

KUMARAGURU COLLEGE OF TECHNOLOGY,

An autonomous Institution affiliated to Anna University, Chennai

COIMBATORE – 641 049

B.E. ELECTRICAL AND ELECTRONICS ENGINEERING REGULATION 2024

I to VIII Semesters

**Department of
Electrical and Electronics Engineering**

VISION

To be a Centre of Excellence in Globalizing Education and Research in the field of Electrical and Electronics Engineering

MISSION

The Mission of the department is to

- Empower the students with state-of-art knowledge to excel as eminent electrical engineers with multi-disciplinary skills.
- Emphasize social values and leadership qualities to meet the industrial needs, societal problems and global challenges.
- Enable the technocrats to accomplish impactful research and innovations

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

Our graduates will be able to

PEO 1: Pursue a diverse range of careers in engineering, consultancy, and entrepreneurship.

PEO 2: Contribute to continuous professional development through higher studies and life-long learning.

PEO 3: Demonstrate their technical proficiency with ethical values and social responsibility.

PEO 4: Innovate and provide solutions for ever-changing global environments with familiarity in computational platforms in electrical engineering.

PROGRAM OUTCOMES (POs)

Our Graduates will be able to:

PO1: Engineering Knowledge: Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop to the solution of complex engineering problems.

PO2: Problem Analysis: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development. (WK1 to WK4)

PO3: Design/Development of Solutions: Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required. (WK5)

- PO4: Conduct Investigations of Complex Problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions. (WK8).
- PO5: Engineering Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems. (WK2 and WK6)
- PO6: The Engineer and The World:** Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment. (WK1, WK5, and WK7).
- PO7: Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws. (WK9)
- PO8: Individual and Collaborative Team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.
- PO9: Communication:** Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences
- PO10: Project Management and Finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.
- PO11: Life-Long Learning:** Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change. (WK8)

KNOWLEDGE AND ATTITUDE PROFILE (WK)

- WK1:** A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences.
- WK2:** Conceptually-based mathematics, numerical analysis, data analysis, statistics and formal aspects of computer and information science to support detailed analysis and modelling applicable to the discipline.
- WK3:** A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline.

- WK4:** Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline.
- WK5:** Knowledge, including efficient resource use, environmental impacts, whole-life cost, re- use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area.
- WK6:** Knowledge of engineering practice (technology) in the practice areas in the engineering discipline.
- WK7:** Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as the professional responsibility of an engineer to public safety and sustainable development.
- WK8:** Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues.
- WK9:** Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes.

PROGRAM SPECIFIC OUTCOMES (PSOs)

Our Graduates will be able to:

- PSO 1:** Apply the knowledge of Electrical Electronics and computer Engineering concepts to design, develop and analyze renewable and sustainable Energy systems.
- PSO 2:** Implement application-oriented engineering systems with the concepts of Electronic circuits, Embedded and Control systems

**B.E ELECTRICAL AND ELECTRONICS ENGINEERING
REGULATION AND CURRICULUM R2024
From 2024 Batch Onwards**

24HST101	தமிழர் மரபு / HERITAGE OF TAMILS (Common to all Departments)	L	T	P	J	C
		1	0	0	0	1
HS		SDG		4, 11, 16		
Pre-requisite courses		-		Data Book / Code book (If any)		-

Course Objectives:

The purpose of taking this course is to:

1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அம்சங்களை அறிமுகப்படுத்துதல், அதன் தொன்மைக்காலம் முதல் நவீனகாலம் வரையிலான வளர்ச்சியை விளக்கம் செய்யுதல். Introduce students to the foundational aspects of Tamil language and literature, tracing its evolution from ancient to modern times.
2	தமிழகத்தின் செழுமையான கலாச்சார பாரம்பரியத்தை அறிமுகப்படுத்துதல், பாறை ஓவியக் கலையிலிருந்து நவீன சிற்ப கலையின்படி அதன் கலை வெளிப்பாடுகளை ஆராய்தல். Familiarize students with the rich cultural heritage of Tamil Nadu, exploring its artistic expressions from rock art paintings to contemporary sculptures.
3	தமிழகத்தின் நாட்டுப்புறக் கலைகள் மற்றும் வீரவிளையாட்டுகளை அறிதல்-தினணக்கோட்பாடுகளை ஆராய்தல்- இந்திய தேசிய இயக்கத்தில் தமிழர்களின் பங்கினை அறிதல். To know the folk arts and heroic ames of Tamilnadu-explore the concept of thinai -to know the role of Tamils in Indian National movement.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	தமிழ் மொழி மற்றும் இலக்கியத்தின் அடிப்படை அறிவை மேம்படுத்துதல். மொழி பண்பாட்டில் எவ்வாறு இணைந்துள்ளது என்பதை உணர்தல். Enhance the fundamental knowledge of Tamil language and literature	U
CO2	பழங்கால பாறை ஓவியங்கள், சிற்பம் என கலைகள் நவீன காலம்வரை எவ்வாறு பயணிக்கிறது என்பதை புரிந்துகொள்ளுதல். Understand the heritage, rock art paintings to modern art sculpture	U
CO3	நாட்டுப்புறக் கலைகள் தற்காப்புக் கலைகளாகவும், உடல் ஆரோக்கியத்தை மேம்படுத்தும் விதமாகவும் அமைவதை அறிந்து கலைகள் மீதான ஆர்வத்தை அதிகரிக்கச் செய்தல்- தமிழர்களின் அகத்திணை, புறத்திணை கோட்பாட்டினை புரிந்து கொள்ளுதல். இந்திய பண்பாட்டில் தமிழர்களின் பங்களிப்பை அறிதல். Acquire essential knowledge in the folk and martial arts-understanding the Agam and puram concept- to know the contribution of Tamils in Indian culture.	Ap

Course Content

மொழி மற்றும் இலக்கியம்

இந்திய மொழிக் குடும்பங்கள் - திராவிட மொழிகள் - தமிழ் ஒரு செம்மொழி - தமிழ் செவ்விலக்கியங்கள் - சங்க இலக்கியத்தின் சமய சார்பற்ற தன்மை - சங்க இலக்கியத்தில் பகிர்தல் அறம் - திருக்குறளில் மேலாண்மைக் கருத்துக்கள் - தமிழ்க் காப்பியங்கள், தமிழகத்தில் சமண பௌத்த சமயங்களின் தொடக்கம் -பக்தி இலக்கியம், ஆழ்வார்கள் மற்றும் நாயன்மார்கள் - சிறிலக்கியங்கள் - தமிழில் நவீன இலக்கியத்தின் வளர்ச்சி - தமிழ் இலக்கிய வளர்ச்சியில் பாரதியார் மற்றும் பாரதிதாசன் ஆகியோரின் பங்களிப்பு.

3 Hours

LANGUAGE AND LITERATURE

Language Families in India - Dravidian Languages – Tamil as a Classical Language - Classical Literature in Tamil – Secular Nature of Sangam Literature – Distributive Justice in Sangam Literature - Management Principles in Thirukural - Tamil Epics and Impact of Buddhism & Jainism in Tamil Land - Bakthi Literature Azhwars and Nayanmars - Forms of minor Poetry - Development of Modern literature in Tamil - Contribution of Bharathiyar and Bharathidhasan.

மரபு - பாறை ஓவியங்கள் முதல் நவீன ஓவியங்கள் வரை - சிற்பக்கலை

நடுகல் முதல் நவீன சிற்பங்கள் வரை - ஐம்பொன் சிலைகள்- பழங்குடியினர் மற்றும் அவர்கள் தயாரிக்கும் கைவினைப் பொருட்கள், பொம்மைகள் - தேர் செய்யும் கலை - சுடுமண் சிற்பங்கள் - நாட்டுப்புற தெய்வங்கள் - குமரிமுனையில் திருவள்ளுவர் சிலை - இசைக் கருவிகள் - மிருதங்கம், பறை, வீணை, யாழ், நாதஸ்வரம் - தமிழர்களின் சமூக பொருளாதார வாழ்வில் கோவில்களின் பங்கு.

3 Hours

HERITAGE – ROCK ART PAINTINGS TO MODERN ART SCULPTURES

Hero stone to modern sculpture - Bronze icons - Tribes and their handicrafts - Art of temple car making - - Massive Terracotta sculptures, Village deities, Thiruvalluvar Statue at Kanyakumari, Making of musical instruments - Mridhangam, Parai, Veenai, Yazh and Nadhaswaram - Role of Temples in Social and Economic Life of Tamils.

நாட்டுப்புறக் கலைகள் மற்றும் வீர விளையாட்டுகள்

தெருக்கூத்து, கரகாட்டம், வில்லுப்பாட்டு, கணியான் கூத்து, ஓயிலாட்டம், தோல்பாவைக்கூத்து, சிலம்பாட்டம், வளரி, புலியாட்டம், தமிழர்களின் விளையாட்டுகள்.

3 Hours

FOLK AND MARTIAL ARTS

Therukoothu, Karagattam, Villu Pattu, Kaniyan Koothu, Oyillattam, Leather puppetry, Ciabatta, Valari, Tiger dance - Sports and Games of Tami

தமிழர்களின் திணைக்கோட்பாடுகள்

தமிழகத்தின் தாவரங்களும், விலங்குகளும் - தொல்காப்பியம் மற்றும் சங்க இலக்கியத்தில் அகம் மற்றும் புறக்கோட்பாடுகள் - தமிழர்கள் போற்றிய அறக்கோட்பாடு - சங்ககாலத்தில் தமிழகத்தில் எழுத்தறிவும், கல்வியும் - சங்ககால நகரங்களும் துறைமுகங்களும் - சங்ககாலத்தில் ஏற்றுமதி மற்றும் இறக்குமதி - கடல்கடந்த நாடுகளில் தமிழர்களின் வெற்றி.

