

KUMARAGURU COLLEGE OF TECHNOLOGY

An autonomous Institution affiliated to Anna University, Chennai

COIMBATORE – 641 049.

B.TECH. INFORMATION TECHNOLOGY

REGULATION 2024

I to VIII Semesters

Department of Information Technology

Signature of BOS Chairman, IT

VISION

The department of Information Technology aspires to become a school of excellence in providing quality education, constructive research and professional opportunities in Information Technology.

MISSION

- To provide academic programs that engage, enlighten and empower the students to learn technology through practice, service and outreach
- To educate the students about social responsibilities and entrepreneurship
- To encourage research through continuous improvement in infrastructure, curriculum and faculty development in collaboration with industry and institutions.

PROGRAM SPECIFIC OUTCOMES (PSOs)

The Program Specific Outcomes of Information Technology Undergraduate Program are:

PSO1: IT Systems Innovation and Management

Graduates will design and manage secure, scalable IT systems that address real-world challenges with technological and social relevance.

PSO2: Emerging Tech for Business Impact

Graduates will apply cutting-edge technologies to create innovative, ethical solutions that drive business transformation and community advancement.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Graduates will have progressive learning and successful career in Information, Communication Technologies and their applications

PEO2: Graduates will be leaders in their chosen field

PEO3: Graduates will utilize the acquired technical skills and knowledge for the benefit of society

PROGRAM OUTCOMES (POs)

Graduates of the Information Technology Undergraduate Program should have the ability to:

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization to develop to the solution of complex engineering problems.

Signature of BOS Chairman, IT

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development.

PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required.

PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions.

PO5: Engineering Tool Usage: Create, select, and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems.

PO6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture, and environment.

PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws.

PO8: Individual and Collaborative Teamwork: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

PO10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

PO11: Life-Long Learning: Recognize the need for and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

24HST103	EFFECTIVE COMMUNICATION		L	T	P	J	C
2			0	0	0	2	
HS			SDG		4, 8		
Pre-requisite courses		-	Data Book / Code book (If any)		-		

Course Objectives:	
The purpose of taking this course is to	
1	enhance students' abilities to communicate ideas effectively, both orally and in writing, by developing skills in organizing thoughts clearly and logically and expressing them through well-structured paragraphs and concise summaries.
2	enable students to critically evaluate and synthesize information from multiple sources and utilize suitable writing techniques and formats to produce professional-quality content tailored to various contexts.
3	foster active listening, critical reading, and reflective thinking, empowering students to create engaging, relevant, and informative content by applying effective communication strategies across diverse platforms.

Course Outcomes	
After successful completion of this course, the students shall be able to	
	Revised Bloom's Taxonomy Levels (RBT)
CO1	demonstrate proficiency in delivering ideas effectively, both in speaking and writing, with a deeper understanding of the content and the ability to convey complex ideas through well-structured paragraphs and summaries.
CO2	create and present original content by evaluating information from multiple sources and employing appropriate formats and writing strategies across various professional contexts.
CO3	produce engaging and informative content through active listening, reading, reflection, and effective communication skills.

Course Outcomes (CO)	Program Outcomes (PO) (Strong-3, Medium – 2, Weak-1)											Program Specific Outcomes (PSO)
	1	2	3	4	5	6	7	8	9	10	11	
	Engineering Knowledge	Problem Analysis	Design/Development of Solutions	Conduct Investigations of Complex Problems	Engineering Tool Usage	The Engineer and The World	Ethics	Individual and Collaborative Team work	Communication	Project Management and Finance	Life-Long Learning

Course Content				
Text Analysis Composition of Coherent Paragraphs (Expository, Descriptive, Narrative, Evaluative) - Loud Reading (Reading Extracts will be given where students identify the main idea of paragraphs or sections and debrief)				6 Hours
Visual & Written Analysis Process writing (Drafting effective introduction, process and conclusion using appropriate transition words and phrases) - Describing Visuals (Line graph, Bar Chart, Flow Chart, Pie Chart, Table, Tree diagram) - Note Making & Summarizing				6 Hours
Professional Correspondence Crafting Professional Emails - Writing Instruction for Manuals – Reading technical documents (Reading extracts will be given to construct sentences from the new words found in the document)				6 Hours
Research and Documentation Library Reading (Identify at least three sources and extract information, Summarize the main ideas and key findings from each source, compile them findings into a brief report that includes the main points, sources, and relevance to the topic)- Report Writing (Title Page, Abstract, Introduction, Methodology, Results, Discussion, Conclusion and recommendation)				6 Hours
Talk Analysis and Podcast Skills Listening to and analyzing TED talks – Preparing Podcast-PRISM (Professional Rhetoric Improvement and Speech Mastery) to share facts, opinions and experiences - Writing Reviews on products.				6 Hours
Theory Hours:	30	Tutorial Hours:	0	Practical Hours: 0
				Project Hours: 0
				Total Hours: 30

24MAI114	APPLIED LINEAR ALGEBRA AND CALCULUS (Common to CS, IT, AD)	L	T	P	J	C
		3	0	2	0	4
BS		SDG		4, 9		
Pre-requisite courses		-		Data Book / Code book (If any)		

Course Objectives:	
The purpose of taking this course is to:	
1	understand and apply the concepts of eigenvalues, eigenvectors, and matrix transformations to solve real-world linear algebra problems relevant to computing and data sciences.
2	develop proficiency in vector spaces, subspaces, and matrix decomposition techniques (LU and SVD) for effective analysis and solution of linear systems in engineering and data analytics.
3	apply differentiation and integration techniques, including optimization and calculation of areas and volumes, to solve practical problems in engineering and computational contexts.
4	master multivariate calculus concepts such as partial derivatives, Taylor series, and constrained optimization methods for applications in machine learning and data science algorithms.
5	provide MATLAB techniques for solving first-order and higher-order ordinary differential equations to model and analyse dynamic systems in computing and engineering.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	apply the concepts of eigenvalues and eigenvectors to diagonalize matrices and solve systems of linear equations in real-world applications.	Ap
CO2	apply the concepts of vector spaces, subspaces and matrix decomposition techniques such as LU decomposition and Singular Value Decomposition to solve linear systems and reduce matrix complexity in data science and engineering problems.	Ap
CO3	apply differentiation techniques to solve optimization problems including finding maxima and minima and use integration methods to compute arc lengths, areas between curves and volumes of solids for practical engineering and computational applications.	Ap
CO4	apply multivariate calculus concepts such as partial derivatives and Taylor's series expansion to analyse and approximate multivariable functions for solving engineering and computational problems.	Ap
CO5	analyse and solve constrained and unconstrained optimization problems using the Lagrange multiplier method and determine the maxima and minima of functions with two or more variables relevant to machine learning and data science applications.	An
CO6	analyse methods for solving first-order and higher-order ordinary differential equations to model and analyse dynamic systems in engineering and computing, using appropriate solution techniques to address real-world problems.	An

Course Content	
MATRICES Eigenvalues and eigenvectors of a real matrix – Properties of eigenvalues and eigenvectors (Statement only) – Cayley Hamilton theorem (excluding proof) - Orthogonal matrices – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation. Practical Component Matrix operations like addition, subtraction, multiplication, inverse, rank and transpose, eigenvalues and eigenvectors of a given matrix and verify the diagonalization of the matrix. Cayley-Hamilton theorem to find the characteristic equation of a matrix and verify that the matrix satisfies its own characteristic equation.	9 Hours 6 Hours
VECTOR SPACES Vector spaces and subspaces over real space – Euclidean spaces - Linear independence and dependence - Basis and Dimension - Null spaces, column spaces and Linear transformations - LU decomposition method - Singular Value Decomposition method. (No proofs of any theorems, only problems based on these topics) Practical Component Linearly independent and dependent vectors and Singular Value Decomposition. Curve Tracing, 3D and Surface plotting.	9 Hours 6 Hours
APPLICATIONS OF CALCULUS Differentiation: Mean Value Theorem-Maxima and Minima – Integration: Arc Length, Area between two curves, Area of a Surface of Revolution, Volume of solids Practical Component First and second derivatives of a given function, area between two curves and the volume of a solid of revolution Optimization problems in single variables.	9 Hours 6 Hours

Signature of BOS Chairman, IT

FUNCTIONS OF SEVERAL VARIABLES Partial derivatives – Homogeneous functions and Euler’s theorem –Total derivative – Taylor’s series expansion - Maxima and minima of functions of two variables – Constrained maxima and minima: Lagrange’s multiplier method with single constraints – Jacobians				9 Hours					
Practical Component Computing partial derivatives of multivariable functions Optimization problems in multiple variables				6 Hours					
ORDINARY DIFFERENTIAL EQUATIONS Solutions of first order linear ODE: Leibnitz equation and Bernoulli’s equation – Linear, homogeneous differential equations of second and higher order with constant coefficients.				9 Hours					
Practical Component Solution of first order ordinary differential equations. Solution of second and higher order ordinary differential equations				6 Hours					
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

24PHI101	APPLIED PHYSICS FOR COMPUTING (Common to AD, CS, IT)	L	T	P	J	C
		3	0	2	0	4
BS		SDG		7, 9, 12		

Pre-requisite courses	High School Education	Data Book / Code book (If any)	-
-----------------------	-----------------------	--------------------------------	---

Course Objectives:	
The purpose of taking this course is to:	
1	understand and apply fundamental principles of wave behaviour, optics, and acoustics, and their practical applications in engineering.
2	develop a solid understanding of quantum mechanics and quantum computing, and their relevance to modern technology.
3	integrate physics principles across mechanics, and thermal physics to solve real-world problems.
4	foster analytical and problem-solving skills by applying key concepts to real-world engineering and technological challenges.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply wave behaviour in optics and demonstrate its applications in real-world technologies.	Ap
CO 2	understand quantum mechanics principles and state their application in quantum information systems.	Ap
CO 3	implement qubits and quantum gates to demonstrate the advantages of quantum computing.	Ap
CO 4	examine the principles of heat transfer mechanisms for effective thermal management in engineering applications.	Ap
CO 5	apply vectors and moments to equilibrium problems in distributed-force systems with free body diagrams	Ap
CO 6	analyse and interpret acoustic principles to assess sound quality and design strategies for effective noise control in real-time applications.	An

Course Content													
Applied optics Wave Behaviour in Optics: Reflection, Refraction, Interference, Diffraction and Polarization (qualitative) - Interaction of light and matter - Absorption - Spontaneous emission - Stimulated emission - Population inversion - CO ₂ laser - Semiconductor lasers - Applications –Laser Imaging and Holography- Laser gyroscopes- LiDAR- Introduction and importance of Fiber Optics Technology- Propagation mechanism of rays in an optical fibre, Meridional rays, Skew rays- Types of optical fibres -Application of Optical Fibers, Optical fibre Communication system with block diagram.												9 Hours	
Practical Component - Semiconductor laser: a) Determination of wavelength of laser b) Determination acceptance angle and numerical aperture of an optical fibre. c) Determination of particle size - Spectrometer – Determination of wavelength of mercury source using grating												6 Hours	
Quantum physics Introduction to Quantum Mechanics- Wave Particle duality- Heisenberg uncertainty principle- Wave function- Postulates of Quantum Mechanics- Schrodinger's Equations - Particle in a box- Eigen values and Eigen function- Quantum confinement – quantum wells, wires and dots – Quantum system for information processing - quantum states – classical bits – quantum bits or qubits –CNOT gate - multiple qubits – quantum gates – advantage of quantum computing over classical computing.												9 Hours	
Practical Component - Determination of band gap of a semiconductor - Determination of efficiency of solar cell - Determination of Planck's constant – Electroluminescence method												6 Hours	
Thermal Physics Transfer of heat energy – conduction, convection, and radiation – thermal expansion of solids and liquids – expansion joints – bimetallic strips – theory of heat conduction in solids – rectilinear flow of heat – determination of thermal conductivity of a bad conductor - Lee's & Charlton's disc method - Thermal Insulation – classification and properties – heat exchangers - applications – Thermal Physics in Virtual Reality and Haptics.												9 Hours	
Practical Component Lee's Disc method: Determination of thermal conductivity of a bad conductor												6 Hours	
Mechanics Introduction to position vector, force vector and moment vector- 3-D representation of force and couple- their moments about a point or line- Distributed-force systems- Free Body diagram- Equilibrium of a body under 2D/3D force systems- Moment of inertia of plane areas; Perpendicular-axis and parallel axis theorems- Rectilinear and curvilinear motion of a particles- Work and energy- Impulse and momentum.												9 Hours	

Signature of BOS Chairman, IT

Practical Component - Compound pendulum – Determination of acceleration due to gravity - Non-uniform bending – Determination of Young's modulus	6 Hours
Acoustics Sound basic definitions - Human response to sound and vibration- Range of audible sound pressure levels and frequencies, infra sound, ultrasound-Pitch-Loudness: equal loudness contours and loudness level. Loudness calculations. Principle of superposition of waves, interference, beats, standing waves- Principle of active noise control- Doppler effect. Reverberation - Reverberation time - Absorption coefficient and its determination - Factors affecting the acoustics of the buildings and their remedies.	9 Hours
Practical Component Melde's string – Determination of frequency of a tuning fork	6 Hours

Theory	Tutorial	Practical	Project	Total

24CSI101	LOGICAL THINKING AND PROBLEM SOLVING (Common to all Programmes)		L	T	P	J	C
			3	0	2	0	4
ES			SDG	8, 9			
Pre-requisite courses	-	Data Book / Code book (If any)	-				

Course Objectives:	
The purpose of taking this course is to:	
1	Gain a comprehensive understanding of computing systems, including their classification, processing units, memory structures, storage hierarchies, and the essential functions and types of operating systems
2	Develop strong logical and analytical thinking skills, enabling the systematic analysis and solution of computational problems using reasoning techniques, algorithms, and flowcharts.
3	Acquire a solid foundation in C programming, mastering the use of data types, operators, control structures, and input/output operations to create efficient and effective programs.
4	Apply advanced programming techniques, including the use of arrays, structures, pointers, and functions, to solve complex real-world problems with a focus on modular and efficient coding practices.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Understand the basic concepts of hardware, software, Operating systems, and the logic behind the functioning of the Computing systems.	U
CO2	Apply logical thinking and reasoning to solve computing problems using tools like algorithms and flowcharts.	Ap
CO3	Understand the structured programming paradigms, memory organization and how the language can be used as a tool to solve problems.	U
CO4	Develop simple programs using data types, operators, control structures, pointers, and functions as appropriate in real world applications.	Ap

FUNDAMENTALS OF COMPUTERS AND COMPUTING Generations of computers, and classification of computers (supercomputers, mainframes, minicomputers, microcomputers). Processing Units (CPU, GPU, TPU),	6 Hours

Signature of BOS Chairman, IT

memory (RAM, ROM), storage devices and hierarchy, input / output and peripheral devices. System software, application software. Operating Systems - Functions (process management, memory management, file system management, device management, security), types of operating systems (desktop, mobile, networking, distributed, real-time, embedded). Number Systems: Introduction to different number systems (binary, octal, decimal, hexadecimal), conversions between number systems, and binary arithmetic (addition, subtraction, multiplication, division).					4 Hours				
Practical Component Exploring hardware and software components									
LOGICAL THINKING, REASONING AND TOOLS Problem Analysis – Logical Thinking vs Critical Thinking vs Design Thinking - Inference – Inductive Reasoning – Deductive Reasoning – Logical Thinking Tools: Algorithms: Definition and importance, characteristics of algorithms (finite, clear and unambiguous, well-defined inputs and outputs, feasible). Algorithm representation Techniques: Pseudocode, stepwise refinement, and top-down design. Flowcharts: Symbols used in flowcharts, creating flowcharts, and examples of flowchart-based problem-solving.					8 Hours				
Practical Component Algorithm writing and Flowcharts,					4 Hours				
PROGRAMMING PARADIGMS AND INTRODUCTION TO C PROGRAMMING Programming Paradigms: Structured programming - functional programming - object-oriented programming. Introduction to C Programming: History of C - features of C - structure of a C program – input / output statements. Data Types: Primitive data types (int, char, float, double) - derived data types, typecast. Operators: Arithmetic operators - relational operators - logical operators - bitwise operators - assignment operators - operator precedence. Conditional Statements: If - if-else - nested if - switch-case. Looping Statements: For loop - while loop - do-while loop. Pre-processor Directives and Command line arguments, Storage Classes.					11 Hours				
Practical Component Programs on Operator precedence, Decision Making, Iterations					10 Hours				
ARRAYS AND STRUCTURES Collections: Arrays – 2D Arrays – String Manipulation. Structures and Unions: Definition - declaration - accessing members - differences between structures and unions - applications.					10 Hours				
Practical Component Programs on Arrays, Structures, Union,					6 Hours				
POINTERS AND FUNCTIONS Pointers: Definition - declaration - pointer arithmetic - pointers and arrays. Functions: Definition - declaration - types of functions (user-defined, library functions) - parameter passing (by value, by reference) pointers and functions, recursion.					10 Hours				
Practical Component Pointers and Functions. Additional programs on Files to be discussed.					6 Hours				
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

Course Content	
OVERVIEW OF DIGITAL SYSTEMS AND BOOLEAN ALGEBRA Introduction to Digital Systems - Analog vs. Digital Signals – Digital System Design Process- Number base conversions, complements, signed binary numbers – Binary codes- Boolean Algebra and its properties, Boolean functions, Simplification of Boolean functions using Boolean algebra- Canonical and standard forms.	7 Hours

 Signature of BOS Chairman, IT

Practical Component Study of logic gates 1. Implement Boolean functions using logic gates and validate the outputs with truth tables				4 Hours	
COMBINATIONAL LOGIC CIRCUITS Overview of Digital Logic Circuits - Simplification of four-variable Boolean functions using Karnaugh maps- Realization of logic gates using NAND and NOR gates –Analysis and design of Combinational Logic Circuits -Half adder, Full adder, Half subtractor, Full subtractor-Code converters - Decoders, Encoders - Multiplexers, Demultiplexers. Practical Component 1. Design and construct half adders, full adders, half subtractors, and full subtractors. 2. Create combinational circuits to solve real-world problems. 3. Develop a code converter circuit using logic gates. 4. Design and implement decoder and encoder circuits. 5. Construct multiplexers and demultiplexers and incorporate them into circuit designs.				8 Hours	
SEQUENTIAL LOGIC CIRCUITS SR, JK, D, T flip-flops, Edge-triggering and level-triggering - Asynchronous and synchronous counters - Decade counter, Ring counter - Shift registers (SISO, SIPO, PISO, PIPO). Practical Component 1. Implement and test various types of shift registers. 2. Design and build a synchronous and asynchronous counter.				8 Hours	
LOGIC FAMILIES AND PROGRAMMABLE DEVICES Introduction to digital logic families, RTL, ECL, TTL and CMOS - Programmable Logic Devices - Programmable Logic Array (PLA), Programmable Array Logic (PAL) - Implementation of combinational logic circuits using PLA and PAL. Practical Component 1. Study of VHDL models for combinatorial circuits.				7 Hours	
Theory Hours: 30				Tutorial Hours: 0	
Practical Hours: 30				Project Hours: 0	
				Total Hours: 60

24HST101	தமிழர் மரபு / HERITAGE OF TAMILS (Common to all Departments)	L	T	P	J	C
		1	0	0	0	1
HS		SDG		4, 11, 16		

Pre-requisite courses	-	Data Book / Code book (If any)	-
-----------------------	---	--------------------------------	---

Course Objectives:

The purpose of taking this course is to:

1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அம்சங்களை அறிமுகப்படுத்துதல், அதன் தொன்மைக்காலம் முதல் நவீனகாலம் வரையிலான வளர்ச்சியை விளக்கம் செய்யுதல். Introduce students to the foundational aspects of Tamil language and literature, tracing its evolution from ancient to modern times.
2	தமிழகத்தின் செழுமையான கலாச்சார பாரம்பரியத்தை அறிமுகப்படுத்துதல், பாறை ஓவியக் கலையிலிருந்து நவீன சிற்ப கலையின்படி அதன் கலை வெளிப்பாடுகளை ஆராய்தல். Familiarize students with the rich cultural heritage of Tamil Nadu, exploring its artistic expressions from rock art paintings to contemporary sculptures.
3	தமிழகத்தின் நாட்டுப்புறக் கலைகள் மற்றும் வீரவிளையாட்டுகளை அறிதல்- திணைக்கோட்பாடுகளை ஆராய்தல்- இந்திய தேசிய இயக்கத்தில் தமிழர்களின் பங்கினை அறிதல். To know the folk arts and heroic ames of Tamilnadu-explore the concept of thinai -to know the role of Tamils in Indian National movement.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அறிவை மேம்படுத்துதல். மொழி பண்பாட்டில் எவ்வாறு இணைந்துள்ளது என்பதை உணர்தல். Enhance the fundamental knowledge of Tamil language and literature	U
CO2	பழங்கால பாறை ஓவியங்கள், சிற்பம் என கலைகள் நவீன காலம்வரை எவ்வாறு பயணிக்கிறது என்பதை புரிந்துகொள்ளுதல். Understand the heritage, rock art paintings to modern art sculpture	U
CO3	நாட்டுப்புறக் கலைகள் தற்காப்புக் கலைகளாகவும், உடல் ஆரோக்கியத்தை மேம்படுத்தும் விதமாகவும் அமைவதை அறிந்து கலைகள் மீதான ஆர்வத்தை அதிகரிக்கச் செய்தல்- தமிழர்களின் அகத்திணை, புறத்திணை கோட்பாட்டினை புரிந்து கொள்ளுதல். இந்திய பண்பாட்டில் தமிழர்களின் பங்களிப்பை அறிதல். Acquire essential knowledge in the folk and martial arts-understanding the Agam and puram concept- to know the contribution of Tamils in Indian culture.	Ap

Course Content

மொழி மற்றும் இலக்கியம்

இந்திய மொழிக் குடும்பங்கள் – திராவிட மொழிகள் – தமிழ் ஒரு செம்மொழி – தமிழ் செவ்விலக்கியங்கள் - சங்க இலக்கியத்தின் சமய சார்பற்ற தன்மை – சங்க இலக்கியத்தில் பகிர்தல் அறம் – திருக்குறளில் மேலாண்மைக் கருத்துக்கள் – தமிழ்க் காப்பியங்கள், தமிழகத்தில் சமண பௌத்த சமயங்களின் தொடக்கம் -பக்தி இலக்கியம், ஆழ்வார்கள் மற்றும் நாயன்மார்கள் – சிற்றிலக்கியங்கள் – தமிழில் நவீன இலக்கியத்தின் வளர்ச்சி – தமிழ் இலக்கிய வளர்ச்சியில் பாரதியார் மற்றும் பாரதிதாசன் ஆகியோரின் பங்களிப்பு.

LANGUAGE AND LITERATURE

Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

3 Hours

மரபு – பாறை ஓவியங்கள் முதல் நவீன ஓவியங்கள் வரை – சிற்பக்கலை

நடுகல் முதல் நவீன சிற்பங்கள் வரை – ஐம்பொன் சிலைகள்– பழங்குடியினர் மற்றும் அவர்கள் தயாரிக்கும் கைவினைப் பொருட்கள், பொம்மைகள் – தேர் செய்யும் கலை – சுடுமண் சிற்பங்கள் – நாட்டுப்புற தெய்வங்கள் – குமரிமுனையில் திருவள்ளுவர் சிலை – இசைக் கருவிகள் – மிருதங்கம், பறை, வீணை, யாழ், நாதஸ்வரம் – தமிழர்களின் சமூக பொருளாதார வாழ்வில் கோவில்களின் பங்கு.

HERITAGE – ROCK ART PAINTINGS TO MODERN ART SCULPTURES

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

3 Hours

நாட்டுப்புறக் கலைகள் மற்றும் வீர விளையாட்டுகள்

தெருக்கூத்து, கரகாட்டம், வில்லுப்பாட்டு, கணியான் கூத்து, ஒயிலாட்டம், தோல்பாவைக்கூத்து, சிலம்பாட்டம், வளரி, புலியாட்டம், தமிழர்களின் விளையாட்டுகள்.

FOLK AND MARTIAL ARTS

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Ciabatta, Valari, Tiger dance - Sports and Games of Tami

3 Hours

Signature of BOS Chairman, IT

தமிழர்களின் திணைக்கோட்பாடுகள் தமிழகத்தின் தாவரங்களும், விலங்குகளும் – தொல்காப்பியம் மற்றும் சங்க இலக்கியத்தில் அகம் மற்றும் புறக்கோட்பாடுகள் – தமிழர்கள் போற்றிய அறக்கோட்பாடு – சங்ககாலத்தில் தமிழகத்தில் எழுத்தறிவும், கல்வியும் – சங்ககால நகரங்களும் துறைமுகங்களும் – சங்ககாலத்தில் ஏற்றுமதி மற்றும் இறக்குமதி – கடல்கடந்த நாடுகளில் தமிழர்களின் வெற்றி. THINAI CONCEPTS OF TAMIL Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.	3 Hours
இந்திய தேசிய இயக்கம் மற்றும் இந்திய பண்பாட்டிற்குத் தமிழர்களின் பங்களிப்பு இந்திய விடுதலைப் போரில் தமிழர்களின் பங்கு – இந்தியாவின் பிறப்பகுதிகளில் தமிழ்ப் பண்பாட்டின் தாக்கம் – சுயமரியாதை இயக்கம் – இந்திய மருத்துவத்தில், சித்த மருத்துவத்தின் பங்கு – கல்வெட்டுகள், கையெழுத்துப்படிகள் - தமிழ்ப் புத்தகங்களின் அச்ச வரலாறு. CONTRIBUTIONS OF TAMIL TO INDIAN NATIONAL MOMENT AND INDIAN CULTURE Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.	3 Hours

		0	0	2	0	1
ES		SDG	9, 11, 12			

Pre-requisite courses	-	Data Book / Code book (If any)	-
------------------------------	---	---------------------------------------	---

Course Objectives:	
The purpose of taking this course is to:	
1	analyse the effectiveness of systems thinking and problem-solving methodologies in applying data-driven insights for innovative solution design.
2	evaluate the impact of transdisciplinary collaboration on creating functional hardware prototypes through fabrication techniques.
3	understand the future trends and implications of technology in developing innovative products.

