

KUMARAGURU COLLEGE OF TECHNOLOGY

An autonomous Institution affiliated to Anna University, Chennai

COIMBATORE – 641 049.

B.TECH. INFORMATION TECHNOLOGY

REGULATION 2024 (2026 Batch)

I to VIII Semesters

Department of Information Technology

Signature of BOS Chairman, IT

VISION

The department of Information Technology aspires to become a school of excellence in providing quality education, constructive research and professional opportunities in Information Technology.

MISSION

- To provide academic programs that engage, enlighten and empower the students to learn technology through practice, service and outreach
- To educate the students about social responsibilities and entrepreneurship
- To encourage research through continuous improvement in infrastructure, curriculum and faculty development in collaboration with industry and institutions.

PROGRAM SPECIFIC OUTCOMES (PSOs)

The Program Specific Outcomes of Information Technology Undergraduate Program are:

PSO1: IT Systems Innovation and Management

Graduates will design and manage secure, scalable IT systems that address real-world challenges with technological and social relevance.

PSO2: Emerging Tech for Business Impact

Graduates will apply cutting-edge technologies to create innovative, ethical solutions that drive business transformation and community advancement.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: Graduates will demonstrate career progression in Information and Communication Technologies by acquiring higher qualifications or industry certifications and advancing in professional roles.

PEO2: Graduates will be leaders in their chosen field

PEO3: Graduates will utilize the acquired technical skills and knowledge for the benefit of society

Signature of BOS Chairman, IT

PROGRAM OUTCOMES (POs)

Graduates of the Information Technology Undergraduate Program should have the ability to:

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization to develop to the solution of complex engineering problems.

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development.

PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required.

PO4: Conduct Investigations of Complex Problems: Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions.

PO5: Engineering Tool Usage: Create, select, and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems.

PO6: The Engineer and The World: Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture, and environment.

PO7: Ethics: Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws.

PO8: Individual and Collaborative Teamwork: Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

PO9: Communication: Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences.

PO10: Project Management and Finance: Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

Signature of BOS Chairman, IT

PO11: Life-Long Learning: Recognize the need for and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

24CSI022	PROGRAMMING IN C (Common to CS, IT, AD)	L	T	P	J	C
		1	0	4	0	3
ES		SDG		9		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	---	------------

Course Objectives:		The purpose of taking this course is to:
1	Gain proficiency in logical reasoning and problem-solving using algorithms and flowcharts.	
2	Acquire knowledge of fundamental programming constructs in C, including data types, variables, control structures, and input/output operations.	
3	Attain the capability to address real-world problems by utilizing arrays, strings, and modular programming with functions.	
4	Introduce concepts of pointers, storage classes, and structures as tools for effective data representation and management.	
5	Provide hands-on experience in building C-based applications that incorporate file operations, debugging strategies, and best coding practices.	

Course Outcomes:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Illustrate the algorithmic problem-solving techniques using flowcharts and pseudocode.		U
CO 2	Solve computational problems by applying decision-making constructs and iterative controls using basic C programming.		Ap
CO 3	Apply arrays, strings, and functions to solve programming challenges using modular programming.		Ap
CO 4	Utilize pointers, storage classes, and structures for efficient data manipulation and memory management, incorporating file operations in problem-solving scenarios.		Ap
CO 5	Apply debugging techniques and tools to identify, trace, and correct syntax, logical, and runtime errors in C programs.		Ap