3 Hours

THINAI CONCEPTS OF TAMIL

Flora and Fauna of Tamils & Aham and Puram Concept from Tholkappiyam and Sangam Literature - Aram Concept of Tamils - Education and Literacy during Sangam Age - Ancient Cities and Ports of Sangam Age - Export and Import during Sangam Age - Overseas Conquest of Cholas.

இந்திய தேசிய இயக்கம் மற்றும் இந்திய பண்பாட்டிற்குத் தமிழர்களின் பங்களிப்பு

இந்திய விடுதலைப் போரில் தமிழர்களின் பங்கு - இந்தியாவின் பிறப்பகுதிகளில் தமிழ்ப் பண்பாட்டின் தாக்கம் - சுயமரியாதை இயக்கம் - இந்திய மருத்துவத்தில், சித்த மருத்துவத்தின் பங்கு - கல்வெட்டுகள், கையெழுத்துப்படிக்கள் - தமிழ்ப் புத்தகங்களின் அச்ச வரலாறு. CONTRIBUTIONS OF TAMIL TO INDIAN NATIONAL MOVEMENT AND INDIAN CULTURE Contribution of Tamils to Indian Freedom Struggle - The Cultural Influence of Tamils over the other parts of India – Self-Respect Movement - Role of Siddha Medicine in Indigenous Systems of Medicine – Inscriptions & Manuscripts – Print History of Tamil Books.	3 Hours

Course Content:														
MATRICES Eigenvalues and Eigenvectors of a real matrix – Properties of eigenvalues and eigenvectors – Cayley Hamilton theorem (excluding proof) - Orthogonal matrices – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation.													9 Hours	
Practical Component Introduction to MATLAB - Matrix Operations - Addition, Multiplication, Transpose, Inverse and eigenvalues and eigenvectors of higher order matrices. Characteristic equation of a Matrix and Cayley-Hamilton Theorem.													6 Hours	
FUNCTIONS OF SEVERAL VARIABLES Total derivative – Taylor’s series expansion – Maxima and minima of functions of two variables – Constrained maxima and minima: Lagrange’s multiplier method with single constraints – Jacobians.													9 Hours	
Practical Component Determining Maxima and Minima of a function of one variable. Determining Maxima and Minima of a function of two variables													6 Hours	
MULTIPLE INTEGRALS Double integration in Cartesian coordinates – Change of order of integration - Triple integration in Cartesian coordinates – Applications: Area as double integral and Volume as triple integral.													9 Hours	
Practical Component Double Integral and Area as double integral Triple Integral and Volume as triple integral													6 Hours	
VECTOR CALCULUS Gradient, divergence and curl – Directional derivative – Irrotational and Solenoidal vector fields - Green’s theorem in a plane, Gauss divergence theorem and Stoke’s theorem (excluding proofs) – Verification of theorem and simple applications.													9 Hours	
Practical Component Evaluating gradient, divergence and curl. Verifying Green’s theorem in the plane													6 Hours	
ANALYTIC FUNCTIONS Functions of a complex variable – Analytic functions – Necessary and sufficient conditions in Cartesian coordinates, Cauchy- Riemann equations (excluding proofs).													4 Hours	
Practical Component Check analyticity using Cauchy-Riemann equations													3 Hours	
COMPLEX INTEGRATION Cauchy’s integral theorem – Cauchy’s integral formula –Singularities –Residues – Residue theorem –Application of residue theorem for evaluation of real integrals – Contour Integration (excluding poles on the real axis).													5 Hours	
Practical Component Perform contour integration around a circular contour													3 Hours

Course Content														
ADVANCED ELECTROCHEMICAL ENERGY SYSTEMS Introduction to electrochemistry for energy systems - Advanced battery technologies (Li-ion batteries, Sodium-ion batteries, Al – air Battery, Zn - air batteries) - Comparison of battery technologies and its challenges. Hybrid energy storage systems: Super-capacitors: Electric double-layer capacitors (EDLCs) - Pseudo capacitors - Hybrid supercapacitors Fuel cells: Principles and recent advancements of Proton exchange membrane fuel cells (PEMFCs) - Solid oxide fuel cells (SOFCs) - Microbial fuel cells - Regenerative fuel cells.													9 Hours	
Practical Component: - Compare the Conductivity of different electrolytes in battery systems. - Determination of electrical conductivity in electroplated metal coating on substrate. - Determination of electrode potentials of the cell and construct feasible cell. - Estimation of mixture of acids using strong base by Conductometric titrations.													12 Hours	
ORGANIC MATERIALS FOR ELECTRONIC APPLICATIONS Introduction to polymers - Classification - Functionality - Degree of Polymerization. Polymerization: Addition polymerization and its Mechanism (Free Radical, Cationic, and Anionic) - Condensation polymerization – Copolymerization Conducting materials: Small molecule conductors (Pentacenes and their derivatives) - Engineered Pentacenes and Reversible functionalization - Synthesis and doping of conducting polymers (Polyacetylene and Polythiophene) - Applications of conducting materials in devices (Organic light-emitting diodes (OLEDs), Organic photovoltaics, Flexible and printed electronics)													9 Hours	
Practical Component: Determination of molecular weight of polymer using Viscometric method.													3 Hours	
INSULATING AND HIGH-RESISTIVITY MATERIALS IN ELECTRONICS Insulating materials in electronics: Introduction (Importance and Key properties) - Classification (Solid, liquid, and gas insulators) - Properties (Dielectric properties and breakdown) - Preparation, properties, and uses of Solid inorganic (Mica and Porcelain) and organic insulators (Bakelite and Rubber) - Liquid insulators (Epoxy resin and Transformer oil) – Gas Insulator (Sulfur hexafluoride) High Electrical resistivity materials: Factors influencing electrical resistivity - High resistivity materials (Composition, properties, and applications of Manganin and Molybdenum disilicide) - Nanocomposite insulators													9 Hours	
Practical Component: Determination of pH and Conductivity in different Transformer Oils													3 Hours	
NANOMATERIALS AND NANOELECTRONICS Introduction to nano chemistry - Distinction between molecules, nanoparticles, and bulk materials - Size-dependent properties of nanomaterials - Quantum confinement effects - Carbon nanotubes and graphene (Preparation by Chemical Vapor Deposition and Laser Ablation, Properties and Applications in electronics) - Nanowires (Preparation by Electrochemical Deposition and Electrospinning, Properties and Applications in electronics) – Nanoparticles, nanoclusters, and nanorods (Preparation by Sol-gel, Solvothermal, Properties and Applications in electronics) - Nanotubes and nanowires in sensing applications.													9 Hours	

Practical Component: Synthesis of Nanoparticle using Solvo-Thermal Method					3 Hours				
GREEN CHEMISTRY AND SUSTAINABLE ELECTRONICS Introduction to sustainable electronics (Importance and Environmental challenges in the electronics industry) - Environmental impact (Conductors, semiconductors, and polymers), Toxicity and persistence of electronic materials - Green chemistry principles in electronics manufacturing (12 principles of green chemistry applied to electronics and Eco-friendly materials and processes) - Life cycle assessment of electronic products - Recycling and e-waste management strategies (Recovery, Challenges and innovations in electronics recycling) - Future trends in eco-friendly electronic materials.					9 Hours				
Practical Component: - Determination of Copper from electronic waste by Complexometric method. - Estimation of copper ion by spectrophotometry. - Estimation of strength of sulphuric acid in spent Battery Electrolytes by pH metry					9 Hours				
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

24MEI103	COMPUTER AIDED – ENGINEERING GRAPHICS (Common to EE, EC, EI, BT)	L	T	P	J	C
ES		2	0	2	0	3
		SDG		9, 12		

Pre-requisite courses	-	Data Book / Code book (If any)	-
------------------------------	----------	---------------------------------------	----------

Course Objectives:	
The purpose of taking this course is to:	
1	understand the fundamental principles of engineering graphics and their significance.
2	develop proficiency in freehand sketching, usage of drawing instruments, and lettering.
3	gain competency in using computer graphics technologies for graphical communication, including isometric views and various coordinate systems (absolute, relative, polar)

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	apply the principles of engineering graphics to create accurate orthographic and isometric projections	Ap
CO2	design free-hand sketches of orthographic views from pictorial representations to improve spatial understanding and communication of engineering concepts	C
CO3	apply CAD software tools to create, edit, and annotate technical drawings and analyse them using ISO and ANSI standards	Ap
CO4	analyse the parametric and non-parametric CAD models, producing detailed two-dimensional documentation, including sectional views and annotations.	An
CO5	apply geometric and topological concepts to design 3D models for additive manufacturing.	Ap
CO6	apply the principles of engineering graphics to create accurate orthographic and isometric projections	Ap

Course Content	
Introduction to Engineering Drawing Principles of Engineering Graphics and their significance, Freehand sketching, usage of Drawing instruments, lettering, Conic sections including the Rectangular Hyperbola (General method only); Cycloid, Epicycloid, Hypocycloid and Involute.	6 Hours
Orthographic and Isometric Projections	6 Hours

