

**KUMARAGURU COLLEGE OF TECHNOLOGY,**  
An autonomous Institution affiliated to Anna University, Chennai  
**COIMBATORE – 641 049.**

**Curriculum and Syllabus for**  
**M. E. INDUSTRIAL AUTOMATION &  
ROBOTICS**  
**REGULATION 2024 A**

**I to IV SEMESTERS**

**Department of Mechanical Engineering**

## VISION

To achieve global recognition for the programs of the department by promoting innovation, sustainability, and leadership, contributing to the society

## MISSION

1. To promote innovation in Mechanical Engineering through curriculum, focusing on sustainability and ethical practices.
2. To create an active learning ecosystem for acquiring knowledge and skills in Mechanical Engineering.
3. To facilitate research in mechanical systems and sustainable technologies that have an impact on industry and society.

## PROGRAM EDUCATIONAL OBJECTIVES(PEOs):

- PEO1:** Graduates will be on roles in implementing cutting edge automation technologies by integrating intelligent system and driving advancements in industrial processes.
- PEO2:** Graduates will excel as professionals by applying concepts of industrial robotics and advanced engineering principles to develop innovative and sustainable solutions.
- PEO3:** Graduates will engage in lifelong learning as educators and researchers in the field of industrial automation.

## PROGRAM OUTCOMES (POs)

- PO1:** An ability to independently carry out research/investigation and development work to solve practical problems.
- PO2:** An ability to write and present a substantial technical report/document.
- PO3:** Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.
- PO4:** Apply advanced engineering techniques, modern automation tools, and emerging technologies to solve complex industrial problems efficiently.
- PO5:** To collaborate effectively in interdisciplinary teams, demonstrating leadership and ethical responsibility in automation and robotics projects.
- PO6:** An ability to continuously engage in lifelong learning and professional development to adapt to technological advancements in industrial automation and robotics.

|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The purpose of taking this course is to: |                                                                                                                                                                                      |
| 1                                        | To impart fundamental knowledge of Artificial Intelligence (AI) and intelligent agents, enabling students to understand AI-driven decision-making in industrial automation.          |
| 2                                        | To equip students with practical knowledge of machine learning and neural networks, allowing them to analyze and optimize automation processes.                                      |
| 3                                        | To develop AI-based solutions using deep learning and reinforcement learning techniques, fostering innovation in predictive maintenance, health monitoring, and smart manufacturing. |

| <b>Course Outcomes</b>                                                    |                                                                                                                          |                                              |
|---------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|
| After successful completion of this course, the students shall be able to |                                                                                                                          | <b>Revised Bloom's Taxonomy Levels (RBT)</b> |
| CO 1                                                                      | Apply the concepts of intelligent agents to analyze different agent architectures and their applications in automation.  | Ap                                           |
| CO 2                                                                      | Analyze various machine learning techniques to categorize and optimize automation processes.                             | An                                           |

|------------------------------------------|----------------------------------------------------------------------------------------------------------|
| The purpose of taking this course is to: |                                                                                                          |
| 1                                        | Understand the fundamentals, structure, and applications of CIM systems.                                 |
| 2                                        | Apply computer-based tools in design, manufacturing, and production planning.                            |
| 3                                        | Integrate various manufacturing activities using computer networks and control systems.                  |
| 4                                        | Explore the role of Flexible Manufacturing Systems (FMS), Robotics, and Automation in modern industries. |
| 5                                        | Analyze contemporary trends such as Industry 4.0, IoT, and Digital Manufacturing.                        |

| <b>Course Outcomes</b>                                                    |                                                                                                                           |                                              |

|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Introduction to CIM</b><br>Evolution, concept, and scope of CIM, Components and structure of CIM. Benefits and barriers to CIM implementation, CIM wheel, CIMOSA model, and Open System Architecture, Overview of hardware and software in CIM                                                                                                                                                                                                                                    | <b>9 Hours</b>  |
| <b>Computer Aided Design (CAD) and Computer Aided Manufacturing (CAM)</b><br>Role of CAD in CIM. Geometric modeling techniques: Wireframe, Surface, and Solid modeling. Data exchange standards (IGES, STEP). CNC machine control systems: NC, CNC, DNC concepts. Part programming: Manual and Computer-Aided (APT, G & M Codes) Tool path generation and post-processing.                                                                                                           | <b>9 Hours</b>  |
| <b>Group Technology (GT) and Process Planning</b><br>Concept and advantages of GT. Part classification and coding systems (Opitz, MICLASS) Production flow analysis and machine cell design. Computer-Aided Process Planning (CAPP): Retrieval and Generative systems. Integration of CAPP with CAD/CAM and MRP                                                                                                                                                                      | <b>9 Hours</b>  |
| <b>Flexible Manufacturing Systems (FMS) and Robotics</b><br>Components, configuration, and layout of FMS. Material handling and storage systems. FMS control strategies and scheduling. Industrial robots: Types, configurations, and applications. Robot programming, sensors, and vision systems.                                                                                                                                                                                  | <b>9 Hours</b>  |
| <b>CIM Networking, Production Control, and Emerging Trends</b><br>Computer networking in CIM environments. Data communication protocols and standards (MAP/TOP). Production Planning and Control (MRP, MRP II, ERP). Shop floor control and inventory management. Emerging concepts: Industry 4.0, IoT, Additive Manufacturing, Digital Twin, Smart Factories. Case studies of CIM applications.                                                                                     | <b>9 Hours</b>  |
| <b>Practical components</b> <ol style="list-style-type: none"> <li>3D Modeling Techniques using CAD Tools</li> <li>CNC Programming and Simulation</li> <li>CAM Tool Path Generation and Post-Processing</li> <li>Group Technology and Cell Layout Design</li> <li>Process Planning using CAPP Systems</li> <li>Flexible Manufacturing System (FMS) Simulation</li> <li>Robot Programming and Sensor Interfacing</li> <li>Smart Manufacturing with IoT and ERP Integration</li> </ol> | <b>15 Hours</b> |