FUNCTIONS AND STORAGE CLASSES Defining a function - Accessing a function - Function prototypes -User defined Function – Actual and Formal parameters - Passing arrays to functions - Function with string - Recursion - Storage classes Practical Component Programs using functions with arguments and return values, Recursive functions (e.g., factorial, Fibonacci, sum of numbers), Passing arrays and strings to functions, Programs demonstrating storage classes: auto, static, extern, register	3 Hours 12 Hours
POINTERS, STRUCTURES AND UNIONS Pointer Fundamentals - Pointer Declaration - Passing Pointers to a Function, call by value, call by reference- Pointers and arrays - Operations on pointers - Dynamic memory allocation- Structures and Unions: Defining a Structure - Processing a Structure - User defined data types (Typedef) -Unions Practical Component Using Pointers - operations and arithmetic, swapping values using pointers, array manipulation- searching. Dynamic memory allocation using malloc, calloc, and free, Programs using structures and unions, Accessing structure members using pointers	3 Hours 12 Hours
FILES AND DEBUGGING File Operations -Open,close, read,write- Processing a data file -Unformatted data files - Concept of binary files - Accessing a file randomly using fseek- Types of errors: Syntax, Logical, Runtime – Debugging techniques: Tracing with printf(), setting breakpoints, step-by-step execution – Introduction to debugging tools: gcc -g, GDB- Integrated Development Environment – Best practices in debugging C programs. Practical Component Text and Binary File read/write operations with Structures and Union – Search and Replace using fseek, Debugging C programs using printf() tracing and GDB, Identifying and fixing errors- integer division, incorrect loop condition, reading a non-existing file, Divide by zero, Accessing array out of bounds.	3 Hours 12 Hours

		3	0	2	0	4
ES		SDG		9		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	---	------------

Course Objectives:	The purpose of taking this course is to:
1	Provide a strong foundation in digital systems, number systems, binary codes, and Boolean algebra.
2	Develop the ability to represent and simplify Boolean functions using Karnaugh map techniques and universal gates.
3	Enable students to analyze and design combinational logic circuits for arithmetic and data processing applications.
4	Equip students with the knowledge of sequential logic circuits, including flip-flops, counters, and registers.
5	Introduce digital logic families, programmable logic devices, and hardware description languages for digital system implementation.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Apply the concepts of digital systems, number systems, binary codes, and Boolean algebra to solve problems in digital logic representation.	Ap
CO 2	Apply Boolean function representation and minimization techniques to obtain optimized logic expressions for digital circuit implementation.	Ap
CO 3	Design combinational logic circuits for arithmetic and data processing applications based on given specifications.	Ap
CO 4	Demonstrate sequential logic circuit concepts including flip-flops, counters, and registers in digital system operations.	Ap
CO 5	Illustrate digital system realization using logic families, programmable logic devices, and basic VHDL modeling techniques.	Ap

Demultiplexers-Parity checker and Generator-Applications of Combinational Logic Circuits. Practical Component: 1. Design and construct half adders, full adders, half subtractors, and full subtractors. 2. Develop a code converter circuit using logic gates. 3. Design and implement decoder and encoder circuits. 4. Construct multiplexers and demultiplexers and incorporate them into circuit designs. 5. Design and implement a circuit for a parity generator and parity checker using logic gates.	12 Hours
SEQUENTIAL LOGIC CIRCUITS Introduction to Sequential Logic Circuits, Latches and Flip-Flops, SR Flip-Flop, JK Flip-Flop, D Flip-Flop, T Flip-Flop, Edge Triggering and Level Triggering, Flip-Flop Conversions, Asynchronous Counters, Synchronous Counters, Decade Counter, Ring Counter, Registers, Shift Registers (SISO, SIPO, PISO, PIPO), Applications of Sequential Logic Circuits. Practical Component: 1. Implement and test various types of shift registers. 2. Design and build a synchronous and asynchronous counter.	9 Hours 6 Hours
LOGIC FAMILIES AND PROGRAMMABLE DEVICES Digital Logic Families, RTL, DTL, TTL, ECL and CMOS Logic Families, Characteristics and Comparison of Logic Families, Programmable Logic Devices, Programmable Logic Array (PLA), Programmable Array Logic (PAL), Complex Programmable Logic Devices (CPLD), Field Programmable Gate Arrays (FPGA), Implementation of Combinational Logic Circuits using PLA and PAL, Introduction to Hardware Description Languages, Basics of VHDL Modeling and Simulation for Arithmetic Circuits. Practical Component: 1. Implement and simulate arithmetic circuits using VHDL models.	9 Hours 4 Hours