Principles of Orthographic Projections-Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions; Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa, Conventions.	6 Hours
Overview of Computer Graphics Listing the computer technologies that impact on graphical communication, Isometric Views of lines, Planes, Simple and compound Solids, Coordinates system - Absolute Coordinates, Relative Coordinates, Polar Coordinates.	6 Hours
Customization & CAD Drawing Setting up modules and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerancing; Orthographic constraints, Snap to objects manually and automatically; Isometric Projections and Solids.	6 Hours
Annotations, layering & other functions Layers to create drawings, create, edit and use customized layers; orthographic projection techniques; Drawing sectional views of composite right regular geometric solids and projecting the true shape of the sectioned surface; Drawing annotation, Computer-aided design (CAD) software modeling of parts and assemblies. Part editing and two-dimensional documentation of models, Shape extractions (Freeform modelling). Planar projection theory includes sketching of perspective, isometric, Multiview, auxiliary, and section views. Spatial visualization exercises – Transformation, Rendering and Lighting. Geometry and topology of engineered components: Introduction to Additive manufacturing (AM); Exporting the 3D model.	4 Hours 8 Hours
Theory Hours: 30	Tutorial Hours: 0
Practical Hours: 30	Project Hours: 0
Total Hours: 60

24EEI101	ELECTRIC CIRCUITS AND NETWORKS	L	T	P	J	C
		3	0	2	0	4
ES		SDG		7, 9, 12		

Pre-requisite courses	-	Data Book / Code book (If any)	-
------------------------------	----------	---------------------------------------	----------

Course Objectives:	
The purpose of taking this course is to:	
1	equip students with essential knowledge of electric circuits and networks, focusing on their principles, analysis techniques, and design methodologies.
2	establish a robust foundation in circuit analysis that is essential for learning advanced Electrical and Electronics courses.
3	provide students with the necessary skills to design and implement electrical networks and enhance their problem-solving and design skills.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	analyse and interpret the behaviour of electric circuits by applying circuit laws	An
CO2	apply mesh analysis/ nodal analysis / network theorems to analyse the behaviour of the given Electric circuit	Ap
CO3	analyse the transient response of first order and second order systems to step and sinusoidal input	An
CO4	apply phasor diagram techniques to represent and analyse the voltages and currents in three-phase systems.	Ap
CO5	analyse the frequency response of series and parallel RLC circuits and explain the behaviour of magnetically coupled circuits.	An
CO6	simulate, demonstrate and analyse various electrical circuits using fundamental laws, theorems, and design techniques.	Ap

Course Content	
BASIC CIRCUIT ANALYSIS Fundamentals concepts of R, L and C Elements-Energy Sources - Ohm's Law - Kirchhoff 's Laws - DC Circuits - Resistors in series and parallel circuits - A.C Circuits	9 Hours

- Average and RMS Values - Complex Impedance - Phasor diagram - Analysis of Series and Parallel Circuits: Real Power, Apparent Power Reactive Power and Power Factor. Practical Component • Experimental verification of series and parallel electric circuits using fundamental laws. • Measurement of Real and Reactive power in AC circuits.		6 Hours							
NETWORK REDUCTION AND THEOREMS Source transformation - star delta conversion - Mesh and Nodal analysis - Network Theorems: Superposition, Thevenin’s and Norton’s Theorem - Maximum power transfer theorem - Duality Principle. Practical Component • Simulation and Experimental Verification of Mesh Analysis. • Simulation and Experimental Verification of Thevenin’s theorem. • Simulation and Experimental Verification of Superposition theorem. • Simulation and Experimental Verification of Maximum Power transfer theorem.		9 Hours 12 Hours							
TRANSIENT RESPONSE ANALYSIS Introduction - Transient response of RL, RC and RLC circuits using Laplace transform for Source free, Step input and Sinusoidal input. Practical Component • Simulation of RL, RC and RLC Circuit Transients.		9 Hours 3 Hours							
RESONANCE AND COUPLED CIRCUITS Series and parallel resonance - Frequency response - Quality factor and Bandwidth - Introduction to Magnetic circuits - Comparison of Magnetic and Electric circuits – Self and Mutual inductance - Coefficient of coupling - Dot convention - Analysis of coupled circuits. Practical Component • Design and Implementation of Series and Parallel Resonance Circuit.		9 Hours 6 Hours							
THREE PHASE CIRCUITS Phase Sequence - Line and Phase Quantities - Three Phase Star and Delta Connections - Phasor diagram of voltages and currents - Analysis of Three Phase Circuits with Star and Delta Connected Balanced and Unbalanced Loads - Power Measurement in Three Phase Circuits using Two Wattmeter Method - Power Factor Calculations. Practical Component • Measurement of Power and Power factor in Three Phase Balanced Circuit.		9 Hours 3 Hours

The purpose of taking this course is to:

1	introduces first-year engineering students to Design Thinking, focusing on practical, user-centered problem-solving techniques
2	empathize with users, generate ideas, and create models to test and refine their solutions
3	understand iteration, empathy, and critical reflection to cultivate a creative mindset

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply problem-solving techniques and the Design Thinking process to engineering problems using simple models	Ap
CO 2	understand user needs through various empathy techniques and develop/refine models iteratively based on user insights.	U
CO 3	reflect critically on their learning journeys and the emotional demands of problem-solving. Collaborate effectively in teams to develop innovative solutions	Ap

Course Content

Introduction to Problem Solving and Ground Rules Introduction to problem-solving strategies without mentioning Design Thinking-Emphasize problem-solving attitudes, mindsets, and behaviours necessary for iterative problem solving (e.g., openness to failure, patience, empathy)-Set ground rules for the course, including incentives for creative risk-taking and penalties for non-participation or lack of reflection-Overview of the Design Thinking process and its importance.	6 Hours
Empathy and Problem Definition	

Techniques for understanding user needs, including observation, interviews, surveys and focus groups -Importance of secondary research as a complement for the above-mentioned methods-Introduction to empathy cycles: involve students in two empathy cycles before and after problem definition-Finetuning problem definition based on user insights.	6 Hours
Ideation and Concept Modelling Brainstorming ideas and selecting feasible solution-Creating concept modelling to visualize ideas-Include an empathy cycle after students propose solutions, allowing them to revisit and reshape their solutions based on further insights from users.	6 Hours
Prototyping and Testing with Models Building basic prototypes using simple materials (e.g., cardboard, clay)- Introduction to different prototyping methods (e.g., low-fidelity vs high-fidelity models) for different contexts: product design, space design, policy, and digital/e-commerce solutions-Conduct an empathy cycle after the prototype is developed to gather user feedback and refine the prototype.	6 Hours
Iteration and Final Modelling Project Students refine their prototypes based on feedback from the empathy cycle-Finalize prototypes for presentation based on consistent feedback loops.	6 Hours
Presentation, Reflection, and Learning Summaries Students present their final projects and reflect on their learning journeys, including how their understanding of problem-solving and empathy evolved during the course- Learning Summary Activity: Each student presents their individual journey and learning outcomes from the empathy cycles and iterations-Peer review and group discussions.	6 Hours

Theory Hours:	0	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	30

24HST102	தமிழரும் தொழில்நுட்பமும்/ TAMILS AND TECHNOLOGY	L	T	P	J	C
HS		1	0	0	0	1
		SDG		4, 8		
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	தமிழர்களின் நெசவு மற்றும் பானைத் தொழில்நுட்பத்தை அறிமுகப்படுத்துதல், சங்க கால கட்டிட தொழில்நுட்பத்தை விளக்குதல், கோயில்கள் மற்றும் சிற்பக்கலைகளை ஆராய்தல். introducing weaving and pottery technology of Tamils -Explaining the building technology of the Sangam Period-Explore temples and sculptures.
2	கப்பல், இரும்பு, நாணயங்கள், மணி உருவாக்கும் தொழிற்சாலைகள், ஆகியவற்றை விளக்கம் செய்தல், தமிழகத்தின் தொல்லியல் சான்றுகளின் பழமையை உணர்த்துதல். explain Ship, Iron, Coins, Beads Making Factories. Realizing the Antiquity of Archaeological Evidence of Tamil Nadu
3	வேளாண்மை மற்றும் அறிவியல் தமிழைப் பற்றி அறிதல், இணையத்தில் தமிழின் தேவையை உணர்த்துதல்,தமிழ் மென்பொருள்களை அறிமுகம் செய்தல். knowledge of Agricultural and Scientific Tamil, Realizing the need for Tamil on the Internet, Introducing Tamil software.