|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>INTRODUCTION TO AUTOMATION:</b><br>Need, Types, Basic elements of an automated system, Manufacturing Industries, Types of production, Functions in manufacturing, Organization and information processing in manufacturing, Automation strategies and levels of automation. Hardware components for automation and process control, mechanical feeders, hoppers, orienters, high speed automatic insertion devices.                                                                              | <b>9 Hours</b> |
| <b>AUTOMATED FLOW LINES:</b> Part transfer methods and mechanisms, types of Flow lines, flow line with/without buffer storage, Quantitative analysis of flow lines.<br><b>ASSEMBLY LINE BALANCING:</b> Assembly process and systems assembly line, line balancing methods, ways of improving line balance, flexible assembly lines.                                                                                                                                                                 | <b>9 Hours</b> |
| <b>INTRODUCTION TO INDUSTRIAL ROBOTICS:</b> Classification of Robot Configurations, ROBOTICS: functional line diagram, degrees of freedom. Components common types of arms, joints grippers, factors to be considered in the design of grippers.<br><b>ROBOT ACTUATORS AND FEEDBACK COMPONENTS:</b> Actuators, Pneumatic, Hydraulic actuators, Electric & Stepper motors, comparison. Position sensors potentiometers, resolvers, encoders - velocity sensors, Tactile sensors, Proximity sensors.. | <b>9 Hours</b> |
| <b>KINEMATICS:</b> Homogenous transformation <b>MANIPULATOR KINEMATICS:</b> Homogenous transformations as applicable to rotation and transition - D-H notation, Forward inverse kinematics.<br><b>MANIPULATOR DYNAMICS:</b> Differential transformations, Jacobians, Lagrange Euler and Newton - Euler formations. Trajectory Planning: Trajectory Planning and avoidance of obstacles path planning, skew motion, joint integrated motion - straight line motion.                                  | <b>9 Hours</b> |
| <b>ROBOT PROGRAMMING:</b> Methods of programming requirements and features of programming languages, software packages. Problems with programming languages.<br><b>ROBOT APPLICATION IN MANUFACTURING:</b> Material Transfer Material handling, loading and unloading Process spot and continuous arc welding & spray painting - Assembly and Inspection.                                                                                                                                           | <b>9 Hours</b> |

|                                                                                                                                                                                                                                                                                                                                                                                                                            |           |                        |          |                         |          |                       |          |                     |           |

| <b>Course Objectives:</b>                |                                                                                                                                                           |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| The purpose of taking this course is to: |                                                                                                                                                           |
| 1                                        | To impart knowledge on the fundamentals of product development, including its significance, challenges, and organizational processes.                     |
| 2                                        | To enable students to analyze customer needs, generate design concepts, and evaluate product specifications for effective development..                   |
| 3                                        | To equip learners with skills to apply various design models, system-level planning, and embodiment design techniques for product architecture.           |
| 4                                        | To develop competencies in manufacturing planning, design management, and quality assurance to ensure robust and cost-effective production.               |
| 5                                        | To foster creativity in integrating intellectual property protection and economic strategies for successful project execution in industrial applications. |

| <b>Course Outcomes</b>                                                    |                                                                                                                                                                                         |                                              |
|---------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------|
| After successful completion of this course, the students shall be able to |                                                                                                                                                                                         | <b>Revised Bloom's Taxonomy Levels (RBT)</b> |
| CO1                                                                       | Apply the principles of product development to identify opportunities and plan pre-project activities.                                                                                  | Ap                                           |
| CO2                                                                       | Analyze customer needs and evaluate concept development methods for effective product design.                                                                                           | An                                           |

| Course Objectives:                       |                                                        |
|------------------------------------------|--------------------------------------------------------|
| The purpose of taking this course is to: |                                                        |
| 1                                        | To understand the fundamentals of Internet of Things   |
| 2                                        | To learn about the basics of IOT protocols             |
| 3                                        | To build a small low cost embedded system using IoT    |
| 4                                        | To apply the concept of IOT in the real world scenario |

| Course Outcomes                                                           |                                                                                                              |                                       |
|---------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|---------------------------------------|
| After successful completion of this course, the students shall be able to |                                                                                                              | Revised Bloom's Taxonomy Levels (RBT) |
| CO 1                                                                      | Apply the fundamental concepts and architecture of IoT to design basic industrial IoT solutions.             | Ap                                    |
| CO 2                                                                      | Understand various IoT Layers and their relative importance.                                                 | U                                     |
| CO 3                                                                      | Realize the importance of Data Analytics in IoT.                                                             | Ap                                    |
| CO 4                                                                      | Study various IoT platforms and Security                                                                     | Ap                                    |
| CO 5                                                                      | Design innovative industrial IoT applications by integrating various techniques for real-world case studies. | C                                     |