Course Outcomes:		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	recall the fundamental principles of custom hardware design.	R
CO2	understand the appropriate tools and their applications for solving hardware-related problems.	U
CO3	apply systems engineering concepts to real-world hardware design challenges.	Ap

		0	0	2	0	1
HS		SDG		2, 3		
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:	
The purpose of taking this course is to:	
1	introduce first-year students to the foundational concepts of holistic wellness, emphasizing the integration of physical, mental, emotional, and Internal well-being.
2	create a balanced lifestyle that promotes overall health and happiness through practical activities.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	understand the basic principles of holistic wellness.	U
CO 2	apply strategies for maintaining physical health, including nutrition and exercise	Ap
CO 3	practice mindfulness techniques to enhance mental and emotional well-being.	Ap
CO 4	develop a personal wellness plan incorporating various aspects of holistic health.	C

4						2					3		

Course Content	
INTRODUCTION TO HOLISTIC WELLNESS: - Overview of holistic wellness: physical, mental, emotional, and internal health. - The importance of balance in overall well-being. - Hands-on activity: Self-assessment of current wellness status.	4 Hour
PHYSICAL WELLNESS: - Importance of physical activity and exercise. - Understanding nutrition and its role in health.	14 Hours

Signature of BOS Chairman, IT

- Sleep hygiene and its impact on well-being. - Hands-on activity: Designing a personalized fitness and nutrition plan.	
MENTAL AND EMOTIONAL WELLNESS: - Stress management techniques. - The role of Yoga, mindfulness and meditation in mental health. - Emotional intelligence and its impact on relationships. - Hands-on activity: Practicing Yoga, mindfulness and emotional regulation exercises.	6 Hours
INTERNAL WELLNESS: - Exploring the concept of Internal wellness. - The role of purpose and meaning in life. - Introduction to meditation and reflective practices. - Hands-on activity: Developing a personal reflection, Yoga and meditation routine.	4 Hours
INTEGRATING WELLNESS PRACTICES: - Combining physical, mental, emotional, and Internal wellness practices into daily life. - Developing a balanced wellness plan. - Hands-on activity: Creating a comprehensive personal wellness plan.	2 Hours
Theory Hours: 0	Tutorial Hours: 0
Practical Hours: 30	Project Hours: 0

		2	0	0	0	0
VA		SDG		3, 9, 12, 15		
Pre-requisite courses		Data Book / Code book (If any)				

Course Objectives:	
The purpose of taking this course is to:	
1	provide students with a comprehensive understanding of how emerging technologies like AI, IoT, blockchain, big data, and automation are revolutionizing various industries. Focusing on sectors such as agriculture, education, healthcare, gaming, music, law, and textiles, the course explores the application of these technologies to develop innovative solutions that enhance productivity, sustainability, and user engagement. Students will analyze the impact of digital tools on transforming key sectors and evaluate strategies to improve operational efficiency, creativity, and adaptability. Additionally, the course examines the disruption of traditional business models by these technologies, equipping students with the skills to leverage these changes for innovation and competitiveness in a rapidly evolving landscape.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	understand the role of digital tools in education and healthcare for enhancing user engagement and fostering innovation.	U
CO2	outline the role of technologies in enhancing agricultural practices to demonstrate how these technologies can improve productivity and sustainability in farming.	U
CO3	relate the key technological applications of emerging domains that enhance operational efficiency and creativity.	R

24MAI124	MULTIVARIATE CALCULUS AND FORECASTING (Common to AD, CS, IT)	L	T	P	J	C
		3	0	2	0	4
BS		SDG		7, 9		
Pre-requisite courses	24MAI114/ Applied Linear Algebra and Calculus	Data Book / Codes books (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	understand the techniques of evaluating double and triple integrals and applying them to calculate areas and volumes.
2	familiarize students with vector field concepts such as gradient, divergence, and curl, and apply the theorems of Green, Gauss, and Stokes.
3	develop an understanding of the least squares method for fitting various types of curves and its application in forecasting.
4	equip students with knowledge of time series analysis, including construction, trend measurement, and seasonal variation determination.
5	introduce students to numerical methods such as interpolation, numerical differentiation, and numerical integration.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply double and triple integrals with constant and variable limit concepts to compute areas and volumes in cartesian coordinates.	Ap
CO 2	calculate gradient, divergence, and curl, and verify Green's theorem, Gauss's divergence theorem, and Stokes' theorem in a given vector field.	Ap
CO 3	assess the reliability of predictions using goodness-of-fit measures like R^2 , RMSE, MAE, and MAPE for the method of least squares to fit linear, parabolic, cubic, and non-linear curves.	An
CO 4	analyze time series data, and measure trends using methods like moving averages and assess seasonal variations through appropriate techniques.	An
CO 5	apply Newton's interpolation techniques for both forward and backward interpolation, perform numerical differentiation.	Ap
CO 6	apply the concepts of Trapezoidal and Simpson's rules for numerical integration.	Ap

Course Content	
MULTIPLE INTEGRALS Double integration – Cartesian coordinates – Change of order of integration – Triple integration in Cartesian coordinates –Area as double integral and Volume as triple integral. Practical Component - Double and triple integration with constant and variable limits. - Area as double integral and volume as triple integral.	9 Hours 6 Hours
VECTOR CALCULUS Gradient, divergence and curl – Directional derivative – Irrotational and Solenoidal vector fields - Green's theorem in a plane, Gauss divergence theorem and Stoke's theorem (Only statements excluding proofs) Practical Component - Evaluation of gradient, divergence, and curl - Verification of Green's theorem in the plane	9 Hours 6 Hours
CURVE FITTING AND FORECASTING Method of least squares – Fitting a linear curve, second-degree parabolic curve, cubic curves and non-linear curves of the form $y = ae^{bx}$, $y = ab^x$, $y = ax^b$ by the method of least squares – Forecasting Using Fitted Curves – Assessing the reliability of predictions using goodness-of-fit measures such as R^2 , Adjusted R^2 , RMSE (Root Mean Square Error), MAE (Mean Absolute Error), and MAPE (Mean Absolute Percentage Error). Practical Component - Fitting polynomials curve by Least Square method. - Fitting non-linear curves by Least Square method.	9 Hours 6 Hours
TIME SERIES Time series – Components of Time series – Construction of Time series – Measurement of Trend: Determination of trend by moving averages – Measurement of Seasonal Variations: Method of Simple Average, Ratio to Trend Method and Ratio to moving average method.	9 Hours

Signature of BOS Chairman, IT

Practical Component - Time series construction and Measurement of Trend by Moving Averages. - Simple Average, Ratio to Trend Method and Ratio to Moving Average Method to determine seasonal variations in a time series dataset	6 Hours
NUMERICAL DIFFERENTIATION AND INTEGRATION Interpolation – Newton’s forward and backward interpolation – Newton’s divided difference interpolation – Numerical differentiation by using Newton’s forward, backward and divided differences – Numerical integration by using Trapezoidal and Simpson’s 1/3rd and 3/8th rules	9 Hours
Practical Component - Numerical Differentiation - Newton’s divided differences. - Numerical Integration using Trapezoidal and Simpson’s rule.	6 Hours

Theory	Tutorial	Practical	Project	Total
Hours: 45	Hours: 0	Hours: 30	Hours: 0	Hours: 75

24CSI103	COMPUTER GRAPHICS (Common to AD, CS, IT)	L	T	P	J	C
		2	0	2	0	3
BS		SDG		9		
Pre-requisite course	24PHI101/Applied Physics for Computing	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	identify and differentiate between various types of 2D graphics, including raster and vector formats.
2	apply key design principles to create and manipulate vector graphics using industry-standard tools.
3	explain the stages of the 3D graphics pipeline, from modelling to rendering.
4	demonstrate proficiency in 3D object manipulation and sculpting by creating fully rendered 3D models.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	develop a comprehensive understanding of 2D and 3D graphics principles by creating a project that integrates graphics and basic 3D models.	U
CO 2	apply graphics software tools to create and manipulate 2D and 3D graphics and understand the various techniques for 3D modelling.	Ap
CO 3	apply advanced design principles and techniques to develop aesthetically pleasing and functional graphic compositions, in both 2D and 3D environments.	Ap
CO 4	analyse and evaluate the effectiveness of graphic designs by assessing the application using Modelling and sculpting.	An

Course Content

Concepts of 2D Graphics and Digital Imaging	4 Hours
--	----------------

Signature of BOS Chairman, IT

Importance of 2D Graphics Types of 2D Graphics: Raster vs. Vector, Introduction to Graphics Software, Understanding Pixels and Resolution, Color Models: RGB, CMYK, Grayscale, Common Raster Formats: JPEG, PNG, BMP.						
Vector Graphics: Design Principles and Techniques Vector Graphics Basics & Design Principles and Techniques: Vector vs. Raster: Differences and Use Cases, Paths, Anchors, and Control Points, Primary, Secondary, and Tertiary Colours, Color Harmony, Contrast, and Balance, Basics of Typography Fonts, Choosing and Pairing Fonts, Image Cropping, Resizing, and Scaling, Clipping Masks, Filters, and Effects, Working with Transparency and Alpha Channels. Case study: OpenGL and WebGL for graphics.					8 Hours	
Practical Component 1. Creating a Pixel Art Character 2. Design a Vector Logo 3. Apply Image Manipulation Techniques					8 Hours	
Exploring 3D Graphics: Key Applications and Workflow Key Applications of 3D Graphics: Games, Animation, VR/AR, Understanding the 3D Pipeline: Modelling, Texturing, Lighting, Rendering, Introduction to 3D Software Tools ,3D Space and Axes: X, Y, Z -Viewports, Cameras, and Perspective in 3D, Navigation Tools: Panning, Zooming, Rotating Views.					6 Hours	
Practical Component 1. Create a Custom Texture for a 3D Object					4 Hours	
3D Object Manipulation and Transformation Techniques Working with Objects and Transformations, Types of 3D Objects: Primitives (Cube, Sphere, Cylinder, etc.), Basic Object Manipulation: Move, Rotate, Scale, Understanding Local vs. Global Transformations – Mesh-Faces, Edges, and Vertices - Editing Meshes: Edit Mode vs. Object Mode - Extrusion, Loop Cuts, and Extrusion tools.					6 Hours	
Practical Component 1. Model a Simple Object Using Primitives 2. Extrude and Shape a Simple 3D Model					8 Hours	
Advanced 3D Modeling, Sculpting, and Texturing Methods Modelling & Sculpting, Modifiers: Subdivision Surface, Mirror, Solidify, Using Modifiers for Efficient Modelling, Combining Modifiers to Create Complex Shapes, Basic Sculpting Tools and Brushes, Use Sculpting vs. Traditional Modelling. Materials: Basic Shaders: Diffuse, Glossy, and Transparency, Applying and Editing Basic Materials on Objects Mapping, Creating and Editing UV Maps, Applying 2D Textures to 3D Objects.					6 Hours	
Practical Component 1. Apply Materials to a 3D Object 2. Sculpt a Simple Organic Shape 3. Model a Low-Poly Character. 4. Create a UV Map for a 3D Object. 5. Design and Apply a Texture to a 3D Object					10 Hours	
Theory Hours:	30	Tutorial Hours:	0	Practical Hours:	30

			3	0	2	0	4
ES			SDG		9		
Pre-requisite courses			Data Book / Code book (If any)		-		

Course Objectives:

The purpose of taking this course is to:

1	gain a comprehensive understanding of core data structures (arrays, lists, stacks, queues, trees, graphs) and algorithms, and how they are applied in solving computational problems.
2	develop the ability to analyze and evaluate the time and space complexity of algorithms using notations such as Big O, Big Theta, and Big Omega, helping in making optimal algorithmic choices for different applications.
3	acquire hands-on skills to implement and manipulate linear and non-linear data structures (linked lists, binary trees, heaps, hash tables) for real-world software development scenarios, improving program efficiency and memory management.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	understand various data structures and their application as tools for effective problem-solving.	U
CO 2	identify appropriate linear and non-linear data structures to solve specific computational challenges.	Ap
CO 3	analyze the efficiency and effectiveness of different algorithms by examining time and space complexities and evaluate their performance in solving problems.	An
CO 4	develop programs that employ suitable data structures, individually or in combination, to create efficient solutions for complex challenges.	Ap

Course Content

INTRODUCTION TO DATA STRUCTURES AND ALGORITHMS	6 Hours
---	----------------

Signature of BOS Chairman, IT

Introduction to Data Structures and Algorithms, Importance of data structures in programming and software development, data types vs data structures, Abstract Data Types (ADTs), Algorithm analysis: Big O, Big Theta, Big Omega notations Practical Component Implementation of List ADT using arrays	4 Hours			
LINEAR DATA STRUCTURES Lists: unordered and ordered lists, insertion, deletion and display operations, Stacks: Implementation, Applications in expression evaluation, Queues: Implementation, Variants (Circular Queue, Priority Queue), Applications, Dynamic Memory Implementation: Linked Lists, stack, queue and queues (Single, Double, and Circular linked implementation). Practical Component Implement the applications of Linear Data structures	12 Hours 8 Hours			
NON-LINEAR DATA STRUCTURES Trees: Binary Trees, Binary Search Trees, AVL Trees, Tree Traversal Algorithms: Inorder, Preorder, Postorder. Heap - Binary Heap, Complete Binary Tree, Tree Representation of Binary Heap, Max Binary Heap, Min Binary Heap, Insertion and Deletion in Binary Heap. Graphs: Terminologies, Representation (Adjacency Matrix, List), Graph Traversal (BFS, DFS), Spanning Trees, Shortest Path Algorithms (Dijkstra, Floyd-Warshall). Practical Component Implement the applications of Non-Linear Data structures	12 Hours 8 Hours			
SORTING AND SEARCHING ALGORITHMS Sorting Algorithms: Bubble Sort, Selection sort, insertion sort, Merge Sort, Quick Sort, Heap Sort, Searching Algorithms: Linear Search, Binary Search, Jump search, Exponential search and Interpolation search. Practical Component Implement the Sorting and searching Algorithms	12 Hours 8 Hours			
HASHING TECHNIQUES Hashing: Hash Functions, Collision Resolution Techniques, Linear probing, Quadratic probing, random probing, Double hashing and rehashing, Hashing Applications. Memory Management: Garbage Collection Practical Component Implementation of Hash Table	3 Hours 2 Hours			
Theory Hours: 45	Tutorial Hours: 0	Practical Hours: 30	Project Hours: 0	Total Hours: 75

Pre-requisite course		SDG		9		
Pre-requisite course	24CSI102 - Digital Logic Circuits	Data Book / Code book (If Any)			-	

Course Objectives:

The purpose of taking this course is to:

1	understand the architecture and design challenges of embedded systems and microprocessors, with a focus on microcontrollers like the 8086 and 8051.
2	gain expertise in embedded programming techniques, including interrupt handling, firmware development, and sensor integration.
3	develop practical skills in prototyping embedded systems using real-time operating systems and development boards.
4	design, implement, and optimize embedded applications by integrating multiple sensors and peripherals for real-world scenarios.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	understand the fundamental architecture and operation of embedded systems, including the roles and characteristics of microprocessors and microcontrollers.	U
CO 2	apply programming techniques to manage hardware interrupts and control I/O operations.	Ap
CO 3	implement communication protocols and interface microcontrollers with various sensors and peripherals to build functional embedded systems.	Ap
CO 4	experiment with microcontroller architectures and their internal components to design efficient embedded solutions that meet specific requirements.	Ap
CO 5	analyse the effectiveness of embedded system designs through prototype development, sensor fusion techniques, and perform system-level testing for accuracy.	An

Course Content									
FUNDAMENTALS OF EMBEDDED SYSTEMS AND MICROPROCESSOR Overview of Embedded Systems: Characteristics, system architecture, and design challenges. Introduction to Microprocessors and Microcontrollers- 8086 Microprocessor Architecture-Internal operations - Addressing modes -Instruction formats (Data transfer instructions, Arithmetic instructions, Logical instructions, Branch-and-loop instructions) Interrupts: Software and Hardware interrupts				9 Hours					
Practical Component 1. Set up a development environment, flash the RTOS onto the microcontroller, and configure basic tasks. Verify the installation by running a simple real-time application. 2. Control an I/O connected to a microcontroller				6 Hours					
MICROCONTROLLER ARCHITECTURE 8051 Microcontroller Architecture- Internal Components- Instruction Set Architecture- I/O Ports and Peripherals- Interrupts and Interrupt Handling - Microcontroller Programming -Interfacing. Automotive-grade microcontrollers, Peripheral Interfaces: Basics of CAN, LIN, SPI, I2C for embedded communication. Introduction to RTOS. Case Study on Embedded Development Boards.				9 Hours					
Practical Component 1. Interfacing sensor with a microcontroller and display the sensor readings on an LCD. 2. Combine data from an accelerometer and gyroscope to estimate the orientation of a device. 3. Use interrupts to toggle an LED based on a button press.				8 Hours					
EMBEDDED PROGRAMMING Embedded Programming Fundamentals, Bitwise Operations and Port Control, Interrupt Handling, Firmware Development- Writing, testing, and optimizing firmware for embedded systems applications.				7 Hours					
Practical Component Develop and optimize firmware for a simple embedded application.				8 Hours					
SENSOR INTEGRATION Sensor and Actuators-Overview of temperature sensors, pressure sensors, accelerometers, gyroscopes, and actuators, applications, Sensor Fusion- Techniques for combining data from multiple sensors. System Integration and Case Studies: Developing and testing prototypes using development boards.				5 Hours					
Practical Component Design and implement a small embedded system that integrates multiple sensors and communicates with other devices. (Example, a simple weather station that measures temperature, humidity, and pressure, and sends the data to a central system.)				8 Hours					
Theory Hours:	30	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	60

24INP103	INNOVATION PRACTICUM –2 (Common to All branches)	L	T	P	J	C
ES		0	0	2	0	1
		SDG		9, 11, 12		
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:	
The purpose of taking this course is to:	
1	equip students with essential tools and techniques for leveraging open-source technologies to develop proof-of-concepts and prototypes
2	provide hands-on experience and participants will gain a comprehensive understanding of the entire product development process
3	final prototyping, empowering them to transform their ideas into tangible outcomes

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	analyse the effectiveness of various electronic tools and techniques in product development processes	An
CO 2	develop and implement functional software prototypes using open-source tools	Ap
CO 3	design and fabricate 3D models using digital fabrication techniques	Ap

	1	2	3	4	5	6	7	8	9	10	11		
	Engineering Knowledge	Problem Analysis	Design/Development of Solutions	Conduct Investigations of Complex Problems	Engineering Tool Usage	The Engineer and The World	Ethics	Individual and Collaborative Team work	Communication	Project Management and Finance	Life-Long Learning	PSO 1	PSO 2
1	3	2	2	2	2								
2	2	2	2		2								
3	2	2	3	2	2								

Course Content	
INTRODUCTION TO OPEN-SOURCE TOOLS AND TECHNIQUES Explore the concept of open-source, its underlying principles and its contrast with proprietary software, Discuss the advantages of using open-source tools, such as lower costs, increased innovation, educational value, and community support, walk through to the commonly used open-source tools for electronics design (KiCad, FreeCAD), software development (Python, Eclipse), and fabrication (Cura, LinuxCNC).	3 Hours
ELECTRONICS FUNDAMENTALS AND TOOLS	6 Hours

Signature of BOS Chairman, IT

Introduction to basic electronic components (resistors, capacitors, transistors, etc.), Understanding of electronic circuits and their functions, Hands-on practice with CircuitJS and Falstad, Simulating and analysing electronic circuits, Introduction to Arduino and Raspberry Pi, exploring their capabilities and applications, Designing PCBs using KiCad and EasyEDA, Understanding PCB fabrication processes					
SOFTWARE PROTOTYPING AND TOOLS Benefits of rapid prototyping in product development, Iterative design and testing, Wireframing tools (Balsamiq, Figma), UI design tools (Sketch, Figma), Programming languages (Python, JavaScript), Testing frameworks (Selenium), No-code platforms (Bubble, Adalo, Wix, AppGyver), Building functional prototypes without extensive coding					6 Hours
FABRICATION AND PROTOTYPING Overview of fabrication techniques (3D printing, laser cutting, CNC machining), Prototyping methods for physical products, using tools like Blender, TinkerCAD, or Fusion 360, Creating 3D models for physical prototypes, Hands-on experience with laser cutting and engraving, Understanding their applications and limitations					7 Hours
SIMULATION & DEMONSTRATION Integrated project demonstration, explaining the design process, technical choices, and outcomes, simulation showcase to demonstrate their understanding of various technical tools and prototyping techniques					8 Hours
Theory Hours:	0	Tutorial Hours:	0	Practical Hours:	30
				Project Hours:	0
					Total Hours: 30

		0	0	2	0	1
HS		SDG		3, 4		

Pre-requisite courses	24HSP111 / Holistic Wellness-I	Data Book / Code book (If any)	-
------------------------------	---------------------------------------	---------------------------------------	----------

Course Objectives:	
The purpose of taking this course is to:	
1	build on the foundation laid in Holistic Wellness -I and deepening into the practices and principles of holistic wellness.
2	explore advanced techniques in mental, emotional, and spiritual well-being, with an emphasis on creating sustainable wellness habits.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply advanced techniques in mindfulness, meditation, and stress management.	Ap
CO 2	understand the role of community and social connections in wellness.	U
CO 3	develop resilience and adaptability in maintaining wellness.	E
CO 4	refine and sustain a personalized holistic wellness plan.	E

Course Content	
ADVANCED MINDFULNESS AND MEDITATION: - Deepening mindfulness practices for enhanced mental clarity. - Exploring different forms of meditation (e.g., guided, transcendental, movement-based). - Hands-on activity: Daily meditation practice and journaling reflections.	6 Hours
EMOTIONAL RESILIENCE AND MENTAL HEALTH: - Building emotional resilience through positive psychology practices. - Cognitive-behavioural strategies for managing stress and anxiety.	6 Hours

Signature of BOS Chairman, IT

Hands-on activity: Developing and practicing a resilience toolkit.		
SOCIAL AND ENVIRONMENTAL WELLNESS: - The impact of social connections and community on wellness. - Creating a supportive environment for personal growth. - Hands-on activity: Building a community wellness project or group activity.		6 Hours
INTERNAL GROWTH AND PURPOSE: - Exploring the deeper aspects of internal wellness and self-actualization. - Reflective practices for discovering life purpose and meaning. - Hands-on activity: Creating a vision board or personal mission statement.		6 Hours
SUSTAINING WELLNESS PRACTICES: - Strategies for maintaining wellness habits over the long term. - Adapting wellness plans to life changes and challenges. - Hands-on activity: Revising and finalizing a long-term personal wellness plan.		6 Hours

24INP101	DESIGN THINKING (Common to all Department)	L	T	P	J	C
		0	0	2	0	1
ES		SDG	9			

Pre-requisite courses	-	Data Book / Code book (If any)	-
------------------------------	----------	---------------------------------------	----------

Course Objectives:

The purpose of taking this course is to:

1	introduces first-year engineering students to Design Thinking, focusing on practical, user-centered problem-solving techniques
2	empathize with users, generate ideas, and create models to test and refine their solutions
3	understand iteration, empathy, and critical reflection to cultivate a creative mindset

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply problem-solving techniques and the Design Thinking process to engineering problems using simple models	Ap
CO 2	understand user needs through various empathy techniques and develop/refine models iteratively based on user insights.	U
CO 3	reflect critically on their learning journeys and the emotional demands of problem-solving. Collaborate effectively in teams to develop innovative solutions	Ap

Course Content

Introduction to Problem Solving and Ground Rules

Introduction to problem-solving strategies without mentioning Design Thinking-Emphasize problem-solving attitudes, mindsets, and behaviours necessary for iterative problem solving (e.g., openness to failure, patience, empathy)-Set ground rules for the course, including incentives for creative risk-taking and penalties for non-participation or lack of reflection-Overview of the Design Thinking process and its importance.

6 Hours

Signature of BOS Chairman, IT

Empathy and Problem Definition Techniques for understanding user needs, including observation, interviews, surveys and focus groups -Importance of secondary research as a complement for the above-mentioned methods-Introduction to empathy cycles: involve students in two empathy cycles before and after problem definition-Finetuning problem definition based on user insights.	6 Hours
Ideation and Concept Modelling Brainstorming ideas and selecting feasible solution-Creating concept modelling to visualize ideas-Include an empathy cycle after students propose solutions, allowing them to revisit and reshape their solutions based on further insights from users.	6 Hours
Prototyping and Testing with Models Building basic prototypes using simple materials (e.g., cardboard, clay)- Introduction to different prototyping methods (e.g., low-fidelity vs high-fidelity models) for different contexts: product design, space design, policy, and digital/e-commerce solutions-Conduct an empathy cycle after the prototype is developed to gather user feedback and refine the prototype.	6 Hours
Iteration and Final Modelling Project Students refine their prototypes based on feedback from the empathy cycle-Finalize prototypes for presentation based on consistent feedback loops.	6 Hours
Presentation, Reflection, and Learning Summaries Students present their final projects and reflect on their learning journeys, including how their understanding of problem-solving and empathy evolved during the course- Learning Summary Activity: Each student presents their individual journey and learning outcomes from the empathy cycles and iterations-Peer review and group discussions.	6 Hours

24MAI234	COMPUTATIONAL PROBABILITY AND STATISTICS	L	T	P	J	C
		3	0	2	0	4
BS	(Common to CS, IT, AD)	SDG		3,8		
Pre-requisite courses		Data Book / Code book (If any)			Statistical tables	

Course Objectives:	
The purpose of taking this course is to:	
1	Introduce the concept of random variables and their probability distributions.
2	Expose students to two-dimensional random variables, correlation and regression analysis.
3	Explain the principal components from standardized variables.
4	Provide knowledge of hypothesis testing using small and large sample tests.
5	Explain the principles of experimental design and analysis of variance.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Categorize and illustrate different types of random variables and their corresponding probability distributions.	An
CO2	Analyse joint distributions and relationships using correlation and regression techniques.	An
CO 3	Apply the concept of multivariate analysis to compute covariance and correlation matrices which forms the basis of principle component analysis.	Ap
CO 4	Examine large sample data by appropriate hypothesis testing techniques (Z-tests and Chi-square	An
CO 5	Test small sample data using t and F distributions, interpreting the results accurately.	An
CO 6	make use of ANOVA analysis in experimental design and interpret the results.	Ap

ES		SDG		9		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	---	------------

Course Objectives:	The purpose of taking this course is to:
1	Understand the basic principles and features of object-oriented programming using C++.
2	Explore the use of classes, objects, constructors, destructors, and various forms of inheritance
3	Apply the concepts of function overloading, operator overloading, and polymorphism
4	Use pointers and virtual functions to implement dynamic behaviour in programs.
5	Implement exception handling and generic programming using C++.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Explain the basic principles of OOP and structure of C++ programs.	U
CO 2	Illustrate the use of classes, objects, and access control in program design.	U
CO 3	Apply constructors, destructors, and various inheritance types in solving real-world problems.	Ap
CO 4	Demonstrate function overloading, operator overloading, and polymorphism using pointers.	Ap
CO 5	Implement exception handling and generic programming using C++ templates and Standard Template Library.	Ap

24CSI009	DATABASE MANAGEMENT SYSTEMS (Common to AD, CS, IT)	L	T	P	J	C
PC		3	0	2	0	4
Pre-requisite courses		SDG		9		
Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)			Nil	

Course Objectives:	
The purpose of taking this course is to:	
1	Acquire knowledge of fundamental database concepts, data models, and database system architecture.
2	Develop practical skills in designing relational databases using Entity-Relationship modelling and normalization techniques.
3	Gain competency in using Structured Query Language for data definition, data manipulation, and complex data retrieval.
4	Understand the principles of query processing, optimization, transaction management, and concurrency control in database systems.
5	Develop the ability to analyze database design choices and query strategies for performance, integrity, and compare relational databases with NoSQL alternatives.