Course Outcomes:

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	தமிழர்களின் நெசவு மற்றும் பானைத் தொழில்நுட்பத்தின் முக்கியத்துவத்தினை அறிந்து கொள்ளுதல். சங்ககால தமிழர் வளர்த்த அழகுக் கலைகளைத் தெரிந்து கொள்ளுதல். know the importance of weaving and pottery technology of Tamils-To know the Aesthetics arts developed by Sangam Tamils	U
CO 2	கப்பல் கட்டும் கலை, இரும்புத் தொழிற்சாலை, நாணயங்கள் அச்சடித்தல்,மணி உருவாக்கும் தொழிற்சாலைகள், சிலப்பதிகாரத்தில் உள்ள மணிகளின் வகையை அறிதல். knowledge of ship building, ironworks, coinage, minting, and beads making factories,Knowing the types of beads in Silapathikaram.	U
CO 3	வேளாண்மை மற்றும் நீர்ப்பாசன தொழில்நுட்பத்தை அறிந்து கொள்ளல். அறிவியல் தமிழ் மற்றும் கணினித் தமிழைப் புரிந்து கொள்ளுதல். know agriculture and irrigation technology. Understanding Scientific Tamil and Computer Tamil.	Ap

Course Content

நெசவு மற்றும் பாணைத் தொழில்நுட்பம்:

சங்க காலத்தில் நெசவுத் தொழில் - பாணைத் தொழில்நுட்பம் - கருப்பு சிவப்பு பாண்டங்கள் - பாண்டங்களில் கீறல் குறியீடுகள்.

Weaving Industry during Sangam Age - Ceramic technology - Black and Red Ware Potteries (BRW)-Graffiti on Potteries.

3 Hours

வடிவமைப்பு மற்றும் கட்டிடத் தொழில்நுட்பம்:

சங்க காலத்தில் வடிவமைப்பு மற்றும் கட்டுமானங்கள் ஸ்ர சங்க காலத்தில் வீட்டுப் பொருட்களில் வடிவமைப்பு - சங்க காலத்தில் கட்டுமான பொருட்களும் நடுகல்லும் - சிலப்பதிகாரத்தில் மேடை அமைப்பு பற்றிய விவரங்கள் - மாமல்லபுரம் சிற்பங்களும், கோவில்களும் - சோழர் காலத்துப் பெருங்கோயில்கள் மற்றும் பிற வழிபாட்டுத் தலங்கள் - நாயக்கர் காலக் கோயில்கள் - மாதிரி கட்டமைப்புகள் பற்றி அறிதல், மதுரை மீனாட்சி அம்மன் ஆலயம் மற்றும் திருமலை நாயக்கர் மஹால் - செட்டிநாட்டு வீடுகள் - பிரிட்டிஷ் காலத்தில் சென்னையில் இந்தோ-சாரோசெனிக் கட்டிடக் கலை.

Designing and Structural construction House & Designs in household materials during Sangam Age - Building materials and Hero stones of Sangam age Details of Stage Constructions in Silappathikaram - Sculptures and Temples of Mamallapuram - Great Temples of Cholas and other worship places - Temples of Nayaka Period - Type study (Madurai Meenakshi Temple)- Thirumalai Nayakar Mahal - Chetti Nadu Houses, Indo - Saracenic architecture at Madras during British Period.

3 Hours

உற்பத்தித் தொழில் நுட்பம்:

கப்பல் கட்டும் கலை - உலோகவியல் - இரும்புத் தொழிற்சாலை - இரும்பை உருக்குதல், எஃகு - வரலாற்றுச் சான்றுகளாக செம்பு மற்றும் தங்க நாணயங்கள் - நாணயங்கள் அச்சடித்தல் - மணி உருவாக்கும் தொழிற்சாலைகள் - கல்மணிகள், கண்ணாடி மணிகள் - சுடுமண் மணிகள் - சங்கு மணிகள் - எலும்புத்துண்டுகள் - தொல்லியல் சான்றுகள் - சிலப்பதிகாரத்தில் மணிகளின் வகைகள்.

Art of Ship Building - Metallurgical studies - Iron industry - Iron smelting, steel-Copper and gold- Coins as source of history - Minting of Coins - Beads making- industries Stone beads -Glass beads - Terracotta beads -Shell beads/ bone beads - Archeological evidence - Gem stone types described in Silappathikaram.

3 Hours

வேளாண்மை மற்றும் நீர்ப்பாசனத் தொழில் நுட்பம்:

அணை, ஏரி, குளங்கள், மதகு - சோழர்காலக் குழுவித் தூம்பின் முக்கியத்துவம்- கால்நடை பராமரிப்பு - கால்நடைகளுக்காக வடிவமைக்கப்பட்ட கிணறுகள்- வேளாண்மை மற்றும் வேளாண்மைச் சார்ந்த செயல்பாடுகள் - கடல்சார் அறிவு - மீன்வளம் - முத்து மற்றும் முத்துக்குளித்தல் - பெருங்கடல் குறித்த பண்டைய அறிவு - அறிவுசார் சமூகம்.

Dam, Tank, ponds, Sluice, Significance of Kumizhi Thoompu of Chola Period, Animal Husbandry - Wells designed for cattle use - Agriculture and Agro Processing - Knowledge of Sea - Fisheries - Pearl - Conche diving - Ancient Knowledge of Ocean - Knowledge Specific Society.

3 Hours

அறிவியல் தமிழ் மற்றும் கணித்தமிழ்:

அறிவியல் தமிழின் வளர்ச்சி - கணித்தமிழ் வளர்ச்சி - தமிழ் நூல்களை மின்பதிப்பு செய்தல் - தமிழ் மென்பொருட்கள் உருவாக்கம் - தமிழ் இணையக் கல்விக்கழகம் - தமிழ் மின் நூலகம் - இணையத்தில் தமிழ் அகராதிகள்- சொற்குவைத் திட்டம். Development of Scientific Tamil - Tamil computing- Digitalization of Tamil Books- Development of Tamil Software - Tamil Virtual Academy - Tamil Digital Library - Online Tamil Dictionaries - Sorkuvai Project.	3 Hours

Course Objectives:	
The purpose of taking this course is to	
1	enhance students' abilities to communicate ideas effectively, both orally and in writing, by developing skills in organizing thoughts clearly and logically and expressing them through well-structured paragraphs and concise summaries.
2	enable students to critically evaluate and synthesize information from multiple sources and utilize suitable writing techniques and formats to produce professional-quality content tailored to various contexts.
3	foster active listening, critical reading, and reflective thinking, empowering students to create engaging, relevant, and informative content by applying effective communication strategies across diverse platforms.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	demonstrate proficiency in delivering ideas effectively, both in speaking and writing, with a deeper understanding of the content and the ability to convey complex ideas through well-structured paragraphs and summaries.	Ap
CO2	create and present original content by evaluating information from multiple sources and employing appropriate formats and writing strategies across various professional contexts.	C
CO3	produce engaging and informative content through active listening, reading, reflection, and effective communication skills.	E

		3	0	2	0	4
BS		SDG	7, 9			
Pre-requisite courses		-		Data Book / Code book (If any)		-

Course Objectives:	
The purpose of taking this course is to:	
1	understand the fundamental concepts and methods for solving linear ordinary differential equations (ODEs) of second and higher order, and apply them to real-world engineering problems such as electric circuits.
2	develop proficiency in using Laplace Transform techniques to solve ODEs, particularly in scenarios involving constant coefficients, and apply these methods to practical engineering systems.
3	gain expertise in the application of various numerical methods, including Taylor's series, Euler, Improved Euler, and Runge-Kutta methods, to solve initial value problems for ODEs with a focus on accuracy and efficiency.
4	master the methods of solving partial differential equations (PDEs), including separation of variables and standard techniques for first-order and higher-order PDEs, and understand their application in modeling physical phenomena.
5	apply and evaluate finite difference and other numerical techniques for solving complex engineering problems involving PDEs, such as two-dimensional Laplace's and Poisson's equations, as well as one-dimensional heat and wave equations.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	solve linear ordinary differential equations (ODEs) of second and higher order, including applications in electric circuits.	Ap
CO 2	apply Laplace Transform techniques to solve linear ODEs.	Ap
CO 3	apply numerical methods, including Taylor's series, Euler, Improved Euler, and Runge-Kutta methods, to solve initial value problems for ODEs.	Ap
CO 4	analyse and solve partial differential equations (PDEs) using separation of variables and standard methods for first-order PDEs and higher-order linear homogeneous PDEs.	An
CO 5	apply finite difference techniques to solve two-dimensional Laplace's and Poisson's equations and use numerical schemes to solve one-dimensional heat and wave equations.	Ap
CO 6	analyze and solve complex real-world engineering problems using a variety of analytical and numerical methods for ordinary and partial differential equations.	An

Course Content									
ORDINARY DIFFERENTIAL EQUATIONS Linear equations of second and higher order with constant coefficients – Euler’s and Legendre’s linear equations – Method of variation of parameters – First order Simultaneous linear equations with constant coefficients – Applications: Electric Circuits.								9 Hours	
Practical Component: - Solving Second-Order Linear ODEs with Constant Coefficients - Solving First-Order Simultaneous Linear Equations								7 Hours	
SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS USING LAPLACE TRANSFORMS: Laplace Transform – Properties – Inverse Laplace transforms – Properties – Solution of linear ordinary differential equations with constant coefficients.								9 Hours	
Practical Component: Using Laplace Transforms to Solve Linear ODEs								4 Hours	
NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS Initial value problems - Single step methods: Taylor’s series method – Truncation error – Euler and Improved Euler methods – Fourth order Runge–Kutta method – Multistep method: Milne’s predictor - corrector method.								9 Hours	
Practical Component: - Numerical Solution Using Taylor's Series Method - Numerical Solution Using Euler and Improved Euler Methods - Numerical Solution Using Fourth Order Runge-Kutta Method								9 Hours	
PARTIAL DIFFERENTIAL EQUATIONS: Solution of PDE by variable separable method - solution of standard types of first order partial differential equations (excluding reducible to standard types) - Lagrange’s linear equation – Linear homogeneous partial differential equations of second and higher order with constant coefficients.								9 Hours	
Practical Component: Solution of PDE by Variable Separable Method								4 Hours	
NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS: Finite difference techniques for the solution of two-dimensional Laplace’s and Poisson’s equations on rectangular domain–Solution of one-dimensional heat equation using Bender Schmidt and Crank Nicholson difference schemes –Solution of one-dimensional wave equation by explicit scheme.								9 Hours	
Practical Component: - Numerical Solution of Two-Dimensional Laplace’s and Poisson’s Equations - Numerical Solution of Heat Equation Using Bender-Schmidt and Crank-Nicholson Methods.								6 Hours	
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