Pre-requisite courses	NIL	Data Book / Code book (If any)	NIL
-----------------------	-----	--------------------------------	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Introduce the basics of Python, including data types, operators, and control structures, with a focus on practical implementation.
2	Develop proficiency in iterative statements, string handling, and fundamental data structures like lists, tuples, and dictionaries through extensive lab work.
3	Provide foundational knowledge on modules, functions, object-oriented programming (OOP) concepts, and file handling.
4	Familiarize students with exception handling and Python's standard libraries like NumPy and Pandas for data manipulation.
5	Enable students to apply Python concepts to solve real-world problems through practical, hands-on experiments.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply Python syntax, data types, operators, and basic control structures through practical programs.	Ap
CO2	Apply conditional and iterative constructs for solving logical problems.	Ap
CO3	Implement modular programming concepts, handle strings, and utilize data structures efficiently.	Ap
CO4	Demonstrate object-oriented programming, file handling, and exception handling in Python.	Ap
CO5	Utilize libraries like NumPy and Pandas for data analysis and manipulation.	Ap

Course Content	
Python Basics and Control Structures Python Basics: Python syntax – Variables - Data Types - Type Casting - Arithmetic & Logical Operators. Conditional Branching Statements: if, if-else, if-elif-else, nested conditions. Iterative Statements: for loop, while loop, Loop Control Statements. Practical Component: Implement basic Python programs to demonstrate data types, operators, and input/output operations. Develop programs using all forms of conditional statements. Write extensive Python scripts using for and while loops to generate complex patterns, various series like Fibonacci, arithmetic progression, and solve simple mathematical/logical problems.	3 Hours 10 Hours
Python Functions, Strings, and Data Structures Defining functions, Function arguments - Return values - Anonymous Lambda Functions. Modules - built-in and user-defined modules - String Handling: String slicing, concatenation, formatting, and methods - List: Creating lists - List indexing - List methods - List comprehension. Tuple - Characteristics of tuples - Tuple indexing, Tuple methods. Dictionary: Key-value pairs, Dictionary methods. Sets in Python: Create, Add, Remove with Examples. Python Regular Expressions (RegEx) basics	3 Hours

		2	0	4	0	4
PC		SDG	9			
Pre-requisite courses	NIL	Data Book / Code book (If any)		NIL		

Course Objectives:

The purpose of taking this course is to:

1	Provide foundational knowledge of data structures, searching and sorting algorithms, string processing techniques, and algorithm analysis for developing efficient software solutions.
2	Develop the ability to implement and analyze linear data structures such as stacks, queues, and linked lists for real-world applications.
3	Apply non-linear data structures including trees and heaps for efficient storage, searching, and data organization.
4	Analyze graph algorithms for solving complex computational and optimization problems.
5	Understand and apply hashing techniques, hash functions, and collision resolution methods for efficient data storage, retrieval, and management in computing applications.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Apply searching, sorting, and string processing algorithms using appropriate data structures and analyze their efficiency using asymptotic notations.	Ap
CO 2	Apply linear data structures such as arrays, stacks, queues, and linked lists for solving computational problems.	Ap
CO 3	Implement and analyze tree-based data structures including BST, AVL trees, and heaps for efficient data processing.	Ap
CO 4	Apply graph algorithms such as BFS, DFS, shortest path, and minimum spanning tree algorithms for problem solving.	Ap
CO5	Design efficient hashing techniques with suitable collision resolution methods and evaluate their performance in data storage and retrieval applications.	Ap

5	2	2									2	
INTRODUCTION TO DATA STRUCTURES AND ALGORITHMS											6 Hours	
Theory Component: Introduction to Data Structures and Algorithms, Importance of data structures in programming and software development, data types vs data structures, Abstract Data Types (ADTs), arrays, two-pointer technique. Searching: Linear, Binary search. Sorting Algorithms: Bubble Sort, Selection sort, insertion sort. Merge sort. String algorithms . Algorithm analysis: Big O, Big Theta, Big Omega notations												
Practical Component Implementation of List ADT using arrays, Linear and Binary Search, Sorting, string algorithms.											12 Hours	
LINEAR DATA STRUCTURES											7 Hours	
Theory Component: Stacks: Implementation of stack and Applications (infix to postfix, expression evaluation, parenthesis matching) Queues: Implementation of Queue, Circular Queue, Applications, Linked Lists (Single, Double, and Circular linked implementation), Linked list implementation of Stack & Queue												
Practical Component Implementation of ADT for Linear Data structures(stack, Queue and Linked list) and it's applications.											14 Hours	
NON-LINEAR DATA STRUCTURES TREES											7 Hours	
Theory Component: Trees: Binary Trees, Binary Search Trees, Tree Traversals, AVL Trees, Heap tree.												
Practical Component Implementation of BST and AVL trees and heap operations.											14 Hours	
NON-LINEAR DATA STRUCTURES GRAPHS											6 Hours	
Theory Component: Graphs: Terminologies, Representation (Adjacency Matrix, List), Graph Traversal (BFS, DFS), Spanning Trees Prim's algorithm, Kruskal's algorithm, Shortest Path Algorithms (Dijkstra, Floyd-Warshall).												
Practical Component. Implementation of graph traversals, solve shortest path problems, implement MST algorithms.											12 Hours	
HASHING TECHNIQUES											4 Hours	
Theory Component: Hashing: Hash Functions, Collision Resolution Techniques, Linear probing, Quadratic probing, random probing, Double hashing and rehashing.												
Practical Component Implementation of hashing techniques and collision resolution techniques											8 Hours