Course Outcomes		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Apply relational database concepts to define structures and manage data effectively.	Ap
CO 2	Design and normalize relational database schemas using Entity-Relationship modelling and normalization techniques to ensure data integrity.	Ap
CO 3	Implement relational operations and join strategies using relational algebra and SQL to retrieve and combine data efficiently.	Ap
CO 4	Analyze transaction processing concepts, concurrency issues, and recovery techniques to ensure the consistency and correctness of database systems.	An
CO 5	Apply CRUD operations in NoSQL databases to manage semi-structured and unstructured data effectively.	Ap

Course Content													
INTRODUCTION TO DATABASES AND DATA MODELLING												9 Hours	
Evolution from File Systems to DBMS – Advantages of Using DBMS approach - Types of Data - Data Models - DB Architecture and users - Relational Model Concepts - Attributes, Tuples, Relations and Constraints -Differences between OLAP and OLTP- Introduction to SQL: DDL, DML, Data Types, Constraints and Aggregate Functions.													
Practical Component												6 Hours	
Creation of a database and writing SQL queries to retrieve information from the database - Exploring the use of WHERE, ORDER BY, and limit clauses in SQL - Implement Aggregate Functions.													
RELATIONAL MODELLING AND DATABASE DESIGN												9 Hours	
Logical Database Design: Different approaches in Logical design, ER Modeling, ER notations - Steps in ER modeling. Physical database design: Converting ER Model to Relational Database Design, Normalization -Functional Dependency, 1NF, 2NF, 3NF, Boyce-Codd Normal Form (BCNF) - Decomposition properties.													
Practical Component:												6 Hours	
Implementation of ER Diagram and identifying its entities, relations, attributes and constraints – Converting the ER diagram into relational schema – Convert a relation to 1NF, 2NF, 3NF and BCNF.													
PHYSICAL DATABASE DESIGN AND QUERY PROCESSING												9 Hours	
Overview of File Organization – RAID concepts - Indexing: Single, Multilevel – Dynamic - B+-tree indexing – Hashing Techniques – Static and Dynamic Hashing – Relational Algebra – Translating SQL Queries into Relational Algebra – Joins – Query Optimization: Join Query Optimization – Query Optimization Rules – Tuple Relational Calculus.													
Practical Component:												6 Hours	
Simulation of relational Algebra operations – Performing joins using Relational Algebra – Implementation of various SQL joins.													
TRANSACTION MANAGEMENT AND CONCURRENCY CONTROL												9 Hours	
Transaction Concepts - ACID Properties - Transaction States – Transaction control Commands - Serializability Concepts - Recovery Mechanisms: Undo/Redo, Shadow Paging, Log Based Recovery - Concurrency Control: Locking Protocols, Timestamp Protocols, Deadlock Handling.													
Practical Component:												6 Hours	
Implement multiple transactions using SQL involving BEGIN, COMMIT & ROLLBACK – Write SQL Queries for Nested Transactions.													
NOSQL DATABASE MANAGEMENT												9 Hours	
Introduction to NoSQL Databases – Key Features and Principles of NoSQL – CAP Theorem – Classification of NoSQL Databases- Querying in NoSQL Systems: CRUD operations – NoSQL Query Language Overview													
Practical Component:												6 Hours	
Creation of Database and Performing CRUD operations in NoSQL – Querying with NoSQL databases.

		3	0	2	0	4
PC	(Common to AD, CS, IT)		SDG	8,9		
Pre-requisite courses		Nil		Data Book / Codes / Standards (If any)		

Course Objectives:	
The purpose of taking this course is to:	
1	Understand the fundamentals of AI and its potential for decision making.
2	Introduce the concept of artificial intelligence, methods, techniques and applications
3	Gain practical experience through case studies and hands-on projects.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply the foundational concepts of AI, including intelligent agents, predicate logic, and knowledge representation techniques, to perform logical reasoning.	Ap
CO2	Analyze and implement classical and heuristic search algorithms to solve complex AI problems.	An
CO3	Apply probabilistic reasoning techniques to represent and infer knowledge under uncertainty in AI systems.	Ap
CO4	Analyze decision-making models to optimize AI-driven strategic and sequential decision-making under uncertainty.	An
CO5	Design and implement AI-driven automation systems and workflows using appropriate tools to streamline tasks and enhance operational efficiency across diverse domains.	Ap

Course Content	
INTRODUCTION TO AI	9 Hours

 Signature of BOS Chairman, IT

Fundamentals of AI - Definitions, Key concepts, Intelligent agents, Agents and Environment. Propositional Logic – Agents based on Propositional Logic – First order logic – Syntax and semantics – Knowledge Engineering in First Order Logic– Inference – Unification - Forward and backward chaining - Resolution. Practical Component Intelligent Agent Simulation - Propositional Logic and Knowledge-Based Agent - First Order Logic and Inference (Chaining and Resolution)					6 Hours
PROBLEM SOLVING State space search; production systems, search space control; depth first search, breadth-first search. Heuristic Based Search: Hill climbing, best-first search, A*Algorithm and AO* algorithm, Min-max algorithms, game playing – Alpha beta pruning branch and bound, Problem Reduction, Constraint Satisfaction. Practical Component Implement AI search algorithms such as BFS, DFS, A* and AO* - Develop an AI for Tic-Tac-Toe or Chess using heuristic-based decision-making - Implement a Sudoku solver or a N-Queens problem solver using backtracking and constraint Satisfaction techniques.					9 Hours
REPRESENTING AND REASONING WITH UNCERTAIN KNOWLEDGE Handling uncertainty in AI, Probability theory and its connection to logic, Concepts of independence and conditional probability, Structure of Bayesian Networks, Bayesian rule and its applications, Markov Models and Hidden Markov Models (HMMs), Probabilistic graphical models and Inference algorithms. Practical Component Build and evaluate a Bayesian Network for a real-world problem - Implement Hidden Markov Models (HMM) for sequence prediction tasks					9 Hours
DECISION-MAKING Importance of decision making in AI, Utility, preferences and Expected utility in decision-making under uncertainty, Decision Theory Basics, Markov Decision Processes (MDPs), Game theory and strategic decision-making in AI. Practical Component Implement a simple MDP for decision-making in a dynamic environment - Develop a game-theoretic model for AI-based strategic decision-making					9 Hours
ARTIFICIAL INTELLIGENCE FOR AUTOMATION Understanding Automation, Applications of AI-driven Automation, Opportunities and challenges in AI automation. Automation in production systems-Automation principles and strategies-Basic elements of an automated system. Introduction to Robotic Process Automation- Benefits of RPA, Components of RPA-RPA Platforms-About Ui Path. Practical Component Downloading and installing UiPath Studio - Explore Robotic Process Automation (RPA) tools like UiPath or Automation anywhere - Create a basic automation to extract information from a document and store it in a spreadsheet.					9 Hours

24ADT015	FINANCE, ECONOMICS AND MARKETING (Common to AD, CS, IT)		L	T	P	J	C
HS			3	0	0	0	3
Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)		SDG	8		
					Nil		

Course Objectives:	
The purpose of taking this course is to:	
1	Understand core concepts of managerial economics and apply demand estimation techniques in business decision-making.
2	Gain foundational knowledge of cost and financial accounting for analyzing and preparing basic financial statements.
3	Develop skills in financial statement analysis and cash-flow management for strategic financial planning.
4	Apply marketing principles and research analytics to formulate integrated, data-driven growth strategies.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply core economic concepts (demand, supply, elasticity, utility) to managerial decision-making.	Ap
CO2	Record, summarise and interpret fundamental financial transactions in accordance with generally accepted accounting principles (GAAP/Ind-AS).	Ap
CO3	Analyse and evaluate corporate performance using the three key financial statements and cash-flow-based metrics (EBITDA, FCF, EVA).	An
CO4	Design customer-centred marketing strategies that integrate traditional and digital channels to create, communicate and capture value.	Ap
CO5	Employ data-driven market research and analytics to segment, target and position offerings and to forecast demand under uncertainty.	An

Course Content	
MANAGERIAL ECONOMICS & DEMAND ESTIMATION Managerial goals vs. shareholder value; Law of demand & supply; elasticity (price, income, cross); marginal utility & consumer surplus; exceptions to the law of demand; quantitative & qualitative demand-forecasting techniques (time-series, causal models, Delphi, big-data tools); introduction to behavioural economics for managers.	9 Hours
COST & FINANCIAL ACCOUNTING FUNDAMENTALS Cost concepts—fixed, variable, stepped, sunk, opportunity, relevant; economies & diseconomies of scale; cost-volume-profit analysis; accounting principles & conventions, double-entry system, journal-ledger-trial balance; the accounting equation; preparation of basic Income Statement and Balance Sheet.	9 Hours
FINANCIAL STATEMENT ANALYSIS & CASH-FLOW MANAGEMENT Operating vs. financing & investing cash flows; preparation of the Statement of Cash Flows (IND-AS 7); working-capital management; ratio analysis—liquidity, leverage, profitability, efficiency; advanced cash-flow metrics (EBITDA, FCF, EVA); brief introduction to valuation multiples.	9 Hours
MARKETING PRINCIPLES IN THE DIGITAL ERA Evolution of marketing & the holistic marketing concept; Marketing vs. Selling; customer value & SAisfaction; 7 Ps and extended service mix; product-life-cycle strategies; overview of digital marketing (SEO, SEM, social, content, influencer); omnichannel customer journeys.	9 Hours
MARKET RESEARCH, ANALYTICS & STRATEGIC INTEGRATION Marketing-information systems (MIS); environmental & competitor scanning (PESTLE & Porter 5-forces); STP—segmentation techniques, targeting criteria, positioning maps; basics of marketing analytics (A/B testing, RFM, CLV); integrating finance & marketing for growth strategy—profit-impact of marketing decisions, budgeting, ROI dashboards; capstone case discussion.	9 Hours

<u>Course Content</u>	
MODULE 1 Introduction to Group Discussions - Key skills for effective participation - Phases in a GD - Conversational Phrases in GD. Group Dynamics - Understanding group roles and dynamics - Conflict resolution and management in groups - Techniques for fostering collaboration. Presentations - Introduction to Visual Aids and Technology in Presentations.	6 Hours
Delivery Techniques - Voice modulation and speech clarity - Body language and gestures – audience analysis. Handling Q&A Sessions - Preparing for audience questions - Techniques for handling difficult questions - Mock Presentation with Q&A sessions.	
MODULE 2 Factual Group Discussions: Focus on sharing and verifying accurate information on a given topic. Participants base their contributions on verifiable data and concrete evidence. Opinion-based / Argumentative Group Discussion: Encourages participants to express and defend their point of view on a topic. Evaluate different perspectives and build critical thinking skills.	6 Hours
MODULE 3 Case Study Group Discussion: Involves analyzing the complexities, identifying key issues, and developing insights or solutions based on the group's collective knowledge. Abstract Discussion: Deals with intangible concepts, ideas, or themes without concrete reference points. Encourages creative thinking and theoretical exploration.	6 Hours
MODULE 4 Impromptu Presentations: Participants speak on a given topic with little to no preparation. Helps develop quick thinking and effective communication skills. Informative Presentation: Aims to educate the audience on a specific topic by providing clear, factual information. The focus is on clarity, accuracy, and comprehensiveness. Demonstrative Presentation: Interactive sessions where participants engage in hands-on activities to learn practical skills. Often includes exercises, demonstrations, and collaborative tasks.	6 Hours

Signature of BOS Chairman, IT

MODULE 5 Training and Technical Presentation: Designed to teach specific technical skills or procedures. Includes detailed instructions, demonstrations, and may involve technical jargon. Academic Presentation: Involves presenting research findings or theoretical concepts in an academic setting. Emphasizes clarity, evidence-based arguments, and adherence to scholarly standards. Pitch Presentation: A concise, persuasive presentation aimed at securing support, investment, or approval. Focuses on the value proposition, potential benefits, and unique selling points. Persuasive Presentation: Seeks to convince the audience to adopt a particular viewpoint or take a specific action. Utilizes logical arguments, emotional appeals, and credible evidence. Multimedia Presentations: Uses visual and auditory media to convey information and present arguments. Enhances engagement and aids in illustrating complex concepts.	6 Hours

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
-----------------------	-----	---	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Equip with essential aptitude and reasoning skills commonly assessed in recruitment processes across various industries.
2	Develop proficiency in solving numerical problems related to arithmetic, percentages, ratios, time and work, and other job-relevant topics
3	Improve analytical thinking through practice with syllogisms, coding-decoding, blood relations, and logical sequences.
4	Train to answer questions accurately and efficiently under time constraints, as required in most job aptitude tests.

Course Outcomes:		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Apply fundamental arithmetic concepts to solve real-life and exam-based problems.	Ap
CO 2	Solve time-based problems with logical approaches.	Ap
CO 3	Demonstrate the ability to simplify and solve number system-related problems.	Ap
CO 4	Use deductive reasoning in topics like direction sense, blood relations, and coding-decoding problems.	An
CO 5	Interpret and analyze data sets presented in tables, bar charts, pie charts, and line graphs.	An

RATIO AND PROPORTION, NUMBER SYSTEM Simple Equations, BODMAS rule, Basic proportional, Ratio and Proportions – Common factor multiplication types, Problems with Coins and Rupees, Problems with Income, Expenditure and Savings, Number System – Even and Odd Number Series, Numbers and its Digits, Arithmetic Operations on Number system	6 Hours
AVERAGES AND PERCENTAGES, PROFIT AND LOSS Basic percentage calculations, Percentage increase/decrease, Successive percentage changes, Averages - Weighted average, Moving averages, Application-based problems, Profit and Loss- Cost price, selling price, and marked price, Profit and loss percentage, Successive discounts	6 Hours
TIME AND WORK, PIPES AND CISTERNS Work Efficiency, Combined Work, Alternative Work, Efficiency and Time unknown Problems, Same Group of Members Working Together, Different Group of Members Working Together, Pipes and Cisterns – Filling Time Calculations, Tank Capacity Calculations	6 Hours
BLOOD RELATIONS, CODING AND DECODING Family tree problems, Coded and complex relationships, Puzzle-based questions, Coding and Decoding – Single Word Coding, Two Word Coding, Number Coding, Letter and Number Coding, Symbol Coding	6 Hours
SEATING ARRANGEMENTS, DIRECTION SENSE Linear Arrangements, Circular, Square and Rectangular (Facing centre and Facing Outward) Arrangements, Complex Arrangements, Cardinal directions, Angle and distance calculation, Shadow-based reasoning	6 Hours

Theory	Tutorial	Practical	Project	Total
Hours: 0	Hours: 0	Hours: 30	Hours: 0	Hours: 30

		0	0	2	0	0
		SDG		9		
VA						

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
-----------------------	-----	--	-----

Course Objectives:	The purpose of taking this course is to:
1	Introduce the fundamental syntax and programming constructs of Python.
2	Develop proficiency in using Python's core data structures, including lists, tuples, and dictionaries, and implementing modular code with functions.
3	Understand and apply Object-Oriented Programming (OOP) principles using Python classes and objects.
4	Implement robust file I/O operations and exception handling mechanisms for building reliable applications.
5	Familiarize students with essential data manipulation libraries such as NumPy and Pandas.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO1	Construct basic Python programs using variables, data types, operators, and control flow statements.	Ap
CO2	Develop modular programs by defining functions and utilizing data structures like lists, tuples, and dictionaries for effective data management.	Ap
CO3	Apply object-oriented principles to create classes, objects, and implement inheritance to model real-world problems.	Ap
CO4	Implement file handling operations to read and write data from text and CSV files and incorporate exception handling for robust code.	Ap
CO5	Utilize NumPy and Pandas libraries to perform fundamental data manipulation, filtering, and cleaning tasks on datasets.	An

PYTHON BASICS Python syntax, Variables, Data Types (int, float, string), Type Casting, I/O, Arithmetic & Logical Operators. Conditional Statements: if, if-else, if-elif-else. Iterative Statements: for loop, while loop, break, continue.	6 Hours
FUNCTIONS, STRINGS, LISTS AND DICTIONARIES Defining functions, arguments (positional, keyword), return values, Lambda functions. String handling: slicing, strip(), split(). Lists: creation, indexing, methods (append, remove, sort). Tuples: characteristics, indexing, methods. Dictionaries: Key-value pairs, methods (get, keys, items, update).	6 Hours
OOPS CONCEPTS OOP concepts. Creating Classes and Objects, self parameter, __init__ method. Inheritance (Single, Multilevel), Method Overriding.	6 Hours
FILE HANDLING AND EXCEPTION HANDLING Reading and writing files, file modes (r, w, a), with statement. Working with text and CSV files. Understanding exceptions. try-except-finally, Raising custom exceptions.	6 Hours
PYTHON LIBRARIES Introduction to NumPy, Arrays, creation, and operations. Pandas Library: Series, DataFrames. Data Manipulation (filtering, sorting). Handling Missing Data.	6 Hours

		3	0	0	0	3
BS		SDG		8,9		

Pre-requisite courses	-	Data Book / Codes books (If any)	-
------------------------------	---	---	---

Course Objectives:	
The purpose of taking this course is to:	
1	Introduce students to the fundamentals of logical reasoning and the construction of mathematical proofs.
2	Develop problem solving skills using mathematical induction, permutations, combinations and recurrence relations.
3	Provide a strong foundation in graph theory concepts including graph isomorphism and shortest path algorithms.
4	Formulate real world optimization problems as linear programming models and solve them effectively using graphical, simplex and Big-M methods for optimal decision making.
5	Solve optimization problems with and without constraints using Lagrange multipliers and Kuhn-tucker conditions.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Validate the logical arguments and develop basic mathematical proofs using formal reasoning techniques.	Ap
CO 2	Employ mathematical induction for validating mathematical statements, and apply the principles of permutations, combinations and recurrence relations in problem solving.	Ap
CO 3	Examine graph isomorphism and implement Dijkstra's algorithm to identify the shortest path in a graph.	An
CO 4	Formulate and solve linear programming problems using graphical, simplex and Big-M methods.	Ap
CO 5	Analyse and determine the extreme values of functions under unconstrained, equality constrained and inequality constrained conditions.	An

24ITT203	COMPUTER ORGANIZATION AND ARCHITECTURE (Common to CS, IT)	L	T	P	J	C
		3	0	0	0	3
		SDG		4,9		
PC						

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
-----------------------	-----	---	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Introduce the basic structure and functional components of a computer system, including its evolution, Von Neumann architecture, and performance parameters.
2	Explain the internal organization of a basic computer, focusing on instruction formats, addressing modes, and the distinction between CISC and RISC architectures.
3	Explore arithmetic and logic unit (ALU) operations including integer and floating-point computations.
4	Examine memory hierarchy, cache, and I/O system designs and their impact on performance.
5	Explore modern advancements in computer architecture, including multicore processors, parallel architectures, and multiprocessor systems with interconnection structures and synchronization techniques.

Course Outcomes:		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Identify and explain the structure, functional units, performance characteristics of computer systems	U
CO 2	Apply arithmetic algorithms to perform for addition, subtraction, multiplication, and division with correctness and efficiency in problem-solving tasks.	Ap
CO 3	Apply the concepts of instruction execution, multiple bus organization, and control unit design to implement control logic using hardwired and microprogrammed approaches.	Ap
CO 4	Explain the operations of I/O subsystems and memory architectures, and describe the roles of programmed I/O, interrupts, DMA, RAM, cache, and memory hierarchy in data transfer and system performance.	U
CO 5	Utilize the principles of pipelining, hazard management, and parallel processing architectures such as superscalar, multicore, and GPU acceleration to improve performance in real-time computing systems.	Ap

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	---	------------

Course Objectives:	
The purpose of taking this course is to:	
1.	Illustrate the basic concepts, architecture, and protocols of computer networks, including the OSI and TCP/IP models.
2.	Familiarize students with networking hardware (routers, switches, firewalls) and basic configuration principles.
3.	Explore the functionalities, differences, and use-cases of major transport protocols such as TCP (Transmission Control Protocol) and UDP (User Datagram Protocol).
4.	Explain the basic security principles such as confidentiality, integrity, availability and explore common threats, vulnerabilities and encryption techniques.

Course Outcomes		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Understand the principles of data communication and functionalities of standard network reference models.	U
CO 2	Apply error detection methods and flow control techniques to ensure reliable data transmission in network communications.	Ap
CO 3	Implement routing algorithms to recommend optimal paths for efficient packet switching and internetworking.	Ap
CO 4	Apply congestion control mechanisms to assess their effectiveness and identify the functionalities of application layer protocols	Ap
CO 5	Construct a secure data communication model using standard cryptographic algorithms for cyber defense.	Ap

Course Content	
INTRODUCTION TO MACHINE LEARNING Definition and scope of Machine Learning-Types of Machine Learning: Supervised, Unsupervised, Semi-supervised, Reinforcement-Steps in a Machine Learning project-Data Preprocessing-Feature selection and normalization-Performance evaluation metrics- Accuracy, Precision, Recall, F1-Score, ROC-AUC-Overfitting and Underfitting -Applications of Machine Learning	7 Hours
SUPERVISED LEARNING Regression Techniques- Linear Regression, Polynomial Regression, Ridge and Lasso Regression- Classification Algorithms- K-Nearest Neighbors, Decision Trees, Random Forests, Naïve Bayes, Support Vector Machines- Evaluation of Supervised Models – Confusion Matrix, Cross-validation, Bias-Variance tradeoff- Case Studies and Practical Implementation	8 Hours
UNSUPERVISED LEARNING Clustering Techniques- K-Means- Hierarchical- DBSCAN - Dimensionality Reduction- PCA- LDA- t-SNE-Association Rule Mining – Apriori and FP-Growth Algorithms- Anomaly and Outlier Detection-Applications of Unsupervised Learning in Real-World Domains	10 Hours
ENSEMBLE LEARNING AND INTRODUCTION TO DEEP LEARNING Ensemble Methods- Bagging, Boosting, Stacking- Random Forest and Gradient Boosting Models - Introduction to Deep Learning- Neural Networks- Perceptron- Activation Functions-Architecture of Deep Neural Networks-Optimization Techniques- Gradient Descent- Backpropagation-Introduction to CNN and RNN – Concepts and Applications	12 Hours
RECOMMENDER SYSTEMS AND APPLICATIONS Introduction to Recommender Systems - Collaborative Filtering – User-based and Item-based-Content-based and Hybrid Recommendation Techniques-Matrix Factorization and Latent Factor Models-Deep Learning-based Recommendation- Autoencoders- Neural Collaborative Filtering-Evaluation Metrics for Recommender Systems-Applications in E-commerce, Media, and Healthcare	8 hours
PROJECT	30 hours

Signature of BOS Chairman, IT

To design and develop a comprehensive machine learning pipeline that processes real-world datasets through data preprocessing, supervised and unsupervised learning, ensemble techniques, and deep learning fundamentals. The project must include classical regression and classification models, clustering and dimensionality reduction methods, ensemble algorithms, and a recommender system component, culminating with explainable ML insights and model evaluation using industry-standard metrics. Final Deliverables (Presentation & Report) • GitHub repo with code, data samples, and README • 10-minute project presentation with visuals • Final report summarizing problem, methods, datasets, results, and future work

Course Objectives:

The purpose of taking this course is to:

1	Introduce the concept and significance of value education in shaping a meaningful and fulfilling life.
2	Enable students to understand the human being as a co-existence of self and body and the harmony within.
3	Develop an understanding of harmony in relationships, family, and society.
4	Help students appreciate the interconnectedness and harmony in nature and existence.
5	Instill the importance of ethical behavior in personal, professional, and social contexts.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Understand the foundational concepts of value education and human aspirations.	U
CO2	Analyze the human being as a holistic entity comprising self and body.	An
CO3	Evaluate and cultivate harmonious relationships within the family and society.	E
CO4	Interpret the interconnectedness in nature and recognize harmony in existence.	U
CO5	Apply holistic understanding to professional ethics and sustainable living.	Ap

Course Content	
Career Awareness and Goal Setting - Exploring Varied Career Options Beyond Engineering - Industry Roles - Startups and Entrepreneurial Ventures - Research Opportunities and Higher Education - Public Sector and Non-Profit Careers - Self-Assessment and Personal Reflection - Identifying Strengths, Weaknesses, Skills, and Career Aspirations - Setting Short-Term and Long-Term Career Goals	6 Hours
Fundamentals of Interview Preparation - Analysing Company Background and Understanding Job Roles - Aligning Career Goals with Job Opportunities - Professional Etiquette and Appearance - Interview Dress Code, Grooming, and First Impression - Resume and Digital Profile Readiness - Types of interviews: personal, behavioural, stress, virtual, and panel	6 Hours
Behavioural Interviews – Responding with Purpose - Introduction to behavioural interviews: What and Why? - Common behavioural interview questions - The STAR technique (Situation – Task – Action – Result) - Identifying and reflecting on past experiences - Mapping soft skills to behavioural questions - Practicing concise storytelling - Active listening and adapting responses	6 Hours

Signature of BOS Chairman, IT

Stress Interviews – Performing Under Challenging Situations • Understanding stress interviews: Purpose and setting • Types of stress tactics (rapid-fire questions, silence, disagreement, interruptions) • Strategies to stay composed and confident • Emotional regulation and response control • Maintaining clarity, tone, and respect under pressure • Practicing assertive and professional body language • Turning pressure moments into strengths	6 Hours
Panel Interviews • What is a panel interview? Structure and expectations • Understanding panel roles (HR, technical, managerial) • Techniques for engaging with a diverse panel • Managing eye contact, addressing questions, and body posture • Preparing multi-perspective answers • Handling follow-up or cross-questions • Strategies for closing the interview with impact	6 Hours