		3	0	2	0	4
BS		SDG	9			
Pre-requisite courses	Higher Secondary	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	discover the fundamental concepts of light-matter interactions, including emission, absorption, and Einstein's theory's presentation of stimulated emission's quantum mechanical foundations.
2	comprehend the principles of quantum mechanics, including wave-particle duality, the significance of the wave function, and quantum tunnelling.
3	examine various sources of green energy, including solar, wind, and ocean energy, and assess their efficiency and practical applications.
4	study the properties of semiconductors, magnetic materials, including carrier concentration, transport phenomena, and applications of the Hall effect in sensors.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply the principles of applied optics to demonstrate the operation of laser systems and their applications.	Ap
CO 2	apply quantum mechanical concepts to solve problems related to wave-particle duality and quantum tunnelling.	Ap
CO 3	apply principles of green energy technologies to assess their efficiency and practical applications.	Ap
CO 4	Understand semiconductor physics concepts to analyze carrier transport phenomena and properties of semiconductor devices.	U
CO 5	apply knowledge of magnetic materials to evaluate their properties and uses in modern applications like spintronics.	Ap
CO 6	apply optics, quantum physics, green energy, and semiconductor physics methods to design practical solutions in experimental setups.	Ap

Course Content

APPLIED OPTICS	9 Hours
-----------------------	----------------

Interaction of light and matter - Quantization of electromagnetic radiation – Absorption, Spontaneous emission and Stimulated emission - Einstein's theory of stimulated emission- Population inversion - Sources of excitation - Active medium -Laser beam output- Nd-YAG laser - CO₂ laser - Applications – Laser Imaging, Holography and Laser gyroscopes. Practical Component - Semiconductor laser: - Determination of wavelength of laser - Determination acceptance angle and numerical aperture of an optical fibre. - Determination of particle size - Spectrometer – Determination of wavelength of mercury source using grating	6 hours
QUANTUM PHYSICS Necessity of quantum mechanical picture - Planck's concept (hypothesis) - Wave-particle duality - de-Broglie waves - Physical significance of wave function - Schrodinger equation (Time independent and time-dependent) - Particle in a box- Eigen values and Eigen function- Superposition Principle - Quantum mechanical tunnelling through a barrier Practical Component - Compound pendulum – Determination of acceleration due to gravity - Determination of Planck's constant–electroluminescence method.	9 Hours 6 hours
GREEN ENERGY Introduction to Green energy – Solar energy: Energy conversion by photovoltaic principle – Solar cells – Efficiency measurements – Types (First, Second and Third Generation) - Wind energy: Basic components and principle of wind energy conversion systems – Ocean energy: Wave energy – Wave energy conversion devices. Futuristic Energy: Hydrogen – Methane Hydrates – Carbon capture and storage (CCS). Practical Component - Determination of efficiency of solar cell - Melde's string – Determination of frequency of a tuning fork	9 Hours 6 hours
SEMICONDUCTOR PHYSICS Semiconductors - Intrinsic and extrinsic semiconductors - Variation of carrier concentration with temperature and impurity concentration - Carrier transport in Semiconductors: Drift, mobility and diffusion – Hall Effect in Semiconductors – Applications of Hall Effect - Magnetic field sensor, current sensor, and position sensor - Ohmic contacts: concept and importance - Schottky diode – construction and working - energy band diagram, I-V characteristics. Practical Component - Determination of band gap of a semiconductor - Determination of thermal conductivity of a bad conductor – Lee's Disc method - Non-uniform bending – Determination of Young's modulus	9 Hours 6 hours
MAGNETIC MATERIALS Introduction – Bohr magneton - types of magnetic material – Hysteresis behaviour – Energy product - Hard and soft magnetic materials - Magnetic Anisotropy- Spintronics and Magnetic Semiconductors- Applications – GMR - MRAM (Magnetoresistive Random Access Memory) - Nanomagnetic Materials - Magnetocaloric Materials – Magnetic Materials in Renewable Energy – Magnetic levitation. Practical Component Determination of magnetic susceptibility of a solid material – B-H curve apparatus	9 Hours 6 hours

24CSI101	LOGICAL THINKING AND PROBLEM SOLVING (Common to all Programmes)	L	T	P	J	C
		3	0	2	0	4
ES		SDG	8, 9			
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:	
The purpose of taking this course is to:	
1	gain a comprehensive understanding of computing systems, including their classification, processing units, memory structures, storage hierarchies, and the essential functions and types of operating systems
2	develop strong logical and analytical thinking skills, enabling the systematic analysis and solution of computational problems using reasoning techniques, algorithms, and flowcharts.
3	acquire a solid foundation in C programming, mastering the use of data types, operators, control structures, and input/output operations to create efficient and effective programs.
4	apply advanced programming techniques, including the use of arrays, structures, pointers, and functions, to solve complex real-world problems with a focus on modular and efficient coding practices.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	understand the basic concepts of hardware, software, Operating systems, and the logic behind the functioning of the Computing systems.	U
CO2	apply logical thinking and reasoning to solve computing problems using tools like algorithms and flowcharts.	Ap
CO3	understand the structured programming paradigms, memory organization and how the language can be used as a tool to solve problems.	U
CO4	develop simple programs using data types, operators, control structures, pointers, and functions as appropriate in real world applications.	Ap

Course Content	
FUNDAMENTALS OF COMPUTERS AND COMPUTING Generations of computers, and classification of computers (supercomputers, mainframes, minicomputers, microcomputers). Processing Units (CPU, GPU, TPU), memory (RAM, ROM), storage devices and hierarchy, input / output and peripheral devices. System software, application software. Operating Systems - Functions (process	6 Hours

management, memory management, file system management, device management, security), types of operating systems (desktop, mobile, networking, distributed, real-time, embedded). Number Systems: Introduction to different number systems (binary, octal, decimal, hexadecimal), conversions between number systems, and binary arithmetic (addition, subtraction, multiplication, division).					4 Hours				
Practical Component Exploring hardware and software components									
LOGICAL THINKING, REASONING AND TOOLS Problem Analysis – Logical Thinking vs Critical Thinking vs Design Thinking - Inference – Inductive Reasoning – Deductive Reasoning – Logical Thinking Tools: Algorithms: Definition and importance, characteristics of algorithms (finite, clear and unambiguous, well-defined inputs and outputs, feasible). Algorithm representation Techniques: Pseudocode, stepwise refinement, and top-down design. Flowcharts: Symbols used in flowcharts, creating flowcharts, and examples of flowchart-based problem-solving.					8 Hours				
Practical Component Algorithm writing and Flowcharts,					4 Hours				
PROGRAMMING PARADIGMS AND INTRODUCTION TO C PROGRAMMING Programming Paradigms: Structured programming - functional programming - object-oriented programming. Introduction to C Programming: History of C - features of C - structure of a C program – input / output statements. Data Types: Primitive data types (int, char, float, double) - derived data types, typecast. Operators: Arithmetic operators - relational operators - logical operators - bitwise operators - assignment operators - operator precedence. Conditional Statements: If - if-else - nested if - switch-case. Looping Statements: For loop - while loop - do-while loop. Pre-processor Directives and Command line arguments, Storage Classes.					11 Hours				
Practical Component Programs on Operator precedence, Decision Making, Iterations					10 Hours				
ARRAYS AND STRUCTURES Collections: Arrays – 2D Arrays – String Manipulation. Structures and Unions: Definition - declaration - accessing members - differences between structures and unions - applications.					10 Hours				
Practical Component Programs on Arrays, Structures, Union,					6 Hours				
POINTERS AND FUNCTIONS Pointers: Definition - declaration - pointer arithmetic - pointers and arrays. Functions: Definition - declaration - types of functions (user-defined, library functions) - parameter passing (by value, by reference) pointers and functions, recursion.					10 Hours				
Practical Component Pointers and Functions. Additional programs on Files to be discussed.					6 Hours				
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

Course Objectives:

The purpose of taking this course is to:

1	foster a comprehensive understanding of the implications of electrostatics and magnetostatics in engineering applications.
2	develop the ability to analyze the properties of conductors and dielectrics, focusing on current density and boundary conditions.
3	impart analytical skills to investigate the principles of electrostatics, magnetostatics and electromagnetic wave propagation.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	evaluate the electric field intensity for various types of charges using basic electrostatic laws and to recognize different co-ordinate systems.	An
CO 2	analyze the electrostatic boundary conditions and evaluate capacitance of various configurations.	An
CO 3	apply basic laws of magnetostatics to determine magnetic field intensity and magnetic flux density.	Ap
CO 4	apply the knowledge of magnetic fields and inductance to calculate inductances of solenoids, toroidal cores and analyze the magnetic boundary condition.	Ap
CO 5	analyze the concepts of electrodynamics & electromagnetic waves and to derive the Maxwell's equations.	An