24ITT203	COMPUTER ORGANIZATION AND ARCHITECTURE (Common to CS, IT)	L	T	P	J	C
		3	0	0	0	3
PC		SDG		4,9		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	---	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Introduce the basic structure and functional components of a computer system, including its evolution, Von Neumann architecture, and performance parameters.
2	Explain the internal organization of a basic computer, focusing on instruction formats, addressing modes, and the distinction between CISC and RISC architectures.
3	Explore arithmetic and logic unit (ALU) operations including integer and floating-point computations.
4	Examine memory hierarchy, cache, and I/O system designs and their impact on performance.
5	Explore modern advancements in computer architecture, including multicore processors, parallel architectures, and multiprocessor systems with interconnection structures and synchronization techniques.

Course Outcomes:		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Apply computer organization concepts to explain the functional units, performance characteristics and processor architectures.	Ap
CO 2	Solve computational problems by applying arithmetic algorithms for addition, subtraction, multiplication, and division with accuracy and efficiency.	Ap
CO 3	Utilize the concepts of instruction execution, multiple bus organization, and control unit design to implement control logic using hardwired and microprogrammed approaches.	Ap

 Signature of BOS Chairman, IT

CO 4	Apply the principles of I/O mechanisms and memory subsystems to interpret data transfer processes and memory management in computer systems.	AP
CO 5	Use the principles of parallel processing and multicore architectures to explain data hazards, instruction hazards, and performance issues in modern computing systems	Ap

Course Content	
FUNDAMENTALS OF COMPUTER ORGANIZATION Organization and Architecture- Structure and Function- Functional Units-Basic Operations and Concepts-Bus Structure-Performance. Memory Locations and Addresses - Memory Operations - Instruction and Instruction Sequencing - Addressing Modes - Basic I/O Operations. Case Study: Evolution of Intel, ARM Architectures/Processor Families	7 Hours
COMPUTER ARITHMETIC Addition and Subtraction of Signed Numbers-Design of Fast Adders-Multiplication of Positive Numbers-Signed Operand Multiplication-Fast Multiplication-Integer Division-Floating Point Numbers and Operation.	11 Hours
BASIC PROCESSING UNIT	9 Hours

 Signature of BOS Chairman, IT

Fundamental Concepts - Execution of a Complete Instruction - Multiple Bus Organization - Hardwired Control – Microprogrammed Control – Microinstructions-Microprogram Sequencing-Wide Branch Addressing	
I/O AND MEMORY The I/O Subsystem, -Programmed I/O- I/O Interrupts -Direct Memory Access (DMA) - The Components of Memory System – RAM Structure: The Logic Designer’s Perspective – Memory Boards and Modules-Memory Hierarchy – The Cache- The Memory Subsystem.	9 Hours
PIPELING AND PARALLEL PROCESSING Basic Concepts - Data Hazards - Instruction Hazards – Influence on instruction sets - Data path and control considerations - Superscalar operation. Multiple Processor Organization-Types, Parallel Organization. Multicore Computers Introduction – Organization- Software and Hardware performance issues. Case Study: GPU Acceleration in Real-Time System.	9 Hours

Theory Hours: 45	Tutorial Hours: 0	Practical Hours: 0	Project Hours: 0	Total Hours: 45
-----------------------------------	------------------------------------	-------------------------------------	-----------------------------------	----------------------------------