Innovation Fundamentals Master Class #1: Explore the core concepts of product design and development. Master Class #2: Introduction to the Forge Innovation Handbook (FIH) and its applications. Workshop #1: Utilize the FIH Canvas to identify challenges, validate problems, understand user needs, and define pain points, gains, and value propositions.	3 Hours
Advanced Prototyping Techniques Master Class #3: Rapid Prototyping Techniques - 1. Master Class #4: Rapid Prototyping Techniques - 2. Hack Time #1: Engage in hands-on experimentation to test core assumptions, refine the Proof of Concept (PoC). Incorporate rapid prototyping techniques and iterate on the design to enhance functionality.	6 Hours
Intellectual Property and Proof of Concept Master Class #5: Gain insights into intellectual property (IP) and prior art search. Hack Time #2: Develop and refine a working prototype. Build a Minimum Usable Prototype (MUP) based on feedback and iteration.	6 Hours
Build the Minimum Usable Prototype (MUP) Hack Time #3: Enhance the prototype through iterative improvements. Utilise feedback from mentoring sessions to make targeted adjustments and refinements, optimising the prototype's functionality and design based on practical insights. Hack Time #4: Develop the Minimum Usable Prototype (MUP). Build the final version of the MUP incorporating all iterative refinements. Ensure that it meets the defined criteria and is ready for comprehensive testing and presentation.	7 Hours
Perfect Pitch and Product Showcase Hack Time #5: Conduct a final demonstration and technical testing of the prototype. Create a compelling pitch to articulate the value proposition and potential impact of the innovation, aimed at securing support or funding. Pitch Presentation and MUP Demonstration: Students showcase their completed prototype through a comprehensive demonstration, highlighting its key features and functionalities to Industry experts, incubators and investors. They deliver a compelling pitch that clearly communicates the innovation's impact, market potential, and benefits. This presentation aims to effectively convey the value of the prototype, engage potential stakeholders, and secure support or funding opportunities.	8 Hours

<u>Course Content</u>													
Introduction Introduction to Cloud Computing-History and Evolution of Cloud Computing-Types of clouds-Private,Public and hybrid clouds-Cloud Computing architecture-Cloud computing infrastructure, Merits of Cloud computing, Cloud computing delivery models and services (IaaS, PaaS, SaaS), obstacles for cloud technology, Cloud vulnerabilities, Cloud challenges, Practical applications of cloud computing.												06 Hours	
Practical Component Use VirtualBox or VMware to simulate a mini cloud environment with multiple VMs, Assign roles like web server, database, and load balancer.												06 Hours	
Core Cloud Services Compute Services: Understanding virtual machines- containers- serverless computing and their role in building cloud applications. Storage Services: Different types of storage- object storage- block storage-file storage-Examples. Networking Services: Understanding virtual private clouds (VPCs), load balancing, content delivery networks (CDNs). Database Services: Understanding managed database services-Types-Examples.												06 Hours	
Practical Component Deploy and connect to a virtual machine using the cloud console or CLI, Upload, manage, and share files from an object storage bucket, Create a custom VPC with subnets and route tables.												06 Hours	
Cloud Security and Compliance Security Principles: Cloud security fundamentals- identity and access management (IAM)-data encryption (In Transit and At Rest)-secure coding practices. Compliance: Regulatory requirements and industry standards- HIPAA-GDPR Security. Tools and Technologies: Security groups, firewalls, security measures.												06 Hours	
Practical Component Create users, assign policies, and test access control in AWS or Azure, Use HTTPS for communication and enable encryption options for S3 or block storage, Define and apply security group rules to control traffic to a VM instance.												06 Hours	
Cloud Computing - Challenges, Risk and Mitigation Scalable and Elastic Architectures: Principles of scalability and elasticity in cloud environments- load balancing-stateless services-microservices architecture- Auto-scaling. Fault Tolerance and Disaster Recovery: Concepts of fault isolation, redundancy, and high availability- multi-zone and multi-region architectures for resiliency- Backup and restore strategies, data replication, and failover mechanisms- Disaster recovery planning- Recovery Time Objective (RTO) and Recovery Point Objective (RPO). Infrastructure as Code (IaC): Introduction to Infrastructure as Code and its benefits-Tools Comparison of popular IaC tools (Terraform, AWS CloudFormation, Pulumi, and Ansible).												06 Hours	
Practical Component Implement auto-scaling based on CPU utilization or load, Document RTO and RPO, simulate failover between primary and secondary regions												06 Hours	
Advanced Cloud Technologies Containerization and Orchestration: Introduction to Containers- Fundamentals of containerization and its advantages- Docker(image creation, Dockerfiles, container												06 Hours	

Signature of BOS Chairman, IT

lifecycle, and container registries). Container Orchestration: Kubernetes architecture- pods, services, deployments, namespaces, and volumes- CI/CD pipelines with containerized applications. Serverless Computing: Function-as-a-Service (FaaS) and Backend-as-a-Service (BaaS)- Serverless Platforms- Use Cases and Design Patterns. Practical Component Build a Dockerfile and run a container locally or on a cloud platform, Use GitHub Actions or GitLab CI to build and deploy a container image automatically, Write and deploy a serverless function using AWS Lambda or Google Cloud Functions.	06 Hours

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	-----	---	-----

Course Objectives:	The purpose of taking this course is to:
1	Understand the basic concepts, structure, and key functions of operating systems.
2	Learn how operating systems manage hardware, processes, memory, and files.
3	Analyze different process scheduling, synchronization, and memory allocation techniques.
4	Gain hands-on experience in simulating and implementing OS functionalities.
5	Explore real-world applications of operating systems, including virtualization.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Interpret the evolution, architecture and functionalities of Operating Systems.	Ap
CO 2	Design and analyze process scheduling strategies and synchronization techniques.	An
CO 3	Apply inter-process communication and concurrency control in modern systems.	Ap
CO 4	Implement memory management schemes and virtualization strategies.	Ap
CO 5	Analyze the design and functionality of file systems and real-time operating systems.	An

<u>Course Content</u>	
Operating System Fundamentals and Process Management	9 Hours
Introduction: OS Services - OS Structures: Monolithic, Layered, Modular, Micro-kernel - Process Concept, Lifecycle, Process Control Block, Process Scheduling Queues - System Calls, User Mode and Kernel Mode, Interrupts - Threads: User-level, Kernel-level, Thread Models	
Practical Component	6 Hours
- Linux File System & Shell Scripting. - Process Management in Linux (Creating process using fork(), observing orphan & Zombie states)	
CPU Scheduling and Deadlocks	9 Hours
Scheduling Basics: Preemptive & Non-Preemptive - CPU Scheduling Algorithms: FCFS, SJF, Priority, Round Robin - Multiprocessor Scheduling - Deadlock: Conditions, Resource Allocation Graph - Deadlock Handling: Prevention, Avoidance, Detection & Recovery	
Practical Component	6 Hours
- Simulation of CPU scheduling algorithms (FCFS, SJF, Priority, RR) - Banker's Algorithm to detect safe/unsafe states	
Concurrency and Synchronization	9 Hours
Inter-process Communication - Synchronization: Peterson's Solution, Bakery Algorithm, Hardware Support - Semaphores, Monitors, Classical Problems (Dining Philosophers, Readers-Writers) - IPC in Unix Systems - Locking in Multiprocessors: Scalable Locks, Lock-free Coordination	
Practical Component	6 Hours
- Implement process synchronization using semaphores/monitors - Solve Dining Philosophers problem using threads and semaphores	
Memory Management and Virtualization	9 Hours
Main Memory Management – Main Memory Allocation Strategies – Paging and Segmentation – Hardware Support: Address Translation, Translation Lookaside Buffer (TLB), Caching – Virtual Memory and Demand Paging – Page Replacement Algorithms: FIFO, LRU, Optimal – Thrashing and Working Set Model – Virtualization Concepts: Hardware and Software Virtualization, Server and Network Virtualization – Hypervisors: Type-1 and Type-2 – Containers – Cost of Virtualization.	
Practical Component	6 Hours
- Implement dynamic memory allocation algorithms (First-fit, Best-fit, Worst-fit) - Simulation of Page Replacement Algorithms (FIFO, LRU, Optimal) Virtualization setup: Type-1 & Type-2 Hypervisor	
File Systems, Storage, and RTOS	9 Hours
File System Interface: Access Methods, Directory Structures - Implementation: File Allocation, Directory Management - File Recovery: Journaling, Soft Updates, Log-structured FS - Distributed File Systems - Disk Structure, Disk Scheduling (Seek Time, Rotational Latency) – RTOS Introduction – RTOS Scheduling – RTOS Examples and Use cases - OS Performance, Scalability, Trends in Mobile OS	
Practical Component	6 Hours
Implement file locking mechanisms in Linux	

Signature of BOS Chairman, IT

2. Real-Time Task Scheduling and Synchronization using FreeRTOS (or any RTOS simulator)

Course Objectives:	The purpose of taking this course is to:
1	To equip students with foundational knowledge of web development technologies, including HTML, CSS, JavaScript, and Bootstrap.
2	To enable students to build dynamic and responsive web applications using ReactJS and integrate backend services with NodeJS and ExpressJS.
3	To provide hands-on experience in database management using MongoDB and deploying applications using Git and cloud platforms.
4	To foster problem-solving skills and teamwork through practical implementation of full-stack development concepts.
5	To familiarize students with modern development workflows, version control, and deployment practices used in industry.

Course Outcomes	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Create well-structured and styled web pages following modern web development standards.	Ap
CO 2	Apply knowledge to develop interactive and dynamic web applications with effective front-end and back-end communication.	Ap
CO 3	Utilize server-side concepts to build efficient APIs and implement middleware for enhancing application functionalities.	Ap
CO 4	Perform database operations, including data modelling and management, to support dynamic applications.	Ap
CO 5	Deploy web applications effectively to hosting platforms and implement version control to manage collaborative development.	Ap

Course Content

HTML, CSS AND JAVASCRIPT

HTML – Basics - Bootstrap – Introduction - grid system – components – utilities - JavaScript – Fundamentals - DOM manipulation – events - basic ES6 features - Web Development Stack - Full Stack – Introduction – Types: MERN, MEAN, MEVN, LAMP, Ruby on Rails, Django, NET, JAMSTACK

Practical Component

Web page creation using HTML and CSS – Client-side Scripts creation and Validation of Web Form Controls using JavaScript – Responsive landing page design using Bootstrap- AI Tools – CoPilot, ChatGPT

9 Hours

6 Hours

REACTJS

Introduction to React – Components – JSX – props – lifecycle - state - Advanced React – Hooks - context API - basic routing

Practical Component

Application building using React and API integration – Implementation of Hooks and context API in the platform– AI tools – Copilot, Claude

9 Hours

6 Hours

NODEJS AND EXPRESSJS

NodeJS – Basics – modules - npm – ExpressJS - Setting up a server – routing - middleware

Practical Component

Setting up a RESTful API - middleware implementation for user authentication– AI tools – Copilot, Claude

9 Hours

6 Hours

INTEGRATION WITH MONGODB

MongoDB – Basics – Connecting MongoDB with Node.js – MongoDB Native Driver – Mongoose for Schema and Model Management – Async/Await Database Operations – Authentication and Security – REST API Development using MongoDB and Node.js

Practical Component

Record management system using MongoDB – schema creation using Mongoose– AI tools – Copilot, Claude

9 Hours

6 Hours

DEPLOYMENT WITH GIT

Git - Version control - Branching and merging - Deployment concepts - Environment variables - Deploying applications using platforms like Heroku and Vercel - AI-assisted development using Anthropic Claude and OpenAI ChatGPT.

Practical Component

Deploy a full stack application to Heroku or Vercel - Manage version control for a collaborative project using Git branching and merging. – AI tools – Claude, ChatGPT

		3	0	2	0	4
PC		SDG		9		

Pre-requisite courses	24CSI104 Data Structures and Algorithms	Data Book / Codes / Standards (If any)	NIL
Course Objectives:			
The purpose of taking this course is to:			
1	Understand fundamental algorithmic problem-solving techniques and the importance of algorithmic analysis in various problem types, data structures, and efficiency classes.		
2	Explore advanced algorithmic paradigms like Divide and Conquer, Greedy Strategy, Dynamic Programming, Backtracking, Branch and Bound for solving complex problems.		
3	Analyze the efficiency of algorithms using theoretical and empirical methods considering their time complexity and space complexity.		
4	Investigate computational complexity theory, including P, NP, NP-complete, and NP-hard problems, and the use of approximation algorithms in optimization.		

Course Outcomes:		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO1	Apply algorithmic problem-solving strategies and analyze the performance of recursive and non-recursive algorithms using asymptotic notations.	Ap
CO2	Apply divide and conquer techniques to solve computational problems and use recurrence solving methods to determine the efficiency of recursive algorithms.	Ap
CO3	Apply greedy and dynamic programming approaches to solve optimization problems and evaluate their efficiency.	Ap
CO4	Analyze combinatorial problems using backtracking and branch-and-bound strategies to derive optimal solutions.	An
CO5	Analyze problem complexity to classify problems as P, NP, NP-complete, or NP-hard and examine approximation techniques for solving hard problems.	An

Course Content	
FOUNDATIONS OF ALGORITHM ANALYSIS Fundamentals of algorithmic problem solving – Important problem types – Analysis framework – Asymptotic notations and basic efficiency classes – Mathematical Analysis: Recursive algorithms, non-recursive algorithms - Brute Force String matching.	7 Hours
Practical Component Implement and compare recursive vs. iterative algorithms - Analyze different algorithmic performance – Brute Force String matching.	4 Hours
DIVIDE AND CONQUER Divide and conquer: Solving recurrences: Substitution method, recursion-tree method, master method. The maximum-subarray problem - Multiplication of large integers – Strassen’s matrix multiplication.	10 Hours
Practical Component Implement and analyze the maximum subarray problem using divide and conquer – Implement Strassen’s matrix multiplication algorithm.	6 Hours
GREEDY STRATEGY AND DYNAMIC PROGRAMMING Greedy algorithms: Fractional Knapsack Problem - Activity selection problem – Huffman codes. Elements of dynamic programming - Matrix chain multiplication - Longest Common Subsequence (LCS) - 0/1 Knapsack problem and memory functions – Optimal binary search trees - All Pairs Shortest Paths: Floyd-Warshall Algorithm.	12 Hours
Practical Component Construct Huffman coding tree for data compression - Implement Matrix chain multiplication - Solve Longest Common Subsequence (LCS) Problem - Implement 0/1 knapsack problem using memory functions.	8 Hours
BACKTRACKING, BRANCH AND BOUND Backtracking strategy: N-Queens Problem – Hamiltonian circuit problem – Subset Sum problem – Graph Coloring. Branch and bound strategy: Assignment problem - Traveling Salesperson Problem - 0/1 knapsack problem.	9 Hours
Practical Component Apply backtracking to solve the N-Queens problem - Implement backtracking approach to perform Graph Coloring using minimum number of colors - Apply Branch and Bound technique to solve the Travelling Salesman Problem for optimal tour cost.	8 Hours

Signature of BOS Chairman, IT

COMPUTATIONAL COMPLEXITY AND APPROXIMATION ALGORITHMS Polynomial time, Polynomial-time verification, P and NP problems, NP-Complete problems – NP-Hard problems – NP-completeness and reducibility - Introduction to Approximation Algorithms: vertex-cover problem – Randomization and linear programming; Subset-sum problem. Practical Component Implement the Vertex-Cover Problem using a Greedy Approximation Algorithm.	7 Hours

				1	0	2	0	2
HS				SDG		6, 13, 15		
Pre-requisite courses		-	Data Book / Code book (If any)			-		

Course Objectives:

The purpose of taking this course is to:

1	To introduce the importance, types, and conservation strategies of natural resources, with a focus on sustainable practices in water and food management.
2	To understand the structure and function of ecosystems and biodiversity, and explore the need for conservation through the study of hotspots and global environmental concerns.
3	To examine the causes and effects of environmental degradation, including pollution and waste management, and to promote mitigation strategies for sustainable development.
4	To provide knowledge of the legal and institutional frameworks for environmental protection in India and globally, including critical environmental acts and enforcement challenges.
5	To explore conventional and alternative energy resources, and to assess methods for energy conservation and carbon footprint reduction through audits and sustainability measures.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply the concept of natural resource conservation to demonstrate sustainable practices	Ap
CO2	Analyse the structure, function, and adaptive capacity of ecosystems to categorize threats and conservation strategies for biodiversity.	An
CO3	Analyse various forms of environmental degradation and propose management and preventive solutions.	An
CO4	Apply national environmental laws and frameworks in the personal and professional contexts	Ap
CO5	Design strategies using renewable energy principles to develop sustainable energy utilization plans through audits and footprint analysis to transfer a healthy environment for future generations.	Ap

		3	0	2	0	4
PC		SDG		9		
Pre-requisite courses	24CSI207 Database Management Systems	Data Book / Code book (If any)		NIL		

Course Objectives:	
The purpose of taking this course is to:	
1	Acquire knowledge of Big Data characteristics, challenges, and the fundamental architecture of the Hadoop ecosystem.
2	Develop practical skills in using Hadoop commands, writing basic MapReduce jobs, and utilizing ecosystem tools like Hive and Pig.
3	Understand the core concepts of Apache Spark for faster, in-memory data processing and analytics.
4	Gain familiarity with different types of NoSQL databases and their use cases compared to traditional RDBMS.
5	Learn the basic principles of real-time data processing using streaming frameworks like Kafka and Spark Streaming.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Apply commands and APIs to manage data within distributed file systems and execute jobs using cluster resource managers.	Ap
CO 2	Apply distributed processing frameworks to implement data processing tasks on a cluster.	Ap
CO 3	Analyze the architectural components and data flow within core Big Data technologies and compare different NoSQL database categories for specific use cases.	An
CO 4	Analyze the suitability and trade-offs of different Big Data processing frameworks based on criteria like speed, fault tolerance, and programming model.	An
CO 5	Apply design choices and configure parameters to enhance performance, scalability, resource utilization, and fault tolerance in Big Data systems and applications through practical implementation and optimization.	Ap

24ITI007	MOBILE APPLICATION DEVELOPMENT	L	T	P	J	C
		2	0	2	0	3
PC		SDG		9		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	---	------------

Course Objectives:	The purpose of taking this course is to:
1	Understand the concepts of native, hybrid, web, and cross-platform mobile application development using modern development frameworks.
2	Develop responsive and interactive mobile applications.
3	Apply mobile application development techniques for implementing device-specific features such as location services, user interaction, and activity management.
4	Build mobile applications integrated with databases, responsive interfaces, and cross-platform deployment strategies using modern development tools.
5	Utilize AI-assisted mobile application development tools for UI design, code generation, debugging, testing, and deployment of mobile applications.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Understand the fundamental concepts, classifications, and characteristics of mobile and web applications including development approaches.	U
CO 2	Design and develop responsive user interfaces that adapt to different device screens and user contexts.	Ap
CO 3	Build cross-platform applications incorporating graphical user interface components and basic user input validation techniques.	Ap
CO 4	Implement mobile application features that utilize device-specific functionalities for location awareness and activity management.	Ap
CO 5	Design and implement cross-platform applications with features for user interaction, task management, and data visualization using modern development frameworks	Ap

Course Content	
FUNDAMENTALS OF MOBILE & WEB APPLICATION DEVELOPMENT Basics of Web and Mobile application development, Native App, Hybrid App, Cross-platform App, Overview of Flutter architecture, Installing flutter SDK Practical Component Design a basic responsive web page that displays a user's profile (name, photo, and bio) properly on both mobile and desktop views using HTML5 and CSS3, create hello world app using flutter environment.	6 Hours 6 Hours
DART PROGRAMMING FUNDAMENTALS Variables, data types, operators, expressions, functions, object oriented programming, classes, collections, null safety, async programming. Practical Component Develop a hello world using Dart, implement OOP examples.	6 Hours 6 Hours
CROSS-PLATFORM APP DEVELOPMENT USING FLUTTER Implementing widgets in flutter, stateless vs stateful widgets, layout widgets, rows, columns, containers, stack, navigation and routing, forms and user input, event handling, grids, styling, responsive UI design Practical Component Create a simple mobile application using flutter to fetch and display the current geographic location of the user using the device's GPS sensor.	6 Hours 6 Hours
DATA HANDLING AND API INTEGRATION JSON parsing, REST API Integration, HTTP package, future builder, stream builder, local storage and firebase basics, flutter packages, camera integration, gps, notifications, file handling. Practical Component Fetch API data, create sample app, manipulate local user data, camera capture app, location tracking app.	6 Hours 6 Hours
DEPLOYMENT AND PUBLISHING Build APK and app bundle, release configuration, publishing to google play store, app store, CI/CD overview Practical Component Develop a small app, release and simulate deployment. AI Tools: ChatGPT, GitHub Copilot	6 Hours 6 Hours

24CSI015	SOFTWARE ENGINEERING AND AGILE PRACTICES	L	T	P	J	C
		3	0	0	2	4
PC		SDG		9		

Pre-requisite courses	24CSI008 Object Oriented Programming	Data Book / Codes / Standards (If any)	Nil
------------------------------	---	--	------------

Course Objectives:		The purpose of taking this course is to:
1	Understand fundamental software engineering principles, processes, and SDLC models for building quality software systems.	
2	Apply software project management techniques including planning, scheduling, estimation, risk management, and team organization.	
3	Comprehend Agile values, principles, and frameworks such as Scrum, Kanban, and Extreme Programming (XP).	
4	Implement software testing strategies including unit, integration, system, and acceptance testing in both traditional and Agile contexts.	
5	Apply software quality standards, metrics, and process improvement models (CMMI, ISO) to real-world software projects.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Explain SDLC phases and process models; analyze their applicability to real-world software projects using appropriate tools.		An
CO 2	Apply software project management techniques: effort estimation (COCOMO II), scheduling, risk analysis, and SCM using Git and JIRA.		Ap
CO 3	Implement Agile practices including Scrum ceremonies, Kanban boards, sprint planning, backlog grooming, and retrospectives.		Ap
CO 4	Design and execute comprehensive software testing strategies including TDD, black-box, white-box, and automated testing using JUnit/Selenium.		Ap
CO 5	Evaluate software quality using ISO/IEC 25010 metrics and CMMI; integrate DevOps practices using CI/CD pipelines in Agile environments.		E

Course Content	
SOFTWARE ENGINEERING FUNDAMENTALS Introduction to Software Engineering – Software characteristics, types and myths – Software crisis – SDLC overview – Process models: Waterfall, Incremental, Spiral, RAD, and Prototype model – Unified Process – Requirements Engineering: elicitation, specification, functional and non-functional requirements, use case modelling – Software design concepts: cohesion, coupling, modularity, layered architecture – UML basics: class, sequence, and activity diagrams – Coding standards and best practices. Practical Component: Mini-Project: Requirements and Design Phase Students form project teams and identify a real-world problem. Activities include: (a) eliciting and documenting functional and non-functional requirements using a requirements specification template, (b) drawing use case diagrams and activity diagrams using draw.io or StarUML, (c) creating a class diagram for the proposed system, and (d) preparing a project charter document. Deliverable: Software Requirements Specification (SRS) document.	9
AGILE METHODOLOGIES Agile Manifesto: 12 principles and 4 values – Agile vs Traditional approaches – Scrum framework: Product Owner, Scrum Master, Development Team – Scrum artefacts: Product Backlog, Sprint Backlog, Increment – Scrum ceremonies: Sprint Planning, Daily Stand-up, Sprint Review, Sprint Retrospective – Kanban: WIP limits, boards, flow metrics, cumulative flow diagrams – Extreme Programming (XP): pair programming, TDD, CI, refactoring – Lean Software Development principles – SAFe overview – Agile estimation: Story Points, Planning Poker – Agile metrics: velocity, burndown charts, cycle time. Practical Component: Mini-Project: Agile Sprint Simulation Students execute a two-sprint Agile simulation on their project: (a) groom the product backlog with at least 15 user stories with acceptance criteria, (b) conduct a Sprint Planning meeting and commit to a sprint backlog, (c) maintain a physical or digital Kanban board (Trello/JIRA) updating task status daily, (d) produce a sprint burndown chart, (e) conduct a Sprint Review and Retrospective and document outcomes, and (f) calculate team velocity and forecast the next sprint capacity. Deliverable: Sprint 1 report with burndown chart and retrospective notes.	6

24CSC001	UI AND UX DESIGN (Common to CS, IT, AD)	L	T	P	J	C
		2	0	2	0	3
PE		SDG		9		

Pre-requisite courses		Data Book / Codes / Standards (If any)	
------------------------------	--	---	--

Course Objectives:	The purpose of taking this course is to:
1	Apply UI/UX design concepts and empathy techniques to identify user needs and develop user-centered solutions.
2	Understand design thinking methods for solving user experience problems.
3	Gain skills in visual design and UI component creation.
4	Practice wireframing, prototyping, and usability testing.
5	Use tools like Figma to build interactive user interfaces.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply UI and UX design concepts along with empathy techniques to identify user needs and propose suitable user-centered design solutions	Ap
CO 2	Apply UI design principles to implement visual design standards and UI components to enhance user interaction.	Ap
CO 3	Conduct UX research using at least two industry-relevant techniques to align user goals with business objectives	Ap
CO 4	Create and evaluate responsive wireframes and prototypes using iterative testing methods for a given user scenario	An
CO 5	Design an interactive, user-centered interface using essential Figma tools and techniques	Ap

Course Content	
INDUSTRY-RELEVANT DESIGN THINKING Understanding UI vs. UX Design, Design Thinking Framework, Innovative Thinking Methods, Empathy Techniques for User Insights. Practical Component 1. Create User Personas and Empathy Maps for a selected product idea. 2. Apply Design Thinking methodology to identify and solve a user problem. 3. Design a project board and visual theme using Canva.	6 Hours 6 Hours
UI DESIGN PRINCIPLES FOR INDUSTRY Visual Design Standards, UI Components and Design Patterns, User Interaction and Engagement, Branding Integration and Style Guides. Practical Component 1. Explore and analyze common UI components and interaction patterns. 2. Design a responsive user interface layout using Figma. 3. Create a UI Style Guide with colors, typography, and components.	6 Hours 6 Hours
UX RESEARCH AND STRATEGY IN THE INDUSTRY UX Fundamentals for Business Impact Design Process, Industry Research Techniques, Aligning User and Business Goals Practical Component 1. Perform competitor analysis and user research for a digital product. 2. Develop user journey maps aligning user and business goals. 3. Create a pattern library including fonts, colors, and reusable assets.	6 Hours 6 Hours
WIREFRAMING, PROTOTYPING AND TESTING Sketching Principles - Sketching Red Routes - Responsive Design – Wireframing - Creating Wireflows - Building a Prototype - Building High-Fidelity Mockups - Designing Efficiently with Tools - Interaction Patterns - Conducting Usability Tests - Other Evaluative User Research Methods - Synthesizing Test Findings -Prototype Iteration. Practical Component 1. Design low-fidelity wireframes and wireflow diagrams for an application. 2. Develop an interactive prototype using Figma 3. Conduct usability testing and refine the prototype based on feedback.	6 Hours 6 Hours
LOW CODE -NO CODE TOOLS Low code- No code Design Tools -Essential Concepts of Figma - Setup and Configure Figma - Images, Shapes, and Tools - Working with Figma - Figma Components - Styles and Libraries in Figma - Cards and Layout Grids in Figma. Practical Component 1. Configure a Figma workspace and create basic UI screens. 2. Create and manage layout grids and Auto Layout features in Figma. 3. Design reusable components and build a shared design library.	6 Hours 6 Hours