Course Content													
DIODES AND THEIR APPLICATIONS Structure, operation and VI Characteristics of PN junction diode, Zener diode - Diffusion and transition capacitances of PN junction diode - LEDs and Photo diodes - Applications of diodes: Clippers and Clampers - Half wave and Full wave rectifiers with filter - Zener voltage regulator.												6 Hours	
Practical Component - Design of Clipper and Clamper circuit. - Half wave and full wave rectifiers with filter. - Design of Voltage regulator using Zener diode.												9 Hours	
BJT AND MOSFET BJT - Structure, operation and VI characteristics - Load line, Quiescent point, CE, CB and CC configurations - Biasing: Fixed base bias, voltage divider bias, emitter bias - BJT as a switch. MOSFET - Structure, operation and VI characteristics - Enhancement and Depletion modes - Biasing of MOSFET: CS configuration - BJT vs MOSFET.												10 Hours	
Practical Component - Characteristics of BJT under CE configuration. - Characteristics of MOSFET under CS configuration.												6 Hours	
SMALL SIGNAL AMPLIFIERS USING BJT AND MOSFET BJT small signal model, Analysis of CE amplifier - Gain and frequency response - MOSFET small signal model: Analysis of CS Amplifier and Source follower, Gain and frequency response - High frequency analysis of BJT and MOSFET.												10 Hours	
Practical Component - Frequency response of CE amplifier. - Frequency response of CS amplifier.												6 Hours	
MULTISTAGE, DIFFERENTIAL AND TUNED AMPLIFIERS RC coupled amplifier, Differential amplifier - Common mode and Difference mode analysis, CMRR - Tuned amplifiers: Single tuned and double tuned - Gain and frequency response.												9 Hours	
Practical Component Analysis of RC coupled amplifier.												3 Hours	
LARGE SIGNAL AMPLIFIERS AND OSCILLATORS Advantages of negative feedback - Voltage, Current, Series, Shunt feedback amplifiers - Power amplifiers: Class A, Class B and Class C amplifiers - Analysis of Class B push-pull power amplifier. Positive feedback - Conditions for oscillations, RC phase shift, Wien bridge Hartley, Colpitts and Crystal oscillators.												10 Hours	
Practical Component - Analysis of Class B push-pull power amplifier. - Design of RC phase shift oscillator.												6 Hours	
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

Course Content

INTRODUCTION TO OPEN-SOURCE TOOLS AND TECHNIQUES Explore the concept of open-source, its underlying principles and its contrast with proprietary software, Discuss the advantages of using open-source tools, such as lower costs, increased innovation, educational value, and community support, walk through to the commonly used open-source tools for electronics design (KiCad, FreeCAD), software development (Python, Eclipse), and fabrication (Cura, LinuxCNC).	3 Hours
ELECTRONICS FUNDAMENTALS AND TOOLS Introduction to basic electronic components (resistors, capacitors, transistors, etc.), Understanding of electronic circuits and their functions, Hands-on practice with CircuitJS and Falstad, Simulating and analysing electronic circuits, Introduction to Arduino and Raspberry Pi, exploring their capabilities and applications, Designing PCBs using KiCad and EasyEDA, Understanding PCB fabrication processes	6 Hours
SOFTWARE PROTOTYPING AND TOOLS Benefits of rapid prototyping in product development, Iterative design and testing, Wireframing tools (Balsamiq, Figma), UI design tools (Sketch, Figma), Programming	6 Hours

languages (Python, JavaScript), Testing frameworks (Selenium), No-code platforms (Bubble, Adalo, Wix, AppGyver), Building functional prototypes without extensive coding					
FABRICATION AND PROTOTYPING Overview of fabrication techniques (3D printing, laser cutting, CNC machining), Prototyping methods for physical products, using tools like Blender, TinkerCAD, or Fusion 360, Creating 3D models for physical prototypes, Hands-on experience with laser cutting and engraving, Understanding their applications and limitations					7 Hours
SIMULATION & DEMONSTRATION Integrated project demonstration, explaining the design process, technical choices, and outcomes, simulation showcase to demonstrate their understanding of various technical tools and prototyping techniques					8 Hours
Theory Hours:	0	Tutorial Hours:	0	Practical Hours:	30
				Project Hours:	0
				Total Hours:	30

		0	0	2	0	1
HS		SDG		3, 4		

Pre-requisite courses	Holistic Wellness-I	Data Book / Code book (If any)	-
------------------------------	----------------------------	---------------------------------------	----------

Course Objectives:	
The purpose of taking this course is to:	
1	build on the foundation laid in Holistic Wellness -I and deepening into the practices and principles of holistic wellness.
2	explore advanced techniques in mental, emotional, and spiritual well-being, with an emphasis on creating sustainable wellness habits.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	apply advanced techniques in mindfulness, meditation, and stress management.	Ap
CO 2	understand the role of community and social connections in wellness.	U
CO 3	develop resilience and adaptability in maintaining wellness.	E
CO 4	refine and sustain a personalized holistic wellness plan.	E

Course Content	
ADVANCED MINDFULNESS AND MEDITATION: - Deepening mindfulness practices for enhanced mental clarity. - Exploring different forms of meditation (e.g., guided, transcendental, movement-based). - Hands-on activity: Daily meditation practice and journaling reflections.	6 Hours
EMOTIONAL RESILIENCE AND MENTAL HEALTH: - Building emotional resilience through positive psychology practices. - Cognitive-behavioural strategies for managing stress and anxiety. - Hands-on activity: Developing and practicing a resilience toolkit.	6 Hours
SOCIAL AND ENVIRONMENTAL WELLNESS: - The impact of social connections and community on wellness. - Creating a supportive environment for personal growth. - Hands-on activity: Building a community wellness project or group activity.	6 Hours
INTERNAL GROWTH AND PURPOSE:	6 Hours

- Exploring the deeper aspects of internal wellness and self-actualization. - Reflective practices for discovering life purpose and meaning. - Hands-on activity: Creating a vision board or personal mission statement.					
SUSTAINING WELLNESS PRACTICES: - Strategies for maintaining wellness habits over the long term. - Adapting wellness plans to life changes and challenges. - Hands-on activity: Revising and finalizing a long-term personal wellness plan.					6 Hours
Theory Hours:	0	Tutorial Hours:	0	Practical Hours:	30

								3	0	2	0	4		
BS		STATISTICS (Common to EE, EI)						SDG		3, 8				
Pre-requisite courses			-			Data Book / Code book (If any)			Statistical Table					
Course Objectives:														
The purpose of taking this course is to:														
1	introduce the concept of random variables and their probability theory.													
2	provide knowledge on probability distributions, correlation, and regression analysis.													
3	apply hypothesis testing for small and large sample data.													
4	explain the principles of experimental design and analysis of variance.													
5	expose students to statistical quality control tools and their applications in industrial processes.													
Course Outcomes														
After successful completion of this course, the students shall be able to											Revised Bloom's Taxonomy Levels (RBT)			
CO 1	categorize and illustrate different types of random variables and the concepts of probability, conditional probability, and Bayes' theorem											An		
CO 2	apply standard discrete and continuous distributions such as Binomial, Poisson, and Normal distributions to real-life statistical problems.											Ap		
CO 3	analyze and interpret the correlation and regression relationships for discrete data.											An		
CO 4	test the hypothesis using Z and Chi-square tests for large sample data and t and F tests for small sample data.											An		
CO 5	make use of ANOVA techniques in experimental design and interpret the results.											Ap		
CO 6	construct and interpret control charts for process monitoring.											Ap

PROBABILITY AND RANDOM VARIABLES					10 Hours
Axioms of probability – Conditional probability – Total probability – Bayes’ theorem Random variable – Distribution function – properties – Probability mass function Probability density function					
Practical Component					6 Hours
• Introduction to R programming • Application of descriptive statistics – Mean, Median, Mode and standard deviation					
CORRELATION AND STANDARD DISTRIBUTIONS					11 Hours
Correlation (Discrete Data): Karl Pearson’s Correlation coefficient - Regression lines (Discrete Data) - Binomial, Poisson and Normal distributions					
Practical Component					8 Hours
• Applications of Correlation and Regression • Application of Normal distribution					
TESTING OF HYPOTHESIS					9 Hours
Testing of hypothesis for large samples (single mean, difference of means) – Small sample tests based on t and F distributions (single mean, difference of means, paired t-test and variance ratio test) – Chi-square test for independence of attributes and goodness of fit					
Practical Component					6 Hours
• Application of Student – t test • Application of F test • Application of Chi-square test					
DESIGN OF EXPERIMENTS					9 Hours
Analysis of Variance (ANOVA) – Completely Randomized Design (CRD) – Randomized Block Design (RBD) – Latin Square Design (LSD).					
Practical Component					6 Hours
• ANOVA – one way classification • ANOVA – two-way classification					
STATISTICAL QUALITY CONTROL					6 Hours
Concept of process control - Control charts for variables: Mean and Range charts – Control charts for attributes: p, np, c – charts.					
Practical Component					4 Hours
• Control charts for variables (mean and range chart)					
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30

