validate theoretical concepts.	E, C

Course Content	
DIGITAL COMMUNICATION FUNDAMENTALS Block diagram of Digital Communication System –Need for synchronization- Carrier synchronization- Mth Powerloop – Costas loop-Symbol Synchronization- Early Late gate type. Gram-Schmidt Orthogonalization Procedure- Geometric interpretation of signals- Maximum Likelihood detector - Correlation receiver, Matched Filter Receiver. AWGN channel models: Wave form and vector channel models- Probability of Error.	9 Hours
ERROR CONTROL CODING Linear block codes –Cyclic codes– Convolutional codes –Viter bi Algorithm.	9 Hours
DIGITAL MODULATION TECHNIQUES Signaling scheme, Generation, Detection, Probability of error and Power Spectral Density of Coherent Modulation Techniques: BPSK-BFSK-QPSK- MSK, GMSK - Non Coherent Binary Modulation Techniques: FSK– Differential phase shift keying - Introduction to M-ary signaling. M-PSK, M-QAM	9 Hours
WIRELESS COMMUNICATION FUNDAMENTALS Diversity and Combining Techniques: Time Diversity, Frequency diversity, Space Diversity- combining techniques-Selection combining, Equal gain combining, Maximum ratio Combining. Spread Spectrum Systems: PN sequence- m-sequence- Direct Sequence Spread Spectrum-Frequency Hopping Spread Spectrum - RAKE receiver- multi-carrier system-OFDM. MIMO systems: Narrowband channel model- Beamforming.	9 Hours
CELLULAR COMMUNICATION Introduction, System Architecture-Frequency reuse, Cell Assignment techniques, Cochannel and adjacent channel interference-Hand off Strategies, Improving Coverage and capacity in cellular systems. Multiple Access techniques: FDMA, TDMA, CDMA, SDMA, OFDMA, Duplexing Techniques: TDD, FDD. Case Study: 1. Evolution of cellular technologies.	9 Hours

Course Content	
ANTENNA FUNDAMENTALS Radiation mechanism, Radiation Pattern, Radiation intensity, Beam solid angle, Gain, Directive gain, Power gain, Directivity, Beamwidth. Bandwidth, Reciprocity principle, Effective length, Effective area, Radiation Resistance, Friis Transmission formula, Antenna Field Zones, Polarization, Antenna noise temperature, Self and mutual impedances of antennas.	9 Hours
PRACTICAL COMPONENT Radiation pattern of dipole antenna Gain and beamwidth measurement	3 Hours
ANTENNA ARRAYS & SPECIAL ANTENNAS Broadside and End fire array - Two and four element arrays - N element linear array SPECIAL ANTENNAS - Helical antenna, V-antenna, Rhombic antenna, Yagi-uda antenna, Log periodic antenna. Slot antenna, Horn antenna, Parabolic reflector antennas, Microstrip antenna, Introduction to smart antennas and MIMO systems.	9 Hours
PRACTICAL COMPONENT - Yagi-Uda antenna simulation - Array beamforming using simulation tools	3 Hours
MICROWAVE PASSIVE & ACTIVE DEVICES Terminations, Attenuators, Phase Shifters, Directional Couplers, Microwave Hybrid Circuits, Power Dividers, Circulator, Isolator, PIN Diode Switch, Gunn Diode Oscillator, IMPATT-TRAPATT-BARITT Diodes, Varactor Diode-Introduction to Microwave Integrated Circuits.	9 Hours
PRACTICAL COMPONENT - VSWR measurement using slotted line - Attenuator and coupler characteristics	9 Hours
MICROWAVE TUBES Klystrons- Re-entrant Cavities-Velocity Modulation Process– Bunching Process– Output Power and Beam Loading- Reflex Klystrons– Velocity Modulation– Power Output and Efficiency– Electronic Admittance, Helix Travelling–Wave Tubes (TWTs) –Microwave Crossed–Field Tubes – Cylindrical Magnetron.	9 Hours
PRACTICAL COMPONENT - Klystron characteristics - Gunn diode characteristics	6 Hours
MICROWAVE MEASUREMENTS Measuring Instruments: VSWR Meter, Power Meter, Spectrum Analyzer, Network Analyzer - Measurement of Impedance, Frequency, Power, VSWR. Radiation pattern measurement of microwave horn antenna.	9 Hours
PRACTICAL COMPONENT - Power measurement using microwave bench - Horn antenna radiation measurement	3 Hours

24ECP401	Project Phase - I	L	T	P	J	C
		0	0	0	6	3
PRJ		SDG		4, 8, 9, 16, 17		

Pre-requisite courses	-	Data Book / Code book (If any)	-
------------------------------	----------	---------------------------------------	----------

Course Objectives:	
The purpose of taking this course is to:	
1	To introduce students to fundamental design principles and methodologies required to develop software-oriented solutions for complex problems.
2	To provide knowledge of various hardware and software tools and enable students to analyze and select appropriate technologies for project implementation.
3	To develop the ability to evaluate system performance using appropriate metrics and testing techniques.
4	To foster teamwork, collaboration, and project management skills for effective group-based solution development.
5	To encourage critical thinking and decision-making skills in justifying design choices based on experimental results and performance analysis.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply design principles to develop a working prototype or software-oriented implementation to address a complex problem	Ap
CO2	Analyze different hardware and software tools to choose the most suitable ones for project implementation.	An
CO3	Evaluate the performance of the prototype or software implementation based on the project requirements.	E
CO4	Create an organized team-based strategy to collaboratively design and implement the solution for the project.	C
CO5	Justify the decisions made during the design and development process, based on testing and performance analysis.	E