24CSC002	iOS APPLICATION DEVELOPMENT USING SWIFT (Common to CS, IT, AD)	L	T	P	J	C
		2	0	2	0	3
PE		SDG		9		

Pre-requisite courses	24CSI008 Object Oriented Programming	Data Book / Codes / Standards (If any)	NA
------------------------------	---	---	----

Course Objectives:		The purpose of taking this course is to:
1	Understand the fundamentals of Swift programming language and develop basic programming logic using Swift Playground.	
2	Familiarize students with the Xcode development environment and debugging techniques for building iOS applications	
3	Apply Swift programming concepts such as operators, control structures, functions, and collections in problem-solving.	
4	Implement advanced Swift concepts including optionals, enumerations, segues, and navigation controllers in mobile application development.	
5	Design and develop interactive multi-screen iOS applications using UIKit components and view controller lifecycle management.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply Swift programming constructs to develop and execute basic code snippets using playgrounds within a defined timeline.		Ap
CO 2	Analyze and debug Swift programs in Xcode to ensure error-free execution through systematic testing and validation.		Ap
CO 3	Construct Swift programs using operators, conditionals, and loops to solve well-defined programming problems with measurable logic and correctness.		An
CO 4	Analyze and implement advanced Swift programming concepts such as optionals, enumerations, segues, and navigation controllers in mobile applications.		An
CO5	Design and develop multi-screen iOS applications using controllers, and view controller lifecycle methods for efficient application flow management.		Ap

Course Content	
INTRODUCTION TO SWIFT PROGRAMMING AND CONTROL STRUCTURES	6 Hours
Introduction to Swift and Playgrounds - Constants, Variables - Naming Constants and Variables, Data Types - Type Safety - Type Inference - Operators - Basic Arithmetic - Numeric Type Conversion - Logical and Comparison Operators - Control Flow - If Statements - If Else Statements- Switch Statements.	
Practical Component	6 Hours
1. Implement basic arithmetic and logical operations using Swift Playground 2. Develop programs using conditional statements (if-else and switch). 3. Design and develop a simple Calculator application using Swift.	
XCODE ENVIRONMENT AND INTERFACE BUILDER ESSENTIALS	6 Hours
Xcode - Xcode Files Types - Xcode Preference - Building, Running, and Debugging an App - Interface Builder Basics - Storyboards - Interface Builder Layout - Outlets And Actions.	
Practical Component	6 Hours
4. Explore Xcode environment, project structure, and debugging tools 5. Create user interfaces using Storyboards, Outlets, and Actions 6. Design and develop a Light App using Interface Builder.	
UIKIT FUNDAMENTALS AND USER INTERFACE	6 Hours
Introduction to UIKit Strings - Concatenation and Interpolation - String Equality and Comparison - Functions - Parameters - Return Values - Structures - Instances - Instance Methods - Classes and Inheritance Collections - Arrays - Dictionaries - Loops - For Loops - While Loops .Common System Views - View Controllers - Displaying Data Controls In Action - Buttons - Switches - Sliders - Text Fields - Actions and Outlets - Auto Layout and Stack Views.	
Practical Component	6 Hours
1. Develop applications using strings, functions, collections, and loops. 2. Create interactive user interfaces using UIKit controls and Auto Layout. 3. Design and develop a Color Picker or Xylophone application.	
ADVANCED SWIFT CONCEPTS AND NAVIGATION TOOLS	6 Hours
Optionals - Functions and Optionals - Type Casting and Inspection - Guard - Guard with Optionals - Constant and Variable Scope - Enumerations - Segues and Navigation Controllers.	6 Hours
.Practical Component	
1. Implement programs using optionals, type casting, and enumerations. 2. Create multi-screen applications using Segues and Navigation Controllers. 3. Design and develop a Traffic Light application with screen navigation.	
APP NAVIGATION AND VIEW CONTROLLER LIFECYCLE	6 Hours
Navigation Controllers - Tab Bar Controllers - View Controller Life Cycle- View Did Load - View Event Management	
Practical Component	6 Hours
1. Develop applications using Navigation Controllers and Tab Bar Controllers. 2. Demonstrate View Controller Life Cycle events and event management. 3. Design and develop a Simple Alarm application using Tab Bar Controller.

		2	0	2	0	3
PE		SDG		9		

Pre-requisite courses	24CSI015 Software Engineering and Agile Practices	Data Book / Codes / Standards (If any)	
-----------------------	---	--	--

Course Objectives:	The purpose of taking this course is to:
1	To apply software testing concepts and techniques to ensure software quality and reliability.
2	To learn how to do the testing and planning effectively
3	To build test cases and execute them
4	To focus on wide aspects of testing and understanding multiple facets of testing
5	To get an insight about test automation and the tools used for test automation

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply fundamental software testing concepts and techniques to evaluate and ensure quality in software systems	Ap
CO 2	Apply test planning techniques to effectively organize, prioritize, and schedule testing tasks in a structured test strategy.	Ap
CO 3	Design and execute test cases using manual and automated methods to validate functional requirements in software systems.	Ap
CO 4	Analyze various testing types and levels to determine their appropriateness in given scenarios.	An
CO 5	Evaluate and utilize software test automation tools to improve testing efficiency and coverage.	An

ADVANCED TESTING CONCEPTS Performance Testing: Load Testing, Stress Testing, Volume Testing, Fail-Over Testing, Recovery Testing, Configuration Testing, Compatibility Testing, Usability Testing, Testing the Documentation, Security testing, Testing in the Agile Environment, Testing Web and Mobile Applications.	6 Hours
Practical Component 1. Perform Compatibility and Usability Testing on a web or mobile application. 2. Conduct Security Testing and document identified vulnerabilities. 3. Perform Load, Stress, and Volume Testing using suitable testing tools. 4. Execute test cases, record defects, and prepare a Bug Life Cycle report.	6 Hours
TEST AUTOMATION AND TOOLS Automated Software Testing, Automate Testing of Web Applications, Selenium: Introducing Web Driver and Web Elements, Locating Web Elements, Actions on Web Elements, Different Web Drivers, Understanding Web Driver Events, Testing: Understanding Testing.xml, Adding Classes, Packages, Methods to Test, Test Reports.	6 Hours
Practical Component 1. Configure Selenium WebDriver and automate basic browser operations. 2. Automate form validation and navigation test cases using Selenium. 3. Develop and execute TestNG test suites and generate automated test reports. 4. Automate end-to-end testing of a web application and generate execution reports.	6 Hours

		1	0	4	0	3
PE		SDG		9		

Pre-requisite courses	NA	Data Book / Codes / Standards (If any)	NA
------------------------------	-----------	--	-----------

Course Objectives:		The purpose of taking this course is to:
1	To apply DevOps concepts, Linux, and networking fundamentals to create and manage system environments effectively.	
2	Apply version control and continuous integration techniques to streamline development workflows	
3	Implement containerization and orchestration using Docker and Kubernetes	
4	Automate configuration management and infrastructure deployment using Ansible and Terraform.	
5	Integrate end-to-end DevOps toolchains for efficient deployment and monitoring in real-world projects.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply foundational DevOps concepts, Linux, and networking essentials to create and manage system environments effectively.		Ap
CO 2	Implement version control using Git and develop CI/CD pipelines with Jenkins to automate build and deployment processes		Ap
CO 3	Design and deploy containerized applications using Docker and manage orchestration through Kubernetes clusters.		An
CO 4	Automate configuration and infrastructure provisioning using Ansible and Terraform to ensure scalability and reproducibility.		Ap
CO5	Integrate multiple DevOps tools into a cohesive workflow to deliver reliable, continuous, and monitored software solutions.		An

DEVOPS INTEGRATION AND MONITORING	3 Hours
- Integrating CI/CD with Docker, Kubernetes, Ansible, Terraform - Deployment strategies: blue-green, rolling - Monitoring: Prometheus, Grafana - Logging, security practices Practical Component 1. Integrate Git, Jenkins, and Docker to implement a Continuous Integration workflow. 2. Implement Continuous Deployment using Docker, Kubernetes, and Jenkins. 3. Configure Prometheus and Grafana to monitor application and infrastructure performance. 4. Develop and demonstrate an end-to-end DevOps pipeline integrating Git, Jenkins, Docker, Kubernetes, Ansible, Terraform, and monitoring tools.	12 hours

24CSC006	SOFTWARE PROJECT MANAGEMENT (Common to CS, IT, AD)	L	T	P	J	C
		2	0	2	0	3
PE		SDG		9		

Pre-requisite courses	24CSI015 Software Engineering and Agile Practices	Data Book / Codes / Standards (If any)	NA
------------------------------	--	---	-----------

Course Objectives:	The purpose of taking this course is to:
1	Explore software project management principles and Agile project execution practices.
2	Apply estimation, planning, scheduling, and collaboration techniques for software projects.
3	Analyze project risks, software quality assurance practices, and AI-assisted workflow management strategies.
4	Utilize Agile and project management tools for monitoring and team coordination.
5	Develop practical skills in managing software projects using modern collaborative and AI-supported approaches.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO1	Analyse software project management principles, Agile lifecycles, AI-assisted collaborative workflows, and project communication practices in software industries.	An
CO2	Apply project planning, estimation, scheduling, and resource management techniques using collaborative project management platforms.	Ap
CO3	Develop Agile requirements, sprint plans, and workflow strategies using AI-assisted project coordination and documentation tools.	Ap
CO4	Apply risk management, software quality assurance, version control, and software delivery practices in project execution environments.	Ap
CO5	Evaluate software project performance using Agile metrics, dashboards, project monitoring strategies, and retrospective practices.	E

Course Content	
SOFTWARE PROJECT MANAGEMENT FUNDAMENTALS Characteristics of software projects - Responsibilities of software project managers - Traditional vs Agile project lifecycles - Stakeholders and team organization - Project scope and feasibility analysis - Project communication workflows - Introduction to AI-assisted collaborative project environments. Practical Component 1. Identify project goals, stakeholders, and scope for a simple software application. 2. Prepare a Project Charter using Notion AI. 3. Conduct Technical, Economic, and Operational Feasibility Analysis and prepare a feasibility report. 4. Generate a Software Requirement Summary and Requirement Specification document using Notion AI.	6 Hours 6 Hours
PROJECT PLANNING, ESTIMATION AND SCHEDULING Project planning activities - Work Breakdown Structure (WBS) - Resource allocation and team coordination - Cost and effort estimation techniques - Function point analysis - COCOMO model - Project scheduling - Gantt charts - PERT and CPM - Milestones, deliverables, and task dependencies. Practical Component 1. Develop a Work Breakdown Structure (WBS) for the selected software project 2. Create a Gantt Chart showing project activities, dependencies, and milestones. 3. Perform effort and cost estimation for the software project using suitable estimation techniques. 4. Create a project schedule in Jira by defining tasks, timelines, priorities, and resource assignments.	6 Hours 6 Hours
AGILE PROJECT MANAGEMENT AND ITERATION PLANNING Agile manifesto and Scrum framework - Scrum roles, events, and artifacts - Kanban methodology - Product backlog and sprint backlog management - User stories and acceptance criteria - Sprint planning, review, and retrospectives - AI-assisted requirement generation and collaborative reporting workflows - Iterative development and release planning. Practical Component 1. Develop Epics, User Stories, and Acceptance Criteria for the selected software project. 2. Create a Product Backlog and Sprint Backlog using Jira. 3. Configure a Sprint Board in Jira by organizing user stories, assigning tasks, and estimating story points. 4. Generate Sprint Review and Sprint Retrospective reports for a given project scenario using Notion AI.	6 Hours 6 Hours
RISK MANAGEMENT AND SOFTWARE DELIVERY Software risks and challenges - Risk identification and mitigation strategies - AI-assisted risk prediction and issue analysis - Issue tracking and change management - Software quality assurance practices - Defect tracking - Version control and collaborative repositories. Practical Component 1. Identify project risks and prepare a Risk Register. 2. Develop Risk Mitigation and Contingency Plans using Notion AI. 3. Create and manage issue tickets, bug reports, labels, and workflows using GitHub Projects. 4. Configure Jira dashboards and generate project progress reports using sample project data.	6 Hours 6 Hours

CYBER SECURITY AND BLOCKCHAIN

24CSC007	SECURE SOFTWARE DEVELOPMENT (Common to CS, IT, AD)	L	T	P	J	C
PE		2	0	2	0	3
		SDG		4,9		
Pre-requisite courses	24CSI015 Software Engineering and Agile Practices	Data Book / Codes / Standards (If any)			NA	

Course Objectives:	The purpose of taking this course is to:
1	To know the importance and need for software security
2	To learn about secure software design
3	To understand risk management in secure software development
4	To know the working of tools related to software security

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Demonstrate memory-based vulnerabilities by simulating attacks and applying mitigation techniques	Ap
CO 2	Design secure software components by integrating security principles into the SDLC and documenting threat models.	Ap
CO 3	Evaluate risks in a software project using profiling tools and propose mitigation strategies aligned with industry standards.	An
CO 4	Test software for security flaws using penetration testing tools and generate reports.	Ap
CO 5	Implement a secured web application by applying security frameworks and justifying design choices.	Ap

Course Content		
NEED OF SOFTWARE SECURITY AND LOW-LEVEL ATTACKS	6 Hours	
Introduction - Software Assurance and Software Security –Threats to software security - Sources of software insecurity - Benefits of Detecting Software Security - Properties of Secure Software – Secure SDLC- Memory-Based Attacks: Low-Level Attacks Against Heap and Stack - Defense Against Memory-Based Attacks	4 Hours	
Practical Component 1. Studying and Installing Kali Linux		
SECURE SOFTWARE DESIGN	7 Hours	
Requirements Engineering for secure software - SQUARE process Model – Requirements elicitation and prioritization- Isolating The Effects of Untrusted Executable Content – Stack Inspection – Policy Specification Languages – Vulnerability Trends – Buffer Overflow – Code Injection - Session Hijacking. Secure Design - Threat Modeling and Security Design Principles		
Practical Component 1. Implementation of the Buffer Overflow attack 2. Implementation of the SQL injection attack 3. Implementation of Cross Site Scripting and Prevention of XSS	6 Hours	
SECURITY RISK MANAGEMENT	5 Hours	
Risk Management Life Cycle – Risk Profiling – Risk Exposure Factors – Risk Evaluation and Mitigation – Risk Assessment Techniques – Threat and Vulnerability Management	4 Hours	
Practical Component 1. Basic risk profiling and assessment of a known software vulnerability		
SECURITY TESTING	8 Hours	
Traditional Software Testing – Comparison - Risk Based Security Testing – Prioritizing Security Testing With Threat Modeling – Penetration Testing – Planning and Scoping - Enumeration – Remote Exploitation – Web Application Exploitation - Exploits and Client Side Attacks – Post Exploitation – Bypassing Firewalls and Avoiding Detection - Tools for Penetration Testing	8 Hours	
Practical Component 1. Penetration testing on a web application to gather information about the system 2. Initiate XSS and SQL injection attacks using tools like Kali Linux 3. Developing and testing the secure test cases		
SECURE PROJECT MANAGEMENT	4 Hours	
Governance and security - Adopting an enterprise software security framework - Security and project management - Maturity of Practice	8 Hours	
Practical Component 1. Implementation of secured web application

		2	0	2	0	3
PE		SDG		4,9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	NA
------------------------------	--	---	----

Course Objectives:		The purpose of taking this course is to:
1	Learn the systematic approach to digital investigations, encompassing identification, preservation, analysis, and reporting of digital evidence.	
2	Acquire skills to collect, preserve, and analyze digital evidence from various devices and platforms, ensuring the integrity and admissibility of the evidence.	
3	Gain hands-on experience with industry-standard forensic tools and software used for data recovery, analysis, and reporting.	
4	Develop the ability to document findings clearly and concisely, creating reports suitable for legal proceedings and organizational reviews.	

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Illustrate the digital forensics process and digital evidence acquisition	Ap
CO 2	Explain file systems and data recovery procedures.	Ap
CO 3	Demonstrate computer, network and mobile forensics with specialized tools.	Ap
CO 4	Analyze malware and report the relevant incident.	Ap
CO 5	Utilize the forensics toolkit for efficient investigation and understand the legal aspects of digital forensics.	Ap

		2	0	2	0	3
PE		SDG		4,9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	NA
------------------------------	--	--	-----------

Course Objectives:		The purpose of taking this course is to:
1	Understand fundamental concepts of network security, including threats, vulnerabilities, and countermeasures.	
2	Explore the architecture and functionality of firewalls, VPNs, IDS/IPS, and other network security components	
3	Configure and manage firewalls to control traffic flow and enforce network security policies.	
4	Administer secure network services and monitor network activity to detect and respond to security incidents.	
5	Evaluate network security risks and design security solutions to meet organizational requirements.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply the symmetric cryptographic concepts and block cipher techniques for secure data transmission.		Ap
CO 2	Examine the public key cryptography and hash algorithms to enhance data security.		Ap
CO 3	Implement secure communication protocols to organize and safeguard payloads at the internet and transport layers.		Ap
CO 4	Interpret the primary components of a Three-Tier Architecture and explain how they work together in a firewall environment.		Ap
CO 5	Demonstrate the application of firewall rules to secure communication and manage traffic routing.		Ap
CO 6	Analyse network and system security from an administrative perspective to identify and mitigate cyber threats.		An

Course Content	
NETWORK SECURITY BASICS Overview of Network Security, Internet Standards and RFCs, Conventional Encryption Principles and block ciphers, Advanced Encryption standards, AES Implementation, Block Cipher operation: cipher block modes of operation, location of encryption devices. Practical Component 1. Implementation of Advanced Encryption Standard (AES) algorithm 2. Designing of a secure network and identify optimal encryption device placement.	6 Hours 6 Hours
ASYMMETRIC CIPHERS AND DATA INTEGRITY ALGORITHM Public key cryptography, RSA Algorithm, Diffie Hellman Key Exchange, Elgamal Cryptographic System, Elliptic Curve Cryptography, Pseudorandom number generation, Cryptographic Hash Functions: Requirements and Secure Hash algorithm (SHA), Message Authentication Codes: HMAC, Key Management and Distribution. Practical Component 1. Implementation of RSA algorithm 2. Implementation of secure hash algorithm.	6 Hours 6 Hours
INTERNET SECURITY Transport Layer Security: Web security considerations, HTTPS, secure shell (SSH), Email privacy: Good Privacy (PGP) and S/MIME. IP Security Overview, IP Security Architecture, Authentication Header, Encapsulating Security Payload, Combining Security Associations and Key Management. Practical Component 1. Analysing of FTP, Telnet and HTTP packets using wireshark 2. Implementation of Image Sniffing using Wireshark.	6 Hours 6 Hours
NETWORK SECURITY MANAGEMENT Deploying Smart Console - Security Management Server - Security Gateway - Configuring Objects in Smart Console-Establishing Secure Internal Communication - Managing Administrator Access - Managing Licenses - Creating a Security Policy - Configuring Order Layers. Practical Component 1. Configuring objects in smart console 2. Managing administrator access for an operating system 3. Elevating Security with Autonomous Threat Prevention	6 Hours 6 Hours
NETWORK SECURITY CONFIGURATION Configuring a Shared Inline Layer - Configuring NAT - Integrating Security with a Unified Policy - Elevating Security with Autonomous -Threat Prevention - Configuring a Locally Managed Site-to-Site VPN - Elevating Traffic View - Monitoring System States - Maintaining the Security Environment. Practical Component 1. Configuring NAT to use a private IP address 2. Creating a security policy and integrating it with a unified policy 3. Monitoring System States and Maintaining the Security Environment.	6 Hours 6 Hours

24CSC010	ETHICAL HACKING AND CYBER LAWS (Common to CS, IT, AD)	L	T	P	J	C
		2	0	2	0	3
PE		SDG		4,9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	NA
------------------------------	--	--	----

Course Objectives:		The purpose of taking this course is to:
1	Introduce core concepts of ethical hacking, including threats, vulnerabilities, and attack methodologies.	
2	Develop skills in reconnaissance, footprinting, and enumeration using ethical hacking tools.	
3	Simulate real-world attacks such as password cracking, sniffing, and wireless exploitation.	
4	Provide knowledge of cyber laws, ethical practices, and digital rights frameworks.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Identify and describe the key concepts and terminologies of ethical hacking, including phases of hacking, threat types, vulnerabilities, and exploits		U
CO 2	Demonstrate the use of reconnaissance tools for footprinting and port scanning, and script-based enumeration of Windows and Linux systems,		Ap
CO 3	Apply password cracking techniques, implement keyloggers and sniffers, and analyze remote system vulnerabilities to simulate system hacking attacks		An
CO 4	Execute wireless network attacks and demonstrate secure configuration practices using wireless hacking tools,		Ap
CO 5	Analyze the key provisions of national and international cyber laws, evaluate ethical implications of cyber actions, and apply legal frameworks to real-world case studies		Ap

Course Content	
FUNDAMENTALS OF WEB APPLICATION SECURITY The history of Software Security-Recognizing Web Application Security Threats, Web Application Security, Authentication and Authorization, Secure Socket layer, Transport layer Security, Session Management-Input Validation.	8 Hours
BROWSER SECURITY PRINCIPLES AND WEB APPLICATION VULNERABILITIES Origin Policy - Exceptions to the Same-Origin Policy - Cross-Site Scripting and Cross-Site Request Forgery - Reflected XSS - HTML Injection. Understanding vulnerabilities in traditional client server application and web applications, client state manipulation, cookie-based attacks, SQL injection, cross domain attack (XSS/XSRF/XSSI) http header injection. SSL vulnerabilities and testing - Proper encryption use in web application - Session vulnerabilities and testing - Cross-site request forgery	9 Hours
VULNERABILITY ASSESSMENT AND PENETRATION TESTING Vulnerability Assessment Lifecycle, Vulnerability Assessment Tools: Cloud-based vulnerability scanners, Host-based vulnerability scanners, Network-based vulnerability scanners, Database based vulnerability scanners, Types of Penetration Tests: External Testing, Web Application Testing, Internal Penetration Testing, SSID or Wireless Testing, Mobile Application Testing.	9 Hours
SECURE WEB DESIGN Secure website design: Architecture and Design Issues for Web Applications, Deployment Considerations Input Validation, Authentication, Authorization, Configuration Management, Sensitive Data, Session Management, Cryptography, Parameter Manipulation, Exception Management, Auditing and Logging, Design Guidelines, Forms and validity, technical implementation.	9 Hours
HACKING TECHNIQUES AND TOOLS Social Engineering, Injection, Cross-Site Scripting (XSS), Broken Authentication and Session Management, Cross-Site Request Forgery, Security Misconfiguration, Insecure Cryptographic Storage, Failure to Restrict URL Access, Tools: Comodo, OpenVAS, Nexpose, Nikto, Burp Suite, etc. probing, Double hashing and rehashing, Hashing Applications. Memory Management: Garbage Collection.	9 Hours

Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	0	Project Hours:	0	Total Hours:	45

24CSE012	DATABASE SECURITY (Common to CS, IT, AD)	L	T	P	J	C
		3	0	0	0	3
PE		SDG		4,9		

Pre-requisite courses	24CSI207 Database Management System	Data Book / Codes / Standards (If any)	-
------------------------------	--	--	----------

Course Objectives:	
1	To understand the principles, policies, models, and mechanisms of access control and database security.
2	To apply role-based access control models, security techniques, and tools to mitigate database vulnerabilities and attacks.
3	To explore current and emerging trends in database security and implement practical solutions for access control in evolving digital environments.

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Explain fundamental concepts of database security including threats, vulnerabilities, and basic security models		U
CO 2	Analyze and compare access control mechanisms (DAC, MAC, RBAC) and their limitations through policy enforcement.		An
CO 3	Apply various security models in enterprise IT infrastructure scenarios		Ap
CO 4	Apply Virtual Private Database techniques and SQL injection countermeasures to enhance database security.		Ap
CO 5	Apply emerging trends in database security to implement suitable access control solutions in practical scenarios.		Ap

Course Content	
FOUNDATIONS OF DATABASE SECURITY Database security – Introduction includes threats, vulnerabilities and breaches, Basics of database design, DB security – concepts, approaches and challenges,	7 Hours
ACCESS CONTROL AND POLICY ENFORCEMENT Introduction to Access Control, Purpose and fundamentals of access control, brief history, Policies of Access Control, Models of Access Control, and Mechanisms, Discretionary Access Control (DAC), Non- Discretionary Access Control, Mandatory Access Control (MAC). Capabilities and Limitations of Access Control Mechanisms: Access Control List (ACL) and Limitations, Capability List and Limitations.	10 Hours
SECURITY MODELS Biba's integrity model, Clark-Wilson model, Domain type enforcement model, mapping the enterprise view to the system view, Role hierarchies- inheritance schemes, hierarchy structures and inheritance forms, using SoD in real system Temporal Constraints in RBAC, MAC AND DAC. Integrating RBAC with enterprise IT infrastructure: RBAC for WFMSs, RBAC for UNIX and JAVA environments Case study: Multi-line Insurance Company	9 Hours
VIRTUAL PRIVATE DATABASE AND SQL INJECTION Necessity of VPD –implementing VPD- Problems of VPD -. Launch SQL injection attacks – Countermeasures-, Security Re-engineering for Databases: Concepts and Techniques, Database Watermarking – Basic Watermarking Process - Discrete Data, Multimedia, and Relational Data – Attacks on Watermarking - Single Bit Watermarking, Multi bit Watermarking	10 Hours
FUTURE TRENDS IN DATABASE SECURITY A Bayesian Perspective, Privacy-enhanced Location based Access Control, Efficiently Enforcing the Security and Privacy Policies in a Mobile Environment	9 Hours

24CSC021	DIGITAL EVIDENCE AND CYBER INVESTIGATION (Common to CS, IT, AD)	L	T	P	J	C
		1	0	4	0	3
PE		SDG		4,9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	NA
------------------------------	--	--	----

Course Objectives**:		The purpose of taking this course is to:
1	Gain knowledge on digital investigation lifecycle, emphasizing evidence handling, documentation and use of forensic methodologies for identifying and analyzing digital incidents	
2	Impart practical skills in forensic data acquisition, imaging, and verification from diverse storage media and file systems while maintaining evidence integrity	
3	Ability to extract, analyze, and interpret operating system artifacts from Windows and Linux environments for reconstructing user activities and identifying system misuse	
4	Enable students to perform malware analysis through static and dynamic techniques, identify Indicators of Compromise (IOCs), and document forensic findings effectively	
5	Develop proficiency in reverse engineering tools, disassembly, and threat intelligence to classify and counteract malware	

Course Outcomes***:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply forensic methodologies to perform a basic digital investigation on a simulated crime scene	Ap
CO 2	Construct a forensic report summarizing acquired data, integrity verification and recovery process	Ap
CO 3	Examine an automated script or workflow for extraction and correlation of operating system artifacts	Ap
CO 4	Analyze network traffic patterns to identify intrusion attempts, data exfiltration or malware communication	Ap
CO 5	Analyze malware behavior by monitoring system, file and network activities during execution	Ap

24CSE023	BLOCKCHAIN TECHNOLOGY (Common to CS, IT, AD)	L	T	P	J	C
		3	0	0	0	3
PE		SDG		9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	Nil
------------------------------	--	--	-----

Course Objectives:		The purpose of taking this course is to:
1	Introduce the fundamental principles of blockchain systems and the cryptographic techniques that enable secure decentralized computing.	
2	Explain the structure, components, and functioning of blockchain networks including blocks, transactions, and consensus mechanisms.	
3	Expose students to a variety of blockchain applications across sectors like finance, healthcare, governance, and supply chain.	
4	Develop an understanding of blockchain-related security challenges, privacy mechanisms, and regulatory considerations.	
5	Familiarize students with recent innovations, scalability solutions, and future trends in blockchain and decentralized technologies.	