24EEI201	DC Machines and Transformers										L	T	P	J	C
PC											2	0	2	0	3
											SDG		7, 9, 12		
Pre-requisite courses			24EEI101				Data Book / Code book (If any)				-				
Course Objectives:															
The purpose of taking this course is to:															
1	impart a strong theoretical foundation in the operating principles and construction of DC Machines and Transformers.														
2	equip students with analytical and practical skills in conducting tests, evaluating performance, interpreting data, and diagnosing issues in machines and transformers.														
3	familiarize students with modern and sustainable trends in DC machine operation and application areas like EVs and drones.														
Course Outcomes															
After successful completion of this course, the students shall be able to												Revised Bloom's Taxonomy Levels (RBT)			
CO 1	Apply the fundamentals of Electromagnetic induction to examine the construction, working principle, and load behaviour of conventional and modern DC Machines.												Ap		
CO 2	Analyze torque-speed behaviour, speed control methods, and braking techniques of DC motors for efficient motion control.												An		
CO 3	Assess the steady-state and dynamic performance of single-phase transformers under various operating conditions.												Ap		
CO 4	Apply selection criteria and control strategies for DC machines in applications such as electric mobility, renewable energy systems, and industrial automation.												Ap		
CO 5	Examine the operational suitability and energy efficiency of transformer configurations through real-time case studies and smart grid applications.												An		
CO 6	Conduct and interpret laboratory experiments and simulations on DC machines and transformers to validate theoretical concepts and performance parameters.												An

Course Content						
DC MACHINES – EVOLUTION FROM CLASSICAL TO SUSTAINABLE MACHINES				10 Hours		
Fundamentals of DC Machines – DC Machine as Generator and Motor – Generated EMF and Back EMF – Torque Equation – Types of DC Machines: Shunt and Series – Characteristics – Speed Control of DC Motor - Types of Starters – Armature Reaction - Mechanical vs. Electronic Commutation – Introduction to Sustainable Materials in DC Machines – Emerging Technologies: Introduction to BLDC motors, Hybrid DC Generators and Coreless DC Motors.						
Practical Component				12 Hours		
- Energy Efficiency Assessment of a DC Shunt Motor using Brake Test - Dynamic Load Response Analysis of a DC Series Motor for Traction Applications - Loss Segmentation and Efficiency Benchmarking in a DC Shunt Motor						
TRANSFORMERS – FUNDAMENTALS TO FIELD APPLICATIONS				10 Hours		
Construction and Working Principle of Power Transformers – EMF Equation – Transformer on No Load and Load: Phasor Diagrams – Voltage Regulation – Equivalent Circuit - Parallel Operation of Transformers –Auto Transformers: Introduction and Applications						
Practical Component				8 Hours		
- Load Testing and Voltage Regulation of a Single-Phase Transformer - Open Circuit and Short Circuit Test on a Single-Phase Transformer						
CASE STUDIES IN DC MACHINES AND TRANSFORMERS				10 Hours		
IEEE & IEC Standards for Machines and Transformers – Performance-based Motor Selection for Paper Mills, Steel Plant, Rolling Mills and Drone Applications- Losses and Efficiency Calculations.						
Case Study: DC Motors in Indian Metro Traction – Regenerative Braking						
Case Study: Speed Control Techniques for DC Motors - Battery-operated Rickshaws						
Case Study: DC Generators in Renewable Energy Systems (Off-grid Solar & Wind)						
Practical Component				10 Hours		
- Performance Profiling of a DC Shunt Generator under Varying Load Dynamics - Speed Control of DC Shunt Motor - Study of Digital Twin and Smart Transformer monitoring using IoT/Simulation Tools						
Theory Hours:	30	Tutorial Hours:	30	Practical Hours:	30	Total Hours:
						60

Course Objectives:	
The purpose of taking this course is to:	
1	impart a fundamental knowledge on principles and operation of various electrical measuring instruments used for quantifying electrical parameters.
2	provide students with analytical skills in solving various configuration of bridge circuits, for the precise measurement of resistance, inductance, and capacitance.
3	equip students with the knowledge and skills to design and implement basic data acquisition systems using transducers and sensors.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Apply the principles of various electrical measuring instruments to quantify electrical parameters in different applications.	Ap
CO 2	Analyze different DC and AC bridges to determine unknown resistance, inductance, and capacitance	An
CO 3	Interpret the characteristics and applications of various transducers for specific applications	An
CO 4	Illustrate the operation of data acquisition systems and smart sensors.	Ap
CO 5	Demonstrate the use of digital instruments for real-time electrical measurements.	Ap
CO 6	Demonstrate the use of sensors in laboratory experiments and develop application-based projects	An

Course Content									
MEASUREMENT OF ELECTRICAL QUANTITIES								10 Hours	
Functional elements of an instrument – Standards, errors and calibration - PMMC Ammeter: Working principle – Measurement of high voltage and high current using Instrument Transformers – Digital Instruments: Digital Voltmeter -Dual slope DVM, Digital Ammeter, Multimeter & Energy meter, DSO – Digital frequency meter - Power quality analyzers.								6 Hours	
Case Study: Analysing Energy Export and Import of a solar panel using net metering									
Practical Component • Measurement of voltage, frequency, power factor using DSO • Measurement of Energy.									
RESISTANCE, INDUCTANCE AND CAPACITANCE MEASUREMENT								8 Hours	
DC bridges: Kelvin double bridge, Wheat stone bridge, Megger - AC bridges: Maxwell’s inductance bridge - Schering bridge - Wein bridge -LCR meter.								6 Hours	
Practical Component • Wheatstone Bridge for measurement of Resistance. • Schering Bridge for measurement of Capacitance.									
TRANSDUCERS AND APPLICATIONS									
Transducer: Classification and selection - Strain gauges - LVDT- Thermocouples – Thermistor - Piezo Electric Transducer - Ultrasonic Transducer -Speed measurement using Encoder - Hall effect sensor, Smart sensors – IOT based Data Acquisition Systems - Signal conditioning and telemetry -Basic concepts of MEMS and nano sensors.								12 Hours	
Practical Component • Temperature Transducer. • Measurement of displacement using LVDT. • Design Project: Applications of Sensor.								6 Hours	
12 Hours

24ECI203		Linear Integrated Circuits (Common to ECE, EEE, E&I)					L	T	P	J	C		
PC							3	0	2	0	4		
				SDG		3, 9							
Pre-requisite courses			24ECI102, 24EII101			Data Book / Code book (If any)			-				
Course Objectives:													
The purpose of taking this course is to:													
1	Introduce operational amplifiers, their structure, configurations, and characteristics.												
2	Enable the students to design and analysis of analog circuits using op-amps and special ICs.												
3	Equip the students to use the filters and waveform generators in appropriate applications.												
4	Provide the knowledge on Analog to Digital and Digital to Analog techniques.												
5	Equip the students to acquire practical skills through hands-on experiments with linear integrated circuits.												
Course Outcomes													
After successful completion of this course, the students shall be able to										Revised Bloom's Taxonomy Levels (RBT)			
CO 1	Describe op-amp structure, stages, and characteristics through basic experiments.										U		
CO 2	Analyze and implement inverting, non-inverting, and differential amplifiers using op-amps.										An		
CO 3	Analyze op-amp circuits such as adders, subtractors, integrators, differentiators, clippers, and clampers.										An		
CO 4	Design and evaluate filters and waveform generators using op-amps and IC 555.										C		
CO 5	Apply DAC and ADC techniques using R-2R, weighted resistor, flash, SAR, and dual-slope converters.										Ap		
CO 6	Evaluate voltage regulator ICs through experiments and analyse the working of PLLs and VCOs in frequency control and modulation.										E		
Course Outcomes (CO)	Program Outcomes (PO) (Strong-3, Medium – 2, Weak-1)											Program Specific Outcomes (PSO)

Course Content									
BASICS OF OPERATIONAL AMPLIFIERS Basics of Operational Amplifiers – Ideal Operational Amplifier – General operational amplifier stages and internal circuit diagrams of IC 741, DC and AC performance characteristics, Open and closed loop configurations – Voltage follower, Inverting amplifier, Non-inverting amplifier, Differential amplifier.								9 Hours	
PRACTICAL COMPONENT Inverting and non-inverting amplifiers								3 Hours	
APPLICATIONS OF OPERATIONAL AMPLIFIERS Adder and subtractor, Instrumentation amplifiers, V-to-I and I-to-V converters, Differentiators and Integrators, Precision rectifiers, Wave shaping circuits (Clipper and Clampers), Log and Antilog amplifiers, Analog voltage multiplier circuit and its applications, Comparators, Schmitt trigger.								9 Hours	
PRACTICAL COMPONENT - Adder and subtractor - Integrator and differentiator - Clipper and clamper								9 Hours	
FILTERS AND WAVEFORM GENERATORS Filters: Comparison between passive and active filters, Active filters: Low-pass, high-pass and band-pass filters – Waveform Generators: Sine, Square, Triangle, Sawtooth wave generators – IC 555 Timer: Monostable operation and its applications, Astable operation and its applications.								9 Hours	
PRACTICAL COMPONENT - Active filters - Waveform generation - Astable and Monostable multivibrators using IC 555 Timer								9 Hours	
DIGITAL TO ANALOG AND ANALOG TO DIGITAL CONVERTERS D/A converter: Specifications, Weighted resistor type, R-2R ladder type – Sample and hold circuit – A/D Converter: Specifications, Flash type, Successive Approximation type, Dual Slope type, Sigma-delta converter.								9 Hours	
PRACTICAL COMPONENT - Digital to Analog conversion - Analog to Digital conversion								6 Hours	
SPECIAL FUNCTION ICs IC Voltage regulators: Three terminal fixed and adjustable voltage regulators, IC 723 general purpose regulator, Monolithic switching regulator – Frequency to Voltage and Voltage to Frequency converters – PLL: Operation of PLL, Voltage Controlled Oscillator, PLL applications: AM and FM detection, FSK modulation and demodulation and frequency multiplier.								9 Hours	
PRACTICAL COMPONENT IC Voltage regulator								3 Hours	
Theory Hours:	45	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours:	75