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Illustrate the foundational elements of blockchain and cryptographic techniques to demonstrate how decentralized systems maintain trust.	Ap
CO 2	Apply the structural components of blockchain architecture and transaction flow to organize how data is validated and stored securely.	Ap
CO 3	Analyze blockchain applications across various domains to distinguish the suitability of blockchain features for specific sector needs.	An
CO 4	Analyze common blockchain security threats and privacy measures to interpret how system vulnerabilities can be identified and addressed.	An
CO 5	Apply emerging blockchain trends and governance models to illustrate how evolving mechanisms influence decentralized innovation.	Ap

Course Content	
Blockchain Fundamentals and Cryptographic Building Blocks Introduction to Distributed Systems and Blockchain Evolution - Principles of Cryptography for Blockchain: Hash Functions, Merkle Trees, Digital Signatures - Public Key Infrastructure in Blockchain - Blockchain Classifications: Public, Private, Consortium, Hybrid - Blockchain Trilemma: Scalability, Security, Decentralization - Consensus Mechanisms Overview: PoW, PoS, and Variants - Case Study: Blockchain vs Traditional Distributed Databases	9 Hours
Blockchain Architecture and Transaction Processing Structure of a Block: Block Header, Block Body - Anatomy of a Blockchain Network: Nodes, Miners, Validators - Transaction Lifecycle: Creation, Propagation, Validation, Finality - Blockchain Forks and Chain Reorganizations - Incentives, Gas Mechanisms, and Fees in Public Blockchains - Smart Contracts: Concept and Deployment Cycle - Case Study: Comparing Bitcoin and Ethereum Architectures	9 Hours
Blockchain Applications in Industry Sectors Blockchain in Finance: Cryptocurrencies, DeFi Basics, CBDCs - Blockchain in Healthcare: Health Records, Interoperability, Privacy - Blockchain in Governance: Digital Identity Systems, Land Registries, E-Voting - Blockchain in Supply Chain: Provenance Tracking, Logistics Management - Blockchain for IoT Integration: Secure Data Sharing and Automation - Challenges in Blockchain Adoption: Energy Efficiency, Legal Frameworks - Case Study: Blockchain-based E-Governance Initiatives (India and Global)	9 Hours
Blockchain Security, Privacy, and Challenges Common Threats: Sybil Attack, 51% Attack, Replay Attack - Privacy Enhancements: Zero-Knowledge Proofs, Mixers - Identity Management and Access Control - Regulatory Landscape: GDPR, Data Sovereignty in Blockchain - Blockchain Interoperability Solutions: Cross-Chain Bridges, Sidechains - Emerging Threats and Security Trends in Multi-chain Ecosystems - Case Study: Security Audit of a Public Smart Contract	9 Hours
Future Trends and Innovations in Blockchain Layer 2 Scaling Techniques: Optimistic Rollups, ZkRollups, State Channels - Decentralized Autonomous Organizations (DAOs) and Governance Models - Tokenization and NFTs: Standards and Applications Blockchain in Metaverse, Digital Assets, and Web3	9 Hours

		3	0	0	0	3
PE		SDG		9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	
------------------------------	--	---	--

Course Objectives:		The purpose of taking this course is to:
1	Understand the origin, architecture, and cryptographic foundations of Bitcoin and its blockchain system.	
2	Develop the ability to construct and validate Bitcoin transactions using blockchain data structures and scripting mechanisms.	
3	Apply cryptocurrency trading concepts and strategies to simulate dynamic market environments and assess performance using market indicators.	
4	Evaluate the economic, legal, and regulatory implications of cryptocurrencies and explore the future potential of altcoins and blockchain innovations.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Illustrate Bitcoin principles and cryptographic foundations to demonstrate secure transaction validation.		Ap
CO 2	Apply Bitcoin network and wallet structures to organize transaction flow and privacy techniques.		Ap
CO 3	Analyze trading models and market behavior to interpret pricing trends and strategy outcomes.		An
CO 4	Analyze economic and legal aspects of cryptocurrency to examine their influence on adoption and compliance.		An
CO 5	Apply concepts of altcoins and consensus methods to illustrate improvements in blockchain performance.		Ap

Course Content	
FUNDAMENTALS OF BITCOIN AND CRYPTOGRAPHY Origin and evolution of Bitcoin - Blockchain structure and Proof-of-Work consensus - Cryptographic techniques: Hashing, Digital Signatures, Merkle Trees - Bitcoin mining: Mining pools and incentives - Bitcoin scripting language and transaction verification - Case Study: Genesis Block and Satoshi Nakamoto's Whitepaper	9 Hours
BITCOIN ECOSYSTEM AND WALLETS Bitcoin network architecture: Nodes, wallets, mempool - Types of wallets: Hot vs Cold, Hardware wallets, Hierarchical Deterministic wallets - Bitcoin transactions and UTXO model - SegWit, Lightning Network, and scalability - improvements - Privacy techniques: CoinJoin, Mixing services - Case Study: Real-world Bitcoin transaction tracing	9 Hours
CRYPTOCURRENCY TRADING AND MARKET DYNAMICS Crypto trading concepts: Order types, Exchanges, Order Books - Centralized vs Decentralized Exchanges (CEX vs DEX) - Trading strategies: Spot, Margin, Arbitrage, HODLing - Stablecoins and algorithmic currencies - Market indicators and volatility analysis - Case Study: Historical Bitcoin price fluctuations and crashes	9 Hours
ECONOMIC, LEGAL, AND REGULATORY ASPECTS Cryptocurrency and global financial systems - Merits and demerits of cryptocurrency adoption - Regulatory frameworks across the globe (USA, EU, India) - Taxation and anti-money laundering (AML) concerns - Legal status of Bitcoin: Security or commodity? - Case Study: FTX, Mt. Gox, and Terra - UNA collapses	9 Hours
ALTERNATIVE CRYPTOCURRENCIES AND FUTURE TRENDS Overview of altcoins: Ethereum, Litecoin, Monero, Ripple - Crypto forks: Hard vs Soft - Proof-of-Stake and energy-efficient consensus - DAOs, DeFi, and NFTs - Case Study: Bitcoin vs Ethereum vs New-gen coins	9 Hours

		3	0	0	0	3
PE		SDG		9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	
------------------------------	--	---	--

Course Objectives:	The purpose of taking this course is to:
1	Understand the architecture, principles, and evolution of decentralized finance (DeFi).
2	Develop skills to use decentralized exchange protocols and liquidity mechanisms.
3	Learn lending, borrowing, and stablecoin models within DeFi ecosystems.
4	Evaluate advanced DeFi strategies like flash loans, staking, and yield farming.
5	Explore scalability solutions and innovations shaping the future of decentralized finance.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply DeFi fundamentals and ecosystem components to illustrate how decentralized alternatives operate.	Ap
CO 2	Apply DEX architectures and liquidity models to demonstrate decentralized trading mechanisms.	Ap
CO 3	Analyze lending systems and stablecoin designs to interpret risk factors and use cases in DeFi finance.	An
CO 4	Analyze advanced DeFi strategies and risk models to examine vulnerabilities and compliance issues.	An
CO 5	Apply emerging DeFi technologies and adoption trends to demonstrate their influence on future digital finance.	Ap

Course Content	
INTRODUCTION TO DECENTRALIZED FINANCE Traditional Finance vs. Decentralized Finance (DeFi) - Evolution and Growth of DeFi Ecosystem - Key DeFi Components: DEXs, Lending, Borrowing, Yield Farming - Role of Smart Contracts in DeFi - Blockchain Networks for DeFi: Ethereum, Binance Smart Chain, Solana – Virtual Economy -Tokenomics – Virtual Assets and ownerships - Governance in DeFi - DAO - Case Study: Evolution of Uniswap and Compound	9 Hours
DECENTRALIZED EXCHANGES (DEXS) AND LIQUIDITY Automated Market Makers (AMMs) and Order Book DEXs - Uniswap, SushiSwap, and Curve Finance Mechanisms - Liquidity Pools and Automated Market Makers (AMMs) - Slippage and Transaction Costs - Cross-Chain Swaps and Interoperability - Case Study: Comparing Uniswap v2 vs. Uniswap v3	9 Hours
LENDING, BORROWING, AND STABLECOINS Cross-Border Payments Using Blockchain and Its Benefits, Study of blockchain platforms used for cross-border payments, Impact of Blockchain on Banking Services - Peer-to-Peer and Overcollateralized Lending -Interest Rate Models in DeFi – stable coins – Uses – types-Algorithmic and Asset-Backed Stablecoins - Flash Loans and Arbitrage Opportunities -Risks in DeFi Lending: Liquidation,	9 Hours
ADVANCED DEFI APPLICATIONS AND RISKS Yield Farming and Liquidity Mining - Flash Loans and Arbitrage Strategies - Synthetic Assets and Derivatives in DeFi - Risks: Smart Contract Vulnerabilities, Rug Pulls, Regulatory Uncertainty - Compliance and Regulatory Perspectives on DeFi - Case Study: Analysis of Yearn Finance and Flash Loan Attacks	9 Hours
FUTURE OF DEFI AND EMERGING TRENDS Layer-2 Scaling Solutions for DeFi - Institutional Adoption of DeFi - Cross-Chain DeFi Protocols - AI and DeFi Integration for Automated Trading - CBDCs and the Future of Digital Finance	9 Hours

24CSC015	SMART CONTRACT DEVELOPMENT (Common to CS, IT, AD)	L	T	P	J	C
		2	0	2	0	3
PE		SDG		9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	
------------------------------	--	---	--

Course Objectives:	The purpose of taking this course is to:
1	Learn to develop decentralized applications (dApps) using Solidity.
2	Design scalable and reusable smart contract components.
3	Implement smart contract interactions for interoperable decentralized systems.
4	Identify and mitigate smart contract vulnerabilities through security best practices.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply Solidity basics and gas concepts to build simple Ethereum smart contracts.	Ap
CO 2	Apply design patterns and modularity to create structured and reusable contracts.	Ap
CO 3	Analyze contract interactions and events to differentiate decentralized behaviors.	An
CO 4	Evaluate smart contract security practices and application use cases to justify robustness and correctness.	E

<u>Course Content</u>	
ETHEREUM BLOCKCHAIN AND SMART CONTRACT BASICS Overview of Ethereum architecture: EOA, Contract Accounts, EVM - Transactions, gas mechanics, and ABI - Solidity basics: data types, functions, visibility, modifiers, payable - Deployment workflows using Hardhat or Remix	7 Hours
Practical Component Set up Ethereum development environment (Hardhat, MetaMask, testnet faucet) and deploy a basic Solidity contract with state variables, public and payable functions.	6 hours
SMART CONTRACT MODULARITY AND DESIGN PATTERNS Common design patterns: Factory, Singleton, Proxy, Pull-over-Push - Role-Based Access Control: Ownable, Pausable - Contract inheritance and interface-based modularity - OpenZeppelin and upgradeable contract strategies	7 Hours
Practical Component Create modular smart contracts using inheritance, interfaces, and OpenZeppelin (Ownable, Pausable) Implement and test factory and proxy patterns to demonstrate contract modularity and upgradeability.	6 hours
CONTRACT INTERACTIONS AND DECENTRALIZED SYSTEMS Contract communication: delegatecall, call, staticcall - Event-driven architecture using logs - Working with arrays, mappings, structs, storage/memory - Interfacing with oracles, cross-contract coordination.	8 Hours
Practical Component Simulate contract-to-contract interactions using delegatecall and log relevant events. Develop contracts that use arrays, mappings, structs and demonstrate memory vs storage usage.	8 hours
SMART CONTRACT SECURITY AND REAL-WORLD APPLICATIONS Common vulnerabilities: reentrancy, overflow, DoS, front-running - Secure development practices and static analysis tools (Slither, MythX) - Smart contracts in DAOs: voting mechanisms, governance - Smart contracts in DeFi: lending, flash loans, token streaming	8 Hours
Practical Component Detect common vulnerabilities in smart contracts using Slither and MythX. Build a simple DAO voting mechanism with role-based control and events. Write and test a basic DeFi lending contract including interest logic and edge case checks. Simulate a flash loan and demonstrate secure logic using mock tokens.	10 hours

		2	0	0	2	3
PE		SDG		9		

Pre-requisite courses	24CSI011 Computer Networks and Security	Data Book / Codes / Standards (If any)	
------------------------------	--	---	--

Course Objectives:		The purpose of taking this course is to:
1	Equip students with the foundational knowledge of Web3 tools, protocols, and decentralized identity systems.	
2	Develop skills to design and integrate smart contracts with frontend frameworks like React.js for decentralized apps (DApps).	
3	Enable hands-on experience with decentralized storage, blockchain data indexing, and backend integration using GraphQL and IPFS.	
4	Design full-stack DApps by integrating authentication and decentralized identity to construct deployable applications with event monitoring.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply Web3 principles and essential tools to demonstrate the setup of a fundamental blockchain development environment.		Ap
CO 2	Apply the concepts of decentralized application frontend creation to demonstrate the preparation of interactive user interfaces that connect with smart contracts.		Ap
CO 3	Analyze various backend and storage integration methods to select appropriate decentralized solutions for specific application requirements.		An

Course Content	
WEB3 FUNDAMENTALS AND TOOLING Evolution of Web1, Web2, Web3 – Decentralization principles – Wallets and identity – JSON-RPC and provider models – Setting up Node.js, Web3.js, Ethers.js, and IPFS. Practical Component Setup Full Development Environment – Node.js, Hardhat, React.js/Next.js, MetaMask	8 Hours 4 Hours
FRONTEND FRAMEWORKS FOR DAPPS Smart Contract Creation, Front-End Creation, Connecting Smart Contract with Front-End Application -React.js basics for DApp UI – State management in DApps – Connecting to wallets. Practical Component Deploy a Basic Smart Contract Locally – Hardhat, Ethers.js - Integrate Wallet Connection in Frontend – Wagmi, RainbowKit, MetaMask	8 Hours 6Hours
BACKEND AND STORAGE INTEGRATION Using IPFS and Filecoin for decentralized storage – Pinning services – Web3 storage SDKs – GraphQL with The Graph – Data indexing and querying from smart contracts. Practical Component Upload and Retrieve Files from IPFS – Web3.Storage, Pinata - Query Blockchain Events via Indexing – The Graph Protocol, GraphQL	7 Hours 6 Hours
FULL-STACK DAPP DEVELOPMENT Authentication via Sign-In with Ethereum – Decentralized Identity (DID) - Building full-stack DApp – Project structuring, deployment and testing Dapp - Working with testnets and Etherscan APIs Practical Component Integrative application of Experiments 1 to 5 in building a full-stack Dapp - Additional hands-on practice for DApp deployment, DID integration, and testnet verification using Etherscan APIs – Mini Project	9 Hours 8 Hours

Sample Mini Projects

1. NFT Marketplace: Mint, list, and buy NFTs with IPFS storage and on-chain metadata indexing.
2. Decentralized Voting Platform: Wallet-based authentication; cast votes; real-time results using the Graph.
3. Decentralized Blogging Platform: Authors upload posts to IPFS; frontend pulls posts dynamically.
4. Token Gated Community DApp: Access to content/features only if user holds specific tokens.
5. Crowdfunding DApp: Smart contract-based funding campaigns with milestone payments.

BASICS OF UNITY AND SCENE CREATION Introduction to Game Development-Overview of Unity-Understanding Unity Interface-Creating a New Project-Scene, Game, Hierarchy, and Inspector Windows-Adding and Managing Game Objects-Moving, Rotating, and Scaling Objects-Saving and Organizing Projects. Practical Component Create a Unity project, explore the Unity Editor interface, and organize project assets and scenes. Create and manipulate Game Objects using transformations to design a basic game environment.	6 Hours 6 Hours
C# SCRIPTING FOR GAME OBJECT MOVEMENT Introduction to C# in Unity-Variables and Data Types-Functions and Simple Scripts-Using If Statements and Loops-Adding Scripts to Game Objects-Using Debug Log and Console-KeyBoard Input Controls-Creating Simple Player Movement. Practical Component Develop basic C# scripts using variables, functions, conditional statements, and loops, and attach them to Game Objects. Implement keyboard input controls and create player movement functionality with debugging support.	6 Hours 6 Hours
PHYSICS OF MATERIALS AND COLLISION Introduction to 2D and 3D Games-Adding Shapes and Models-Using Materials and Colors-Basics of Lighting and Camera-Rigidbody and Collider Components-Detecting Collisions-Adding Simple Animations-Creating a Basic Game Scene. Practical Component Apply materials, colors, lighting, and camera settings to create an interactive 2D/3D game scene. Add Rigidbody and Collider components and implement collision detection and object interactions.	6 Hours 6 Hours
AUDIO INTEGRATION AND ANIMATION Adding Audio and Sound Effects-Creating Score and Timer System-Introduction to Unity UI-Creating Buttons and Text-Scene Switching-Creating Start and Game Over Screens-Simple Enemy and Collectible Objects-Building a Small Mini Game. Practical Component Integrate background music and sound effects triggered by gameplay events. Design UI elements such as score, timer, buttons, and implement scene transitions, start screens, and game-over screens.	6 Hours 6 Hours
GAME SCENE MANAGEMENT AND GAME BUILDING Planning a Simple Game-Designing Game Levels-Adding Gameplay Features-Testing and Fixing Errors-Improving Game Appearance-Exporting the Game-Final Project Presentation and Demo. Practical Component Develop gameplay features using enemies, collectibles, animations, and level progression mechanisms. Build, test, debug, and deploy a complete playable mini-game by integrating scripting, physics, UI, audio, animation, and scene management.	6 Hours 6 Hours
Sample Mini Projects Coin Collector Adventure Collect coins, avoid obstacles, and achieve the highest score within a time limit. Maze Escape Challenge Navigate through a maze, collect keys, and reach the exit before time runs out. Endless Runner Game	

Signature of BOS Chairman, IT

Control a character that runs continuously while avoiding obstacles and collecting rewards. Space Shooter Pilot a spaceship, destroy enemy objects, and survive as long as possible while increasing the score. Treasure Hunt Quest Explore a game environment, collect treasures, and complete objectives to win the game.

Blender Fundamentals and Asset Development Introduction to 3D Production Pipeline – Applications of 3D Graphics in Games, Animation, XR and Digital Media – Blender Interface and Workspace – Navigation Tools and Viewports – Object Mode and Edit Mode – Mesh Components: Vertices, Edges and Faces – Object Transformations – Primitive Objects – Scene Organization – Collection Management – Basic Mesh Editing Tools – Extrude, Inset, Bevel and Loop Cut – Introduction to Asset Creation Workflow.	6 Hours
Practical Component Create and organize a Blender project by exploring the interface, viewports, collections, object transformations, and scene management features. Develop basic 3D assets using primitive objects and mesh editing operations such as extrude, inset, bevel, and loop cut.	6 Hours
3D Modeling Techniques and Digital Sculpting Low Poly Modeling Concepts – Hard Surface Modeling – Organic Modeling Fundamentals – Modifiers: Mirror, Subdivision Surface, Solidify, Boolean and Array – Efficient Modeling Workflows – Digital Sculpting Basics – Sculpting Brushes and Tools – Retopology Concepts – Model Optimization Techniques – Preparing Models for Texturing.	6 Hours
Practical Component Create low-poly and hard-surface models using modifiers such as Mirror, Subdivision Surface, Solidify, Boolean, and Array. Develop organic models using sculpting tools and apply retopology and optimization techniques for efficient asset creation.	6 Hours
Materials, UV Mapping and Texturing Material Fundamentals – Shader Editor Basics – PBR Workflow Concepts – UV Mapping and UV Unwrapping – Texture Painting – Image Textures – Procedural Textures – Normal Maps and Roughness Maps – Material Optimization – Asset Texturing Pipeline.	6 Hours
Practical Component Apply materials and shaders using the Shader Editor and implement PBR-based workflows for 3D assets. Perform UV mapping, UV unwrapping, texture painting, and apply image or procedural textures to enhance model appearance.	6 Hours
Environment Design, Lighting and Rendering Environment Creation Workflow – Terrain and Landscape Creation – Asset Placement and Scene Composition – Cameras and Cinematic Views – Lighting Fundamentals – Three-Point Lighting – HDRI Lighting – Rendering using Eevee and Cycles – Render Settings and Optimization – Portfolio Image Generation.	6 Hours
Practical Component Design a 3D environment by creating landscapes, placing assets, and composing scenes using appropriate camera settings. Implement lighting techniques using Three-Point Lighting and HDRI environments, and generate optimized renders using Eevee and Cycles.	6 Hours
Animation, Rigging and Game Asset Pipeline Introduction to Rigging – Armatures and Bone Hierarchies – Weight Painting Basics – Object Animation – Keyframing Techniques – Timeline and Graph Editor – Camera Animation – Exporting Assets for Game Engines – Asset Optimization for Unity and Unreal Engine – Portfolio Preparation and Presentation.	6 Hours
Practical Component Create basic rigging structures using armatures, apply weight painting, and develop object	6 Hours

<u>Course Content</u>	
Introduction to Augmented Reality and Unity3D Basics Definition and types of Augmented Reality (AR) – Applications of AR in various domains – Comparison between AR, Virtual Reality (VR), and Mixed Reality (MR) – Overview of the AR development ecosystem: Unity3D and AR SDKs (AR Foundation, Vuforia) – Setting up Unity3D for AR development – Understanding Unity concepts: Game Objects, Scenes, and Prefabs – Basic C# scripting essentials for AR interactions.	6 Hours
Practical Component Create and configure a Unity3D project for AR development using AR Foundation or Vuforia, and explore Game Objects, Scenes, and Prefabs. Develop basic C# scripts to perform simple AR interactions and manage virtual objects within an AR scene.	6 Hours
Building First AR Experiences Introduction to AR Foundation– Configuring AR camera and AR session in Unity – Marker-based vs Marker-less AR tracking – Image tracking: Detecting and displaying 3D content with markers – Plane detection and anchors in AR environments.	6 Hours
Practical Component Configure AR Session and AR Camera, and implement marker-based AR by detecting image targets and displaying 3D content. Implement marker-less AR using plane detection and anchors, and develop a simple AR application integrating virtual objects into the real environment.	6 Hours
Interaction Design in AR Principles of AR interaction: gaze, tap, gesture – Implementing touch-based interactions: tap-to-place 3D objects – Object manipulation in AR: move, rotate, and scale – Designing and displaying world-space UI panels – Providing visual feedback: highlighting, animation, and effects.	6 Hours
Practical Component Develop touch-based AR interactions for placing virtual objects on detected surfaces. Implement object manipulation techniques such as move, rotate, and scale, and design world-space user interface elements with visual feedback.	6 Hours
Advanced AR Features and Enhancements Environmental understanding and light estimation – Basics of face tracking: applying masks and filters – AR-based navigation and wayfinding – Integrating audio and particle effects into AR scenes – Performance optimization techniques for mobile AR (Android/iOS) – Introduction to AI-assisted AR applications including object recognition and smart interactions	6 Hours
Practical Component Integrate environmental understanding features including light estimation, audio effects, particle systems, and basic face-tracking functionality. Develop an AR mini-application incorporating navigation, object recognition concepts, or interactive AR gameplay features.	6 Hours
AR Project Development and Deployment Planning an AR application: from concept to prototype – User testing and UX considerations for AR apps – Building and deploying AR applications to Android/iOS devices – Debugging techniques and performance improvement strategies.	6 Hours
Practical Component Design and prototype an AR application by applying user experience principles, testing methodologies, and performance optimization techniques. Build, debug, optimize, and deploy a complete AR application to a mobile device and demonstrate its functionality.	6 Hours

Course Content	
Introduction to Virtual Reality and Unity3D Basics Definition and types of Virtual Reality (VR) – Comparison between VR, Augmented Reality (AR), and Mixed Reality (MR) – Introduction to immersive technologies and spatial computing concepts -Applications of VR across various domains such as gaming, education, and healthcare – Introduction to Unity3D for VR development – Setting up a VR project using XR Plugin Management – Understanding Unity concepts: Game Objects, Scenes, and Prefabs – Basic C# scripting essentials for VR interactions and immersive environments.	5 Hours
Practical Component Create and configure a Unity3D VR project using XR Plugin Management, and explore Game Objects, Scenes, Prefabs, and immersive environment setup. Develop basic C# scripts for VR interactions and create simple immersive environments with interactive virtual objects.	6 Hours
VR Hardware, Input Systems, and Player Setup Overview of VR hardware: Oculus Quest, HTC Vive, Pico – Understanding Head-Mounted Displays (HMDs) and VR controllers – Setting up XR Rig and player camera in Unity – Introduction to XR Interaction Toolkit – Handling basic input: gaze-based interactions and controller inputs – Mini project: Develop a basic VR scene with object interaction using gaze or controllers.	7 Hours
Practical Component Configure XR Rig, VR camera, and controller setup using XR Interaction Toolkit for VR application development. Implement gaze-based and controller-based interactions to enable user interaction with virtual objects in a VR scene.	6 Hours
Creating VR Interactions and User Interfaces Designing interactions in VR: teleportation, object grabbing, and manipulation – Implementing teleportation using teleportation areas and anchors – Physics-based interactions for grabbable objects (pick up, throw) – Creating VR-friendly user interfaces using world-space canvases and menus – Integrating basic haptic feedback – Mini project: Create a VR room with interactive objects and teleportation system.	6 Hours
Practical Component Develop teleportation-based navigation systems using teleportation areas and anchors within a virtual environment. Implement object grabbing, manipulation, haptic feedback, and world-space user interface elements for immersive interaction.	6 Hours
VR Environment Building and Optimization Building immersive environments with lighting, spatial audio, and realistic textures – Principles of comfort and safety in VR to reduce motion sickness – Scene optimization techniques: static batching, level of detail, and texture optimization – Using 360-degree images and videos for environment design – Adding particle effects and simple animations - Introduction to AI-assisted VR interactions and intelligent virtual environments - Mini project: Build a small exploration scene such as a museum or a virtual forest.	6 Hours
Practical Component Design immersive VR environments using lighting, spatial audio, textures, particle effects, animations, and 360-degree media. Apply optimization techniques and develop intelligent VR interactions to improve performance and user experience.	6 Hours
VR Application Development and Deployment Planning a VR application from idea to prototype – Testing and debugging VR experiences – Building for standalone and PC-based VR platforms – Deployment	6 Hours

Signature of BOS Chairman, IT

process for Oculus Quest and Android based VR devices– Final project: Develop and showcase a complete functional VR application such as an art gallery, training simulation, or a mini VR game. Practical Component Design and prototype a VR application by integrating navigation, interaction, environment design, and user experience considerations. Test, debug, optimize, build, and deploy a complete VR application for standalone or PC-based VR platforms.	6 Hours
Sample Mini Project Virtual Art Gallery Virtual Museum Tour VR Training Simulator VR Forest Exploration VR Classroom Environment

PE		SDG		9		

Pre-requisite courses	24ADI001 Artificial Intelligence and Automation, 24ADI017 Machine Learning Techniques	Data Book / Codes / Standards (If any)	
------------------------------	--	--	--

Course Objectives:		The purpose of taking this course is to:
1	Apply AI and machine learning concepts to develop intelligent game systems and adaptive gameplay environments	
2	Develop pathfinding, decision-making, and NPC behavior systems using classical game AI techniques.	
3	Analyze machine learning approaches for procedural content generation, player behavior prediction, and adaptive gameplay systems.	
4	Apply AI/ML techniques for automated game testing, optimization, analytics, and intelligent game interactions.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO1	Apply AI and machine learning concepts to identify and implement intelligent behaviors in interactive game environments.		Ap
CO2	Apply pathfinding algorithms, decision-making systems, and utility-based AI techniques to develop interactive NPC behaviors in games.		Ap
CO3	Analyze supervised, unsupervised, and reinforcement learning techniques for player behavior prediction and procedural content generation.		An
CO4	Apply AI and machine learning techniques to develop adaptive NPC interactions, dynamic game environments, and intelligent gameplay systems.		Ap
CO5	Analyze AI/ML-based testing, optimization, and player analytics techniques to improve gameplay performance and user experience.		An

Course Objectives:	The purpose of taking this course is to:
1	Apply the concepts of cloud application design, service models, deployment models, and requirement analysis for developing cloud-based solutions.
2	Analyze cloud application development frameworks and cloud platforms for deploying scalable applications.
3	Apply cloud service delivery mechanisms, API integration, and architectural best practices in cloud ecosystems.
4	Analyze DevOps practices, CI/CD pipelines, monitoring techniques, and containerization technologies for cloud application management.
5	Apply modern cloud development and deployment practices to design scalable, reliable, and efficient cloud-based applications.

Course Outcomes	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Analyse cloud application requirements, service models, deployment types, and challenges such as scalability, security, and interoperability. Apply cloud application design principles, service models, deployment models, and requirement analysis techniques to develop cloud-based solutions.	An
CO 2	Apply cloud based application development frameworks to build scalable applications.	Ap
CO 3	Analyse and compare commercial cloud platforms for application deployment	An
CO 4	Apply agile application development and manage application life cycle using DevOps .	Ap
CO 5	Apply integrated cloud application development and deployment strategies to build scalable, secure, and fault-tolerant cloud solutions.	An

<u>Course Content</u>	
Introduction to Application Design Business case for implementing cloud application, Requirements, collection for cloud application development, Cloud service models and deployment models, Open challenges in Cloud Computing: Cloud inter-operability and standards, scalability and fault tolerance, security, trust and privacy.	6 Hours
Application Development Framework Accessing the clouds: Web application vs Cloud Application, Frameworks: Model View Controller (MVC), Struts, Spring. Cloud platforms in Industry – Google AppEngine, Microsoft Azure, Openshift, CloudFoundry.	8 Hours
Cloud Service Delivery Environment and API Storing objects in the Cloud, Session management, Working with third party APIs: Overview of interconnectivity in Cloud ecosystems. Facebook API, Twitter API, Google API. Architecting for the Cloud : Best practices Best practices in architecture cloud applications in AWS cloud, Amazon Simple Queue Service (SQS), RabbitMQ, Amazon Simple Notification Service (Amazon SNS), multi-player online game hosting on cloud resources, Building content delivery networks using clouds.	8 Hours
DEVOPS in Cloud Continuous Integration/Continuous Deployment (CI/CD), collaboration among development, operations, and other stakeholders, Agile and lean principles: Embracing agile methodologies and lean practices to enable faster development and delivery cycles. Automating development pipelines, Monitoring and Logging, Implementing monitoring solutions for cloud applications, Containerization: Docker basics and container orchestration with Kubernetes.	8 Hours
PROJECT: Projects involving Google AppEngine, Microsoft Azure, Openshift, Cloud Foundry services will be done.	30 Hours

PE		SDG		9		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
-----------------------	-----	--	-----

Course Objectives:		The purpose of taking this course is to:
1	Providing a foundational understanding of OpenStack architecture, key components, workflow, and API functionalities used in cloud infrastructure.	
2	Develop the skills required to configure, launch, and manage compute instances using the OpenStack Horizon dashboard and Command Line Interface (CLI).	
3	Learning about object storage using Swift, including file uploads, permission management, and understanding of data lifecycle operations.	
4	Exploring the techniques to manage cloud-based virtual networks, including configuration of routers, floating IP addresses, and security groups using Neutron.	
5	Introducing identity and access management principles in OpenStack and managing users, roles, and permissions using Keystone services.	

Course Outcomes***:		Bloom's Taxonomy Level (BTL)
After successful completion of this course, the students shall be able to		
CO 1	Apply OpenStack architecture, components, workflows, and API functionalities to deploy and manage cloud infrastructure services.	Ap
CO 2	Configure and manage compute resources using Command Line Interface.	Ap
CO 3	Deploy and manage object storage services, configure access permissions, and apply data lifecycle policies in a cloud environment.	Ap
CO 4	Configure and manage virtual networks, routers, and floating IPs with cloud networking services.	Ap
CO 5	Implement identity and access management by configuring users, roles, and authentication services in a cloud environment.	Ap

<u>Course Content</u>													
Introduction to Cloud Infrastructure Introduction to cloud Infrastructure/virtual infrastructure, General Architecture of virtual infrastructure: Architecture of OpenStack, project, services, mode of deployment, workflow, Openstack Components: Nova, Swift, cinder, Nuutron, Glance, Keystone, Horizon. Virtualization environment with KVM. OpenStack API. Practical Component Single node private cloud setup using Devstack/Packstack													7 Hours
Cloud Compute Architecture Configuring Horizon Dashboard, OpenStack CLI client - Create and manage flavors, compute instances, generate and manage SSH keys, accessing instances, configure an instance with a floating IP address, create instances with security groups, manage Nova host consoles, instance snapshots. Openstack image service: image repository, manage images, metadata, image types, bundling, exporting, migrating images. Practical Component Configure NOVA compute Node - Build a horizon node – Monitor node													9 Hours
Cloud Storage Architecture Swift: features, architecture of swift, swift installation and configuration, data management lifecycle, backup and archival, media storage with swift. Use the command line client to upload and manage files to Swift containers, manage permissions on a container in object storage, Cinder: Architecture of cinder block storage, Volume provisioning and management- create and manage volumes, attach volumes to instances, manage volume quotas, backup and restore volumes, manage volume snapshots. Practical Component Configure Swift object storage - Construct a cinder block node													8 Hours
Cloud Network Architecture Software defined networking, Neutron Architecture, Manage network resources, create external/public networks, create project networks, create project routers, attach routers to public and project networks, manage network services for a virtual environment, manage network quotas, manage network interfaces on compute instances, create and manage project security groups and rules, assign security group to instance, create and manage floating IP addresses, assign floating IP address to instance, detach floating IP address from instance. Identity and access management- keystone: users, roles, groups. Practical Component Launching an instance- Register an account at openstack, Create SSH Key,													8 Hours

		2	0	0	2	3
PE		SDG		9		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	-
------------------------------	------------	---	----------

Course Objectives:		The purpose of taking this course is to:
1	Understanding the principles and practices of automating cloud infrastructure and operational tasks.	
2	Applying the concept of Infrastructure as Code (IaC) to provision, configure, and manage cloud resources efficiently.	
3	Implementing continuous integration and continuous deployment (CI/CD) pipelines to streamline application delivery in cloud environments.	
4	Learning to automate cloud resource management to improve scalability, cost-effectiveness, and operational efficiency.	
5	Exploring cloud-based services to troubleshoot and ensure optimal performance for reliability.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Deploying tools to automate the set up for cloud infrastructure.		Ap
CO 2	Build a Continuous Integration / Continuous Delivery pipeline and automate testing and deployment.		Ap
CO 3	Manage and optimize cloud resources provisioning automatically using containers.		An
CO 4	Compare different monitoring tools to track cloud performance.		An
CO 5	Analyze and integrate public cloud services to design and implement a complete cloud automation project.		An

<u>Course Content</u>	
Introduction to Cloud Automation Benefits of cloud automation - Types of cloud automation tools - Use cases for cloud automation. Managing and provisioning infrastructure through code (using tools like Terraform, Ansible, Puppet, Chef), Automating code integration and verification through tools like Jenkins, GitLab CI, or CircleCI, Automating the deployment process to push code changes into production environments reliably.	7 Hours
Cloud Resource Scaling and Storage Automation Automating resource allocation, de-allocation, and right-sizing of resources based on usage. Kubernetes - Salt -CircleCI - Ansible and puppet, AWS DataSync, Azure Data Factory.	8 Hours
Cloud Automation Tools for DEVOPS DuploCloud - Puppet - Heroku -HashiCorp, Monitoring and Logging Tools – Prometheus, Grafana, Docker, Raygun, Splunk, Git, Ansible, Jenkins, Bamboo.	7 Hours
Cloud Deployment Automation NetApp Cloud Volumes ONTAP - CFEngine -VMware vs Realize Automation - Cisco Intelligent - Automation for Cloud - Microsoft Azure Automation - Google Cloud Deployment Manager – AWS CloudFormation - IBM Cloud Schematics.	8 Hours
PROJECT CONTENTS	
Projects involving different cloud platform services like Puppet, Heroku, HashiCorp and monitoring & Logging Tools – Prometheus, GrSafana, Docker, Raygun, Splunk, Git, Ansible, Jenkins, Bamboo.	30 Hours

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	-
-----------------------	-----	--	---

Course Objectives:		The purpose of taking this course is to:
1	To provide a comprehensive understanding of AWS global infrastructure, core services, and security mechanisms essential for building and managing cloud solutions.	
2	To enable learners to design, deploy, and manage scalable, secure, and cost-efficient compute, storage, database, and networking solutions on AWS.	
3	To develop the ability to architect serverless, hybrid, and container-based solutions aligned with AWS best practices for governance, management, and automation.	
4	To impart knowledge and practical skills in building modern data architectures and data lakes using AWS services such as Glue, Athena, Quick Sight, and Lake Formation.	
5	To prepare learners for the AWS Certified Solutions Architect – Associate examination by reinforcing skills in designing resilient, high-performing, secure, and cost-optimized cloud architectures.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Understanding AWS core services to build a secure and scalable cloud application. [K2]		Ap
CO 2	Deploy serverless, hybrid, and container-based architectures using AWS services adhering to best practices in scalability and security. [K3]		Ap
CO 3	Construct modern data lake solutions on AWS utilizing services for efficient data ingestion, processing, and analytics. [K3]		An
CO 4	Apply AWS design principles to develop resilient, cost-effective, and high-performing solutions aligning with AWS Well-Architected Framework guidelines. [K3]		An
CO 5	Analyze and optimize AWS architectures for performance, cost, and sustainability while demonstrating readiness for AWS Certified Solutions Architect – Associate certification. [K4]		An

CLOUD COMPUTING ESSENTIALS AND AZURE MANAGEMENT LAB Introduction to cloud Computing, Exploring Core Azure services, Azure management and Governance, Project - Cloud computing essentials with Azure Management Project Component: Design and implement a secure Azure cloud solution by configuring Azure Storage services, virtual networks, and Role-Based Access Control (RBAC), monitoring cloud resources using Azure Monitor and Alerts, and integrating compute, storage, and networking services to deploy and manage an end-to-end application with performance monitoring and cost governance.	3 Hours 12 Hours
AZURE CLOUD SERVICES LAB Azure Compute, Azure Networking, Azure Security, Project - Implement a secure, scalable Azure environment incorporating virtual infrastructure. Project Component: Design and implement a secure and resilient Azure cloud infrastructure by configuring virtual networks, security controls, load balancing, identity and access management, and threat monitoring services to deploy a multi-tier application architecture with secure access, high availability, compliance, and cost optimization.	3 Hours 12 Hours
AZURE IDENTITY AND NETWORKING ESSENTIALS LAB Configuring Microsoft Entra ID, Configuring Resources, Configuring virtual networks for advanced security and performance. Project Component: Design and implement a secure and scalable Azure infrastructure by configuring Microsoft Entra ID-based identity and access management, enforcing MFA and	3 Hours 12 Hours

Signature of BOS Chairman, IT

least-privilege policies, deploying and organizing cloud resources with Azure networking services, and establishing secure inter-network connectivity with performance optimization and governance controls.	
AZURE NETWORK CONFIGURATION Configuring Load Balancer, Configuring Storage Accounts, Configuring Azure storage security, Project - Azure Infrastructure: Design, deploy, optimize Project Component: Design and implement a secure and highly available Azure infrastructure by configuring storage services with secure access controls, enabling encryption and secret management, deploying load balancing and web application protection mechanisms, monitoring resource performance and cost efficiency, and automating integrated infrastructure deployment and optimization.	3 Hours 12 Hours
AZURE MONITORING AND ANALYTICS FUNDAMENTALS Introduction to Azure monitor, Configuring Alerts in Azure, Advanced monitoring Techniques, Azure monitoring Implementation Project Component Design and implement an Azure-based monitoring and analytics solution by configuring Log Analytics, alerts, Application Insights, and Azure Network Watcher to collect, analyze, and visualize system performance, network activity, SLA compliance, and operational insights for proactive issue detection and optimization.	3 Hours 12 Hours
AZURE BACKUP, SECURITY, AND COMPLIANCE ADMINISTRATION LAB Configuring backups, Patching / Updating Virtual machines, Azure Cloud compliance, backup and disaster recovery, Project - Comprehensive backup and disaster recovery plan for a simulated Azure environment Project Component Design and implement a secure Azure backup, disaster recovery, and compliance management solution by configuring backup policies, automated recovery mechanisms, patch management, cross-region replication using Azure Site Recovery, and regulatory compliance controls to ensure business continuity, data protection, and operational resilience.	3 Hours 12 Hours

		2	0	2	0	3
PE		SDG	9			

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	---	------------

Course Objectives:

The purpose of taking this course is to:

1	Understand the fundamentals of IoT, its role in improving quality of life, and the major challenges such as energy constraints, data explosion, and security issues.
2	Explain the architecture of IoT systems including hardware components like power supply, processor, memory, sensor interface, and wireless communication technologies.
3	Familiarize students with IoT system design and various wireless communication interfaces such as BLE, Wi-Fi, RFID, and LPWAN technologies like LoRa, LTE-M, Sigfox, and NB-IoT.
4	Understand power management techniques and energy harvesting methods including solar, RF, kinetic, and thermal energy systems for IoT devices.
5	Study IoT communication protocols and real-world applications through case studies and cloud-based IoT systems

Course Outcomes:

After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Explain the core concepts, challenges, and opportunities in the design and deployment of Internet of Things (IoT) systems.	U
CO 2	Develop IoT applications using relevant communication protocols such as MQTT, CoAP, and AMQP for efficient data transmission.	Ap
CO 3	Design energy-efficient IoT architectures using appropriate energy harvesting and power management techniques.	Ap
CO 4	Analyse suitable hardware components such as sensors, microcontrollers, and power sources for specific IoT applications.	An
CO 5	Analyse IoT system performance in terms of scalability, reliability, and security through case studies and prototype demonstrations	An

Course Content	
CLOUD IoT PLATFORMS AND DEVICE CONNECTIVITY Cloud IoT architecture and services - AWS IoT Core, Azure IoT Hub, and IBM Watson IoT – Google Cloud IoT concepts - MQTT and HTTP communication protocols - Device provisioning - and secure communication using TLS/SSL Project components • Configure IoT cloud accounts on AWS IoT Core, Google Cloud IoT, and IBM Watson IoT. • Connect Raspberry Pi / NodeMCU to AWS IoT Core using MQTT over TLS. • Publish and subscribe sensor data • Create dashboards for real-time monitoring using Node-RED and cloud visualization tools. AI Tool - Node-RED AI Assistant - Used to create MQTT workflows, connect IoT devices to cloud platforms, and develop real-time monitoring dashboards using drag-and-drop nodes.	15 Hours
AI-ENABLED IOT DATA ANALYTICS IoT data collection and preprocessing - AI/ML workflow for IoT analytics - Time-series analytics and anomaly detection - Cloud AI services and TensorFlow Lite for edge AI Project components • Collect time-series IoT data (temperature, humidity, light) and store it in cloud databases (Firestore / DynamoDB). • Use Google Cloud AutoML or Azure ML Studio to build predictive models • Deploy a trained ML model on cloud to classify real-time data from IoT devices. • Integrate TensorFlow Lite on edge devices for on-device inference. • Build a Python dashboard to compare edge vs. cloud inference results. AI Tool - Edge Impulse - Used to collect sensor data, train TinyML models, and deploy AI models on edge devices for real-time inference	15 Hours
CLOUD APIs AND IoT APPLICATION DEVELOPMENT REST APIs and cloud functions for IoT - Web and mobile application development for IoT monitoring - Notification and alert services for IoT systems - Cloud deployment and serverless IoT applications Project components • Access IoT data via RESTful APIs • Build mobile dashboards for IoT monitoring and control. • Implement remote device control through APIs. • Deploy IoT applications on cloud platforms. AI Tool - GitHub Copilot - Used to generate API code, develop Flask/Node.js applications, and assist in IoT dashboard	15 Hours
IoT SECURITY AND PRIVACY IMPLEMENTATION Security challenges in IoT systems - Authentication and access control mechanisms - TLS/SSL, AES, RSA Fundamentals - Replay and spoofing attack prevention	15 Hours

Signature of BOS Chairman, IT

Project components • Configure TLS/SSL certificates for device authentication. • Implement role-based access control for IoT devices in IBM Watson IoT. • Encrypt sensor data using AES/RSA before transmission. • Detect and prevent replay or spoofing attacks using secure timestamps and tokens. AI Tool - Microsoft Security Copilot - Used to analyze security threats, identify vulnerabilities, and suggest secure authentication and encryption methods									
EDGE-CLOUD INTEGRATION Edge and Fog Computing concepts - AWS Greengrass and Azure IoT Edge – Edge analytics and bandwidth optimization, and real-time edge inference Project components • Set up an edge gateway using Raspberry Pi for pre-processing and local decision-making. • Deploy edge computing services using AWS Greengrass or Azure IoT Edge. • Compare latency, bandwidth usage, and energy consumption of edge vs. direct cloud upload. • Integrate edge analytics with cloud dashboards and alerts. AI Tool - TensorFlow Lite - Used to deploy AI models on edge devices for local processing, real-time analytics, and reduced cloud dependency						15 Hours			
Development of a mini-project integrating Cloud IoT, AI Analytics, Edge Computing, and Security concepts. Example: • Smart Energy Management System with Cloud AI Prediction • Intelligent Waste Segregation System with Cloud Analytics Dashboard • Secure Smart Agriculture System using IoT Edge and Blockchain • Cloud-Based Air Quality Monitoring with ML-Driven Alerts • Smart Vehicle Tracking System with Encrypted Cloud Logging

Course Objectives:	
The purpose of taking this course is to:	
1	Understand wireless and mobile network architectures with AI-assisted protocol analysis tools.
2	Explore LTE and 5G architectures, use cases, and deploy simulations using AI-guided network tools.
3	Design and implement SDN/NFV using tools like Mininet, Ryu, and AI-powered network controllers.
4	Analyze edge computing and IoT-integrated networks with AI for real-time, low-latency decision making.
5	Evaluate 6G, AI-native networks, satellite internet, quantum communication, and blockchain in networking.

Course Outcomes:		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Apply wireless and mobile networking principles using AI tools (NetSim, NS-3 with AI extensions) to demonstrate protocol behaviour and evaluate network performance in diverse environments.	Ap
CO 2	Apply 4G/5G architectures and AI-powered simulation platforms (MATLAB 5G Toolbox, GNS3) to evaluate performance, network slicing, and deployment readiness.	Ap
CO 3	Apply SDN and NFV paradigms to design programmable, scalable network infrastructure using Mininet, Ryu/ONOS, and AI-assisted code generation tools.	Ap
CO 4	Analyze edge/IoT-integrated networks and propose AI-driven, context-aware solutions using TensorFlow Lite and Edge Impulse for real-time inferencing.	An
CO 5	Analyze future networking trends (6G, AI-native, quantum, blockchain) using AI research tools (Perplexity, NotebookLM) to interpret next-generation communication systems.	An

Fog and edge computing architecture and protocols – Use cases – IoT protocols: MQTT – CoAP – 6LoWPAN – AMQP – Key issues: Security, scalability, and energy efficiency – Edge Intelligence – Real-time analytics at the edge – Digital Twins, AS IoT Greengrass	
Future Trends in Networking 6G vision and technologies: THz communication - AI-native networks - Satellite internet: LEO constellations - Starlink - Blockchain in networking - Quantum communication basics - AI and ML for network: Predictive analysis – Network optimization and anomaly detection - Generative AI for network design, LLM-based network assistants AI Tools: Perplexity AI (research 6G whitepapers & satellite tech), ChatGPT/Claude AI (analyze future networking scenarios)	6 Hours
Project Component • Select a wireless networking scenario (e.g., campus, IoT, vehicular) and simulate topology and routing feasibility using tools like Cisco Packet Tracer or GNS3. • Conduct a comparative study of 4G and 5G architecture and performance using simulation or real-world deployments. Select a 5G use case and design a working prototype or workflow model. • Design and simulate a basic SDN topology in Mininet. Demonstrate controller-switch interaction and capture OpenFlow messages (e.g., FLOW_MOD, PACKET_IN, PACKET_OUT) using Wireshark. • Develop a simple SDN application using Python or REST APIs that programs flow table rules for scenarios like Layer-2 learning switch, basic firewall, or traffic engineering. • Build a latency-aware and secure IoT network for applications like smart agriculture or health monitoring. Integrate edge devices (e.g., Raspberry Pi) using MQTT or CoAP protocols. • Prepare a feasibility report or a prototype on emerging networking technologies such as AI-native 6G, blockchain-based secure networking, or quantum communication. Sample Projects Examples: • Simulation and Performance Analysis of a Campus-Based Wireless Network Using GNS3 • Design and Routing Feasibility Study of an IoT-Enabled Smart City Network • 4G vs. 5G: A Comparative Study with Use Case Prototype for Smart Traffic Management • Building and Simulating a Basic SDN Topology with OpenFlow Protocol in Mininet • Developing an SDN-Based Firewall Using Northbound APIs and Python • Latency-Aware Sensor Data Communication in Smart Agriculture Using MQTT and Raspberry Pi • Blockchain-Based Network Management System for Decentralized IoT Security	30 Hours

24ITE013	INTRODUCTION TO INDUSTRY 4.0 AND INDUSTRIAL INTERNET OF THINGS (Common to CS, IT, AD)	L	T	P	J	C
		3	0	0	0	3
PE		SDG		9		
Pre-requisite courses		Nil		Data Book / Codes / Standards (If any)		Nil

Course Objectives:

The purpose of taking this course is to:

1	Understand the fundamentals of Industry 4.0, industrial communication systems, networking concepts, and smart manufacturing environments.
2	Apply Industry 4.0 technologies such as Cyber Physical Systems, Artificial Intelligence, AR/VR, Big Data, and cybersecurity in industrial applications.
3	Analyze the architecture, layers, sensing methods, and communication techniques used in Industrial IoT systems.
4	Evaluate IIoT analytics, Machine Learning, cloud and fog computing, SDN, and security mechanisms for industrial data management.
5	Demonstrate Industrial IoT applications and case studies in manufacturing, healthcare, power plants, inventory management, and process industries.

Course Outcomes:

After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Explain the fundamentals of Industry 4.0, industrial communication, networking, and smart manufacturing systems.	U
CO 2	Describe Cyber Physical Systems (CPS), Artificial Intelligence, Big Data, and advanced Industry 4.0 technologies used in industrial automation.	U
CO 3	Apply Industrial IoT (IIoT) architectures, sensing, processing, communication, and networking layers in industrial environments.	Ap
CO 4	Analyze IIoT analytics, cloud computing, fog computing, Software Defined Networks (SDN), and security mechanisms for industrial applications.	An
CO 5	Analyze Industrial IoT applications and case studies in manufacturing, healthcare, power plants, inventory management, and process industries to evaluate their effectiveness and real-world implementation.	An

		SDG		8,9		
PE						

Pre-requisite courses	24ADI017 Machine Learning Techniques	Data Book / Code book (If any)	NIL
------------------------------	---	---------------------------------------	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Introduce the foundational concepts of Business Intelligence and Business Analytics, including system architectures, types of analytics, and the end-to-end analytics process from problem definition to deployment.
2	Develop practical skills in data preparation, exploration, and visualization using industry-standard BI tools such as Qlik, with emphasis on data warehousing, OLAP operations, and knowledge management.
3	Equip students with predictive analytics and machine learning techniques for business forecasting, competitive analysis, and data-driven organizational decision-making.
4	Enable the application of domain-specific analytics for HR and Supply Chain Management by integrating cross-functional data and AI-assisted tools to generate operational insights.
5	Foster the ability to apply and analyze BI solutions for marketing and sales analytics, incorporating ethical considerations and critical evaluation of AI-assisted outputs.

Course Outcomes												
After successful completion of this course, the students shall be able to											Revised Bloom's Taxonomy Levels (RBT)	
CO1	Explain the Business Analytics process — from problem definition and data preparation to model deployment — and demonstrate the use of industry-standard BI tools for insight generation.										Un	
CO2	Analyze Business Intelligence architectures, data warehousing principles, OLAP operations, and analytic functions to extract actionable intelligence from enterprise data.										An	
CO3	Apply predictive analytics and machine learning techniques for business forecasting, competitive analysis, and data-driven decision-making.										Ap	
CO4	Apply analytics techniques for HR and Supply Chain domains by integrating cross-functional data and AI-assisted tools to generate operational insights and support workforce and logistics decisions.										Ap	
CO5	Analyze an end-to-end BI application for marketing and sales analytics by examining AI tool contributions, advanced visualization effectiveness, and ethical implications of data-driven decisions.										An

Course Content

UNIT I: INTRODUCTION TO BUSINESS ANALYTICS Analytics and Data Science – Types of Analytics – Business Problem Definition – Data Collection – Data Preparation – Hypothesis Generation – Modeling – Validation and Evaluation – Interpretation – Deployment and Iteration. Practical Component: Explore the interface and basic features of the BI tool (Qlik) – Load and visualize a sample dataset – Navigate the analytics workflow from data ingestion to basic insight generation.	6 Hours
UNIT II: BUSINESS INTELLIGENCE Data Warehouses and Data Mart – Knowledge Management – Types of Decisions – Decision Making Process – Decision Support Systems – Business Intelligence – OLAP – Analytic Functions. Practical Component: Import a dataset into the BI tool – Cleanse data by handling missing values, outliers, and inconsistencies – Transform data to suit BI reporting requirements.	6 Hours
UNIT III: BUSINESS FORECASTING AND COMPETITIVE ANALYSIS Introduction to Business Forecasting and Predictive Analytics – Logic and Data-Driven Models – Data Mining and Predictive Analysis Modelling – Machine Learning for Predictive Analytics – Industry Analysis – Profit Frontier, Risk vs. Return, Competition Positioning – Enterprise Diagnosis. Practical Component: Apply BI tools for forecasting and predictive analytics – Build and evaluate a predictive model for a business scenario – Interpret model outputs and translate findings into actionable business recommendations.	6 Hours
UNIT IV: ANALYTICS – HR AND SUPPLY CHAIN Human Resources – Planning and Recruitment – Training and Development – Supply Chain Network – Planning Demand, Inventory and Supply – Logistics – Analytics Applications in HR and Supply Chain – Applying HR Analytics to predict the demand for talent. Practical Component: Integrate data from various sources for comprehensive cross-functional analysis (SCM/HR) – Apply analytics techniques to monitor key performance indicators via an HR/SCM dashboard.	6 Hours

Signature of BOS Chairman, IT

AI Tool Integration: Use an AI assistant (GitHub Copilot or Claude) to help write data transformation scripts and automate KPI calculations for the HR/SCM dashboard – Use AI-generated DAX or SQL suggestions to accelerate cross-functional data integration – Critically evaluate AI-generated code for correctness, bias in HR predictions, and appropriateness for supply chain contexts.	6 Hours
UNIT V: MARKETING AND SALES ANALYTICS Marketing Strategy – Marketing Mix – Customer Behaviour – Selling Process – Sales Planning – Analytics Applications in Marketing and Sales – Predictive Analytics for customers' behaviour in marketing and sales. Practical Component: AI-Assisted Mini Project: Apply BI tools to build an end-to-end dashboard for a real-world marketing or sales scenario – Use AI tools (GitHub Copilot, Cursor, or Claude) to assist with data wrangling scripts, visualization code, and predictive model integration – Implement advanced chart types (tree maps, heatmaps) and interactive customer segmentation features – Document all AI tool interactions and prompts used – Analyze the dashboard outputs and present a critical examination of the AI's contribution, output quality, limitations, and ethical considerations in marketing analytics.	6 Hours 6 Hours

		2	0	2	0	3
PE		SDG	9			
Pre-requisite courses	24ADI001 Artificial Intelligence and Automation	Data Book / Code book (If any)			NIL	

Course Objectives:	
The purpose of taking this course is to:	
1	Introduce the fundamentals of deep learning and artificial neural networks for intelligent systems.
2	Develop convolutional neural network models for image classification and computer vision applications.
3	Explore sequential deep learning models for natural language processing tasks.
4	Analyze generative and unsupervised deep learning models for feature learning and data generation.
5	Examine transformer architectures and large language models for modern AI applications.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Implement neural network training mechanisms, activation functions, optimization strategies, and regularization methods to construct deep learning models for regression and classification problems.	Ap
CO2	Apply convolution-based deep learning techniques and pretrained models for solving image analysis and recognition tasks.	Ap
CO3	Develop deep learning models for sequential data processing and natural language applications using sequence learning techniques.	Ap
CO4	Analyze unsupervised and generative deep learning approaches for feature representation, dimensionality reduction, and data generation tasks.	An
CO5	Analyze transformer-based architectures and advanced language modeling techniques for developing intelligent AI-driven applications.	An

Course Content													
INTRODUCTION TO DEEP LEARNING Introduction to Artificial Neural Networks - MP Neurons and Perceptrons - Feedforward Neural Networks and Network Layers - Activation Functions: Sigmoid, Tanh and ReLU - Training Neural Networks: Weights, Biases, Loss Functions and Backpropagation - Optimization Methods: Gradient Descent and Variants - Regularization Techniques												9 Hours	
Practical Component Build and train a simple Artificial Neural Network (ANN) using TensorFlow or PyTorch for regression and classification tasks - Visualize Sigmoid, Tanh and ReLU activation functions and compare their effects on model performance - Experiment with Gradient Descent optimization variants and analyze convergence behavior during training - Implement and manage Deep Learning experiments using Google Colab and GitHub												6 Hours	
CONVOLUTIONAL NEURAL NETWORKS Introduction to Convolutional Neural Networks (CNNs) - Convolution Operation - Filters, Stride, Padding and Parameter Sharing - Pooling Layers - Fully Connected Layers - Regularization Techniques for CNNs - Popular CNN Architectures: AlexNet, VGGNet and ResNet												9 Hours	
Practical Component Implement CNN model for image classification - Apply transfer learning using ResNet/AlexNet for image recognition - Use Kaggle datasets and Hugging Face pre-trained vision models for experimentation.												6 Hours	
SEQUENTIAL MODELING Recurrent Neural Networks (RNNs) - Vanishing and Exploding Gradient Problems in RNNs - Bidirectional RNNs - Long Short-Term Memory (LSTM) Networks - Gated Recurrent Units (GRUs) - Tokenization and Word Embeddings - Natural Language Processing using RNNs												9 Hours	
Practical Component Train a Recurrent Neural Network (RNN) for text generation - Implement LSTM for sentiment analysis - Perform text preprocessing and embedding generation using NLP libraries.												6 Hours	
GENERATIVE AND UNSUPERVISED DEEP LEARNING MODELS Introduction to Representation Learning - Unsupervised Deep Learning - Energy-Based Models - Boltzmann Machines - Deep Belief Networks - Autoencoders and Variants - Generative Adversarial Networks (GANs)												9 Hours	
Practical Component Train a simple Autoencoder for dimensionality reduction and feature learning - Generate synthetic images using a Generative Adversarial Network (GAN)												6 Hours

PE		SDG		9, 13		

Pre-requisite courses	24ADI017 Machine Learning Techniques	Data Book / Codes / Standards (If any)	NIL
------------------------------	---	---	------------

Course Objectives:

The purpose of taking this course is to:

1	Understand the importance of Responsible AI and its impact on society.
2	Examine fairness, accountability, and ethical issues in AI systems.
3	Use tools and techniques to improve transparency, privacy, and trust in AI models.
4	Learn sustainable and Green AI practices to reduce environmental impact.
5	Understand AI ethics frameworks, legal regulations, and responsible AI practices.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Analyze the principles of Responsible AI and the societal benefits, challenges, and impacts of AI systems.	An
CO2	Apply bias detection and mitigation techniques to improve fairness in AI systems.	Ap
CO3	Analyze privacy, security, transparency, and explainability issues in trustworthy AI systems using appropriate methods and tools.	An
CO4	Apply sustainable AI strategies and Green AI tools to evaluate and reduce the environmental impact of AI models.	Ap
CO5	Analyze global AI ethics frameworks, legal standards, and case studies to support responsible AI practices.	An

Course Content

INTRODUCTION TO RESPONSIBLE AI Role of AI in society: Benefits and challenges - Need for Responsible AI: Ethical, legal, social, and environmental perspectives - Core principles: Fairness, Accountability, Transparency, Safety, Sustainability - Stakeholders of AI: Developers, Users, Affected communities, Policymakers - Case studies of AI failures and unintended consequences - Introduction to Responsible AI tools and platforms.	7 Hours
BIAS DETECTION AND MITIGATION Types of bias in AI: Historical bias, Representation bias, Measurement bias, Aggregation bias - Fairness in machine learning: Definitions, Trade-offs, Limitations - Detection and mitigation of bias: Pre-processing, In-processing, Post-processing techniques - Case studies: AI in hiring, Loan approval, Predictive policing - Tools and frameworks for fairness auditing: AI Fairness 360, Fairlearn, What-If Tool.	10 Hours
SECURE AND TRUSTWORTHY AI SYSTEMS Privacy issues in AI: Data collection, Surveillance, Consent - Privacy-preserving techniques: Anonymization, Differential privacy, Federated learning - Adversarial threats: Model stealing, Adversarial examples, Membership inference - Trust and transparency in AI systems: Interpretability, Explainability (XAI) - Interpretable Models: Linear Regression, Logistic Regression, Decision Tree - Tools for explainability and privacy: LIME, SHAP, Captum, TensorFlow Privacy.	10 Hours
SUSTAINABLE AND GREEN AI Introduction to Green AI: Definition, Red vs Green AI paradigm - Carbon footprint of large-scale AI models: GPT, BERT, Training and inference phases - Estimating emissions: Experiment tracking, Energy profiling tools, ML CO2 - Infrastructure and sustainability: GPU vs TPU, Data centres, Renewable energy use - Strategies for sustainable AI: Efficient model design, Pruning, Quantization, Transfer learning - Green AI tools: CodeCarbon, ML CO2 Calculator, Energy monitoring tools.	10 Hours
GLOBAL ETHICS, LEGAL STANDARDS, PROJECT AND CASE STUDY Overview of global AI ethics frameworks: OECD, UNESCO, EU AI Act, India's NITI Aayog - Legal and governance frameworks: GDPR, AI Bill of Rights - Algorithmic accountability and audit mechanisms - Open-source ethics initiatives: Partnership on AI, AI Now Institute - Future directions in Responsible AI: Human-in-the-loop AI and Ethics by design - Mini project or case study analysis related to Responsible AI, Bias detection, Explainable AI, Privacy-preserving AI, or Green AI systems.	8 Hours

24ADC004	GENERATIVE AI (Common to CS, IT, & AD)	L	T	P	J	C
		2	0	2	0	3
PE		SDG		4,8		

Pre-requisite courses	24ADI001 Artificial Intelligence and Automation	Data Book / Codes / Standards (If any)	NIL
------------------------------	--	---	------------

Course Objectives:

The purpose of taking this course is to:

1	Provide an understanding of the foundational principles, history, and capabilities of Generative AI, including its tools and economic potential.
2	Familiarize students with Large Language Models, transformer architectures, Retrieval-Augmented Generation, and prompt engineering techniques.
3	Introduce vision, code-capable, and multimodal generative models for applying image generation, code synthesis, and automated testing in practical scenarios.
4	Present video generation techniques using GANs, VAEs, diffusion models, and transformer-based architectures with practical video synthesis workflows.
5	Explore Agentic AI frameworks and real-world Generative AI applications, with emphasis on analyzing ethical considerations, societal impacts, and regulatory challenges.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Explain the foundational concepts of Generative AI, including its history, capabilities, tools, and prompt engineering techniques.	Un
CO2	Apply Large Language Models and Retrieval-Augmented Generation techniques to perform natural language processing tasks using transformer-based architectures.	Ap
CO3	Apply vision-capable and code-generation models to produce, edit, and test outputs from natural language prompts across image generation and code synthesis tasks.	Ap
CO4	Analyze video generation techniques using GANs, diffusion models, and transformers, comparing their effectiveness for various synthesis tasks.	An
CO5	Analyze real-world Generative AI applications and autonomous agent architectures, examining ethical, societal, and regulatory implications of their deployment.	An

Course Content

UNIT I: INTRODUCTION TO GENERATIVE AI Capabilities - History and Evolution - Benefits - Challenges - Applications of Generative AI – Tools for Text, Image, Code, Audio and Video generation – Economic Potential of Generative AI - Prompt Creation - Writing effective prompts - Techniques for using text prompts: Zero-shot and few-shot prompt techniques – Prompt engineering approaches: Interview pattern, Chain-of-Thought, Tree-of-Thought - Benefits of using text prompts - Challenges in generating meaningful and coherent prompts. Practical Component: Text Generation - Image Generation - Chain-of-Thought Approach - Interview Pattern Approach - Tree-of-Thought Approach - Write a function that accepts English sentences and converts them into predicate logic format using a rule-based approach.	6 Hours
UNIT II: LARGE LANGUAGE MODELS Overview - Transformer architecture - Types of LLM - Small language models – Tokens - Embeddings - Prompt engineering - Model adaptation - Metrics - Working through an API – RAG - Vector databases - RAG architecture - RAG metrics - Overcoming challenges for chunking. Practical Component: Interacting with a Large Language Model through an API - Perform text summarization and question answering - Retrieval-Augmented Generation pipeline using a small language model and a vector database.	6 Hours 6 Hours
UNIT III: GENERATING IMAGES AND CODE Vision models - Vision Transformer – Diffusion models – Multimodal models - Editing and enhancing images using Stable Diffusion - Code generation - Code explanation - Generate tests. Practical Component: Apply a Stable Diffusion model to generate, edit, and enhance images based on textual prompts. Use a code-capable language model to generate code from natural language prompts, explain given code snippets, and automatically generate unit tests.	6 Hours 6 Hours
UNIT IV: GENERATING VIDEO GANs for video - Variational Autoencoders for video - Transformer-based video generation - Diffusion models for video - Text-to-Video Generation - Image-to-	6 Hours

Signature of BOS Chairman, IT

Video Translation - Pose-guided video synthesis - Audio-to-lip synchronization - Deepfakes and facial reenactment. Practical Component: Text-to-Video Generation using Transformer or Diffusion-based Models – Audio-to-Lip Synchronization and Pose-Guided Video Synthesis. AI Tool Integration: Use GitHub Copilot or Claude to assist in writing and debugging the video generation pipeline code – Compare and critically evaluate AI-assisted vs. manually written code for the same video generation task.	6 Hours
UNIT V: AGENTIC AI AND GENERATIVE AI APPLICATIONS Agentic AI - Definition – LangGraph Overview - Agent Architecture - Agent Autonomy - The Impacts of Generative AI on Business and Society - Emerging Trends and Technologies in Generative AI - Ethical Challenges and Regulatory Frameworks - Real-world Applications of Large Language Models - Challenges and Limitations of Current Approaches. Practical Component: AI-Assisted Mini Project: Apply Generative AI capabilities to build a small end-to-end application integrating at least two GenAI components (e.g., LLM + RAG, image generation + agent, or video + agentic workflow) – Use AI tools throughout the development process to assist with code generation, debugging, and documentation – Analyze the AI's role, output quality, limitations, and ethical considerations and present findings. Designing an Autonomous Agent using LangGraph Framework – Case Study on Real-World Application of Generative AI with Ethical and Societal Impact Analysis.	6 Hours

PE		SDG		9,16		

Pre-requisite courses	24ADI017 Machine Learning Techniques	Data Book / Code book (If any)	NIL
------------------------------	---	---------------------------------------	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Acquire knowledge of fundamental graph theory concepts, network data types, and key metrics used in social network analysis.
2	Develop practical skills in collecting, processing, analyzing, and visualizing network data using standard Python libraries and visualization tools.
3	Gain competency in interpreting network structures, identifying key actors and communities, and understanding basic network dynamics.
4	Understand the application of SNA techniques in various domains, particularly social media and organizational contexts, while considering ethical implications.
5	Develop the ability to critically evaluate network analysis results and communicate findings effectively through visualizations.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply graph representation methods, software libraries, and algorithms to model social networks and compute key metrics.	Ap
CO2	Analyze network structures to identify key actors, communities, and overall network properties.	An
CO3	Analyze patterns of connection, influence, and information flow within networks using concepts like homophily, structural holes, and basic diffusion models.	An
CO4	Analyze the suitability and limitations of different SNA metrics and algorithms for specific analytical goals or research questions.	An
CO5	Analyze the broader implications, ethical considerations, and potential applications of social network analysis findings across various domains	An

		2	0	2	0	3
PE		SDG		9-12		

Pre-requisite courses	24ADI017 Machine Learning Techniques & 24CSI105 - Embedded Computing Systems	Data Book / Code book (If any)	NIL
------------------------------	---	---------------------------------------	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Acquire knowledge of Digital Twin concepts, architectures, enabling technologies, IoT, Cloud, Simulation, AI and application domains.
2	Develop practical skills in acquiring, processing, managing, and analysing time-series data from sensors relevant to Digital Twins using appropriate tools and Machine Learning algorithms.
3	Gain competency in analysing Digital Twin architectures, data flows, and the suitability of different modelling approaches.
4	Understand the challenges related to model fidelity, data synchronization, and integration within Digital Twin systems.
5	Develop the ability to evaluate the effectiveness, business value, implementation challenges, and ethical considerations of Digital Twin solutions.

Course Outcomes		
After successful completion of this course- the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply techniques for ingesting, cleaning, storing, and managing time, series sensor data relevant to Digital Twins.	Ap
CO2	Apply machine learning algorithms such as anomaly detection, forecasting to analyse Digital Twin data streams for prediction or diagnostics.	Ap
CO3	Analyse the data flow, integration points, synchronization challenges, and fidelity requirements within a Digital Twin architecture linking physical and digital components.	An
CO4	Analyse the suitability and trade-offs of different modelling approaches for representing physical asset behaviour within a Digital Twin.	An
CO5	Analyze the effectiveness, potential ROI, scalability, security, and implementation considerations of a Digital Twin solution by examining its predictive accuracy and impact on operational KPIs	An

Pre-requisite courses	NIL	Data Book / Codes / Standards (If any)	NIL
------------------------------	------------	---	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Build basic Generative AI applications using LLMs, prompts, and simple RAG workflows.
2	Use vector databases and embedding models to perform similarity search and improve retrieval.
3	Create intelligent agents that can call tools, use memory, and solve tasks through reasoning.
4	Develop multi-step agent workflows using LangGraph for structured and collaborative tasks.
5	Implement multi-agent systems using frameworks like CrewAI or AutoGen, including simple multimodal tasks.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply foundational Generative AI techniques to build LLM-based applications.	Ap
CO2	Develop Retrieval-Augmented Generation systems using vector databases and advanced retrievers.	Ap
CO3	Design agentic systems using LangChain agents, tool calling, and multi-step reasoning frameworks.	Ap
CO4	Build stateful, multi-agent RAG and reasoning workflows using LangGraph and other agentic orchestration frameworks.	Ap
CO5	Analyze multimodal reasoning with advanced agentic frameworks to design and justify intelligent end-to-end applications.	An

Course Contents													
FOUNDATIONS OF GENERATIVE AI & RAG												3 Hours	
Introduction to Large Language Models (LLMs) – Prompt Engineering – In-context Learning – Generative AI Applications – Retrieval-Augmented Generation (RAG) – LangChain and LlamaIndex Basics – Document Loading and Chunking – Embeddings and Similarity Search – Retrieval Evaluation – Hallucination Reduction Techniques – Building Simple RAG Applications.													
VECTOR DATABASES & ADVANCED RETRIEVERS												3 Hours	
Introduction to Vector Databases – Similarity Search Techniques – Retrieval Optimization – Embedding Models – Metadata Filtering – Hybrid Retrieval – Advanced Retrievers – Contextual Compression Retrievers – Parent Document Retrievers – Retrieval Evaluation – Building Retrieval Pipelines.													
LANGCHAIN AGENTS & TOOL CALLING												3 Hours	
Introduction to AI Agents – LangChain Agent Workflows – Tool Calling – Agent Memory – LCEL Chaining – External Tool Integration – SQL and Python Tools – API Integration – ReAct Framework – Structured Output Generation – Agent Debugging and Optimization.													
LANGGRAPH & AGENTIC RAG WORKFLOWS												3 Hours	
Introduction to LangGraph – Stateful Agent Workflows – Graph-based Orchestration – Multi-step Reasoning Workflows – Reflection and Reflexion Agents – Agentic RAG Pipelines – Knowledge Base Integration – Workflow State Management – Multi-agent Coordination – Workflow Monitoring and Evaluation.													
ADVANCED MULTI-AGENT SYSTEMS												3 Hours	
Introduction to Multi-Agent Systems – CrewAI Framework – AutoGen Framework – BeeAI Framework – Agent Coordination and Collaboration – Evaluator–Optimizer Patterns – Task Planning and Delegation – Multimodal AI Agents – Image Captioning – Document Inspection – Visual Question Answering (VQA) – Ethical and Responsible Agentic AI.													
PROJECT												60 Hours	
To design and develop an end-to-end Agentic AI application that integrates Retrieval-Augmented Generation (RAG), vector databases, intelligent agents, and multi-agent workflows. The system should support document retrieval, semantic search, tool calling, multi-step reasoning, and collaborative agent interactions through frameworks such as LangChain, LangGraph, CrewAI, AutoGen, or BeeAI, culminating in a functional AI-powered solution for a real-world application.													
Final Deliverables (Presentation & Report)													
• GitHub repository with source code, sample datasets/documents, and README. • Functional Agentic AI application with RAG, agents, and workflow orchestration. • 10-minute project presentation demonstrating architecture, workflow, and results. • Final report summarizing problem statement, methodology, tools/frameworks used, implementation, evaluation results, and future enhancements.

Pre-requisite courses	NIL	Data Book / Codes / Standards (If any)	NIL
-----------------------	-----	--	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Set up basic AI/ML environments in Azure and manage data pipelines and model deployments.
2	Build and test machine learning and deep learning models using real-world datasets.
3	Create simple troubleshooting agents by fine-tuning LLMs and adding NLP components.
4	Apply MLOps practices to automate model training, deployment, and monitoring.
5	Develop advanced and responsible AI systems using techniques like transfer learning, federated learning, and explainable AI.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Understand the components and workflows of AI/ML infrastructure including data pipelines, frameworks, and deployment environments.	U
CO2	Implement various machine learning and deep learning algorithms using suitable metrics and architecture.	Ap
CO3	Design intelligent troubleshooting agents using LLM fine-tuning, NLP techniques, and multi-agent systems.	Ap
CO4	Develop AI/ML solutions using Microsoft Azure with automated deployment, monitoring, and troubleshooting capabilities.	Ap
CO5	Analyze advanced ML architectures and apply ethical, explainable, and responsible AI principles in end-to-end system design.	An

Course Content													
AZURE AI/ML INFRASTRUCTURE												3 Hours	
Introduction to Microsoft Azure AI Services – Azure Machine Learning Workspace – Compute Resources and Cloud Storage – Dataset Creation and Management – Data Preparation Techniques – AI/ML Workflow Setup – Experiment Tracking – Workflow Automation – Version Control for AI Projects – Security and Access Management – Reproducible AI Workflows.													
MACHINE LEARNING & DEEP LEARNING												3 Hours	
Introduction to Machine Learning – Supervised and Unsupervised Learning – Classification and Clustering – Decision Trees – K-Means Clustering – Deep Learning Fundamentals – Neural Networks – Model Training and Testing – Feature Selection – Cross-Validation – Model Evaluation Metrics – Hyperparameter Tuning – Model Interpretation.													
INTELLIGENT TROUBLESHOOTING AGENT												3 Hours	
Introduction to Intelligent Agents – Domain-Specific Language Models – Fine-Tuning Techniques – LoRA and QLoRA – NLP Techniques – Intent Detection – Sentiment Analysis – Conversational AI – Decision-Making Architectures – Automated Support Systems – Agent Testing and Optimization – AI Agent Deployment.													
AI/ML OPERATIONS AND AUTOMATION												3 Hours	
Introduction to MLOps – Automated ML Pipelines – Data Ingestion Pipelines – Model Deployment Strategies – CI/CD for AI/ML Applications – Authentication and Access Control – Monitoring and Logging – Alerting Systems – Troubleshooting and Diagnostics – Scalable ML Operations – Performance Monitoring and Reporting.													
ADVANCED AND RESPONSIBLE AI SYSTEMS												3 Hours	
Introduction to Advanced AI Techniques – Transfer Learning – Federated Learning – Ensemble Learning – Distributed AI Systems – Privacy-Preserving AI – Differential Privacy – Data Sharding – Explainable AI (XAI) – Bias and Fairness in AI – AI Transparency and Accountability – Responsible AI Evaluation.													
PROJECT												60 Hours	
To design and develop an end-to-end MLOps and Responsible AI solution that integrates cloud-based AI development, machine learning model building, large language model fine-tuning, automated deployment pipelines, and responsible AI practices. The system should support data management, model training and evaluation, workflow automation, deployment, monitoring, explainability, privacy preservation, and continuous improvement using real-world datasets and industry-standard tools.													
Final Deliverables (Presentation & Report)													
• GitHub repository with source code, datasets, configuration files, and README • Functional MLOps pipeline with model training, deployment, monitoring, and automation													

Signature of BOS Chairman, IT

• Fine-tuned AI/LLM-based application demonstrating practical use of ML, DL, or NLP techniques • 10-minute project presentation showcasing architecture, implementation, evaluation, and deployment workflow • Final report summarizing problem statement, methodology, tools and frameworks used, experimental results, responsible AI considerations, and future enhancements.