24EEI203		DIGITAL SYSTEM DESIGN (Common to ECE, EEE, E&I)								L	T	P	J	C	
PC										3	0	2	0	4	
										SDG		9,12			
Pre-requisite courses			24ECI102 /24EII201					Data Book / Codes book (If any)			–				
Course Objectives:															
The purpose of taking this course is to:															
1	Impart foundational knowledge of number systems, binary codes, Boolean algebra, and logic simplification techniques.														
2	Develop analytical and practical skills in designing and implementing combinational and sequential circuits														
3	Build competency in digital system design using state machine, programmable logic devices like FPGA and Verilog HDL programming.														
Course Outcomes															
After successful completion of this course, the students shall be able to												Revised Bloom's Taxonomy Levels (RBT)			
CO 1	Apply number systems and Boolean algebra to design basic digital circuits.												Ap		
CO 2	Design and analyze the structure and functionality of various combinational circuits.												An		
CO 3	Interpret the logic flow of sequential circuits and analyze their performance under different design constraints.												An		
CO 4	Examine state transitions and circuit behaviour in synchronous sequential circuits using state diagrams and tables												An		
CO 5	Apply Verilog HDL constructs with various modelling styles to simulate and test digital logic circuits.												Ap		
CO 6	Develop, simulate and implement digital systems using logic gates and simulation tools												E		
	Program Outcomes (PO) (Strong-3, Medium – 2, Weak-1)											Program Specific Outcomes (PSO)			
	1	2	3	4	5	6	7	8	9	10	11				
Course Outcomes (CO)	Engineering Knowledge	Problem Analysis	Design/Development of Solutions	Conduct Investigations of Complex Problems	Engineering Tool Usage	The Engineer and The World	Ethics	Individual and Collaborative Team work	Communication	Project Management and Finance	Life-Long Learning	PSO-1	PSO-2		
CO1	3	1	1

CO5	2	2	2		2										
CO6	3	3	2		3			2	2						

Course Content					
FUNDAMENTALS OF DIGITAL SYSTEMS Review of number systems, Logic gates, Binary codes and code converters - Boolean algebra and theorems - Sum of Product and Product of Sum simplification - Canonical forms - minterm and maxterm - Simplification of Boolean expressions - Karnaugh map (upto 4 variables). Basic IC Terminologies, Characteristics of Digital Logic families: TTL, ECL and CMOS logic. Practical Component - Implementation of Boolean Function using Gates. - Implementation of code converters using K-map				9 Hours	
DESIGN OF COMBINATIONAL LOGIC CIRCUITS Design of Combinational Circuits: Adders, Subtractors, Parallel Adder, Carry Look Ahead Adder, Digital Comparator, Parity Generator/Checker, Encoder, Decoder, Multiplexer, De-Multiplexer, Implementation of Boolean function using Multiplexer. Practical Component - Design and implementation of Adder / Subtractor circuits. - Design of combinational circuit using MUX/DEMUX.				9 Hours	
SEQUENTIAL LOGIC CIRCUITS Latches and Flip Flops: SR, JK, T and D , Characteristic Equation, Excitation Table, Types of Triggering, Master Slave Flip Flop - Counters: Synchronous, Asynchronous Counter, Modulo-N Counter, Ring Counter - Shift Registers and its types. Practical Component - Design and implementation of Synchronous Counter. - Design and implementation of Asynchronous Counter.				6 Hours	
STATE MACHINE DESIGN AND FPGA Classification of Sequential Circuits: Moore and Mealy Model, Design of Synchronous Sequential Circuit: State Diagram, State Table, State Reduction, State Assignment, Hazards in sequential circuits - Introduction to PLD and FPGA architectures. Practical Component Design and implementation of synchronous sequential circuits				9 Hours	
VERILOG HDL PROGRAMMING Overview of Digital Design with Verilog HDL- Basic concepts- Modules and Ports- Gate-Level Modeling- Dataflow Modeling- Behavioral Modeling-Verilog HDL programming examples: gates, multiplexer, encoders, adders, flip flops, counters. Practical Component - Simulation of Combinational Logic using Verilog HDL - Simulation of Sequential Logic using Verilog HDL - Realization of simple digital module in FPGA				9 Hours	
Theory Hours:	45	Tutorial Hours:	30	Practical Hours:	75
				Project Hours:

ES												0	0	2	0	1
												SDG		4, 9		
Pre-requisite courses				-				Data Book / Code book (If any)				-				
Course Objectives:																
The purpose of taking this course is to:																
1	Develop a deep understanding of the innovation process and apply customer-centric thinking to innovation															
2	Evaluate the feasibility and viability of innovation ideas.															
3	Optimise innovation projects for efficiency and effectiveness and communicate the ideas effectively.															
Course Outcomes																
After successful completion of this course, the students shall be able to													Revised Bloom's Taxonomy Levels (RBT)			
CO1	Analyse the various stages of innovation and their interdependencies												An			
CO2	Create innovative solutions that address specific customer needs												C			
CO3	Evaluate the potential impact and risks of different innovation concepts and present them clearly and persuasively.												E			
Course Outcomes (CO)	Program Outcomes (PO) (Strong-3, Medium – 2, Weak-1)											Program Specific Outcomes (PSO)

3									2	3						
Course Content																
Idea Worth Prototyping Discuss potential risks and challenges associated with innovative ideas - Learn to refine and validate the initial concept - Develop a plan outlining key milestones and timelines for advancing from idea to prototype.													3 Hours			
Framing the Challenge Define the specific problem or opportunity that the innovation aims to address, understand customer needs and preferences - Identify the gaps in the market and potential obstacles to adoption, assess the potential market size, competition, and feasibility.													6 Hours			
Crafting High-Value Solutions Generate Minimum Usable Prototype (MUP) concepts that address the identified challenge that provide high value, evaluate the potential of each solution concept based on criteria like feasibility, viability, and desirability.													6 Hours			

Optimization and Planning Create Bill of Quantities (BOQ) and Bill of Materials (BOM) to estimate costs and resources - Develop a comprehensive innovation proposal outlining the innovation concept, goals, and benefits - Implement Lean principles to improve efficiency and reduce waste in the innovation process - Reflect on the activities to identify areas for improvement and learning.					7 Hours				
Project Presentation Develop and deliver a compelling presentation of your minimum usable prototype (MUP) and innovation solution to effectively communicate its value and impact to a broader audience - Create a visually engaging presentation that clearly outlines the problem, the proposed solution, and the value of your minimum usable prototype - Utilise tools such as slides, infographics, and videos to enhance the visual appeal - Craft a compelling story around your innovation - Highlight the journey from problem identification to solution development, emphasising key insights and milestones.					8 Hours				
Theory Hours:	0	Tutorial Hours:	0	Practical Hours:	30	Project Hours:	0	Total Hours	30

Course Content	
MODULE 1 Introduction to Group Discussions - Key skills for effective participation - Phases in a GD - Conversational Phrases in GD. Group Dynamics - Understanding group roles and dynamics - Conflict resolution and management in groups - Techniques for fostering collaboration. Presentations - Introduction to Visual Aids and Technology in Presentations.	6 Hours

Delivery Techniques - Voice modulation and speech clarity - Body language and gestures – audience analysis. Handling Q&A Sessions - Preparing for audience questions - Techniques for handling difficult questions - Mock Presentation with Q&A sessions.	
MODULE 2 Factual Group Discussions: Focus on sharing and verifying accurate information on a given topic. Participants base their contributions on verifiable data and concrete evidence. Opinion-based / Argumentative Group Discussion: Encourages participants to express and defend their point of view on a topic. Evaluate different perspectives and build critical thinking skills.	6 Hours
MODULE 3 Case Study Group Discussion: Involves analyzing the complexities, identifying key issues, and developing insights or solutions based on the group's collective knowledge. Abstract Discussion: Deals with intangible concepts, ideas, or themes without concrete reference points. Encourages creative thinking and theoretical exploration.	6 Hours
MODULE 4 Impromptu Presentations: Participants speak on a given topic with little to no preparation. Helps develop quick thinking and effective communication skills. Informative Presentation: Aims to educate the audience on a specific topic by providing clear, factual information. The focus is on clarity, accuracy, and comprehensiveness. Demonstrative Presentation: Interactive sessions where participants engage in hands-on activities to learn practical skills. Often includes exercises, demonstrations, and collaborative tasks.	6 Hours
MODULE 5 Training and Technical Presentation: Designed to teach specific technical skills or procedures. Includes detailed instructions, demonstrations, and may involve technical jargon. Academic Presentation: Involves presenting research findings or theoretical concepts in an academic setting. Emphasizes clarity, evidence-based arguments, and adherence to scholarly standards. Pitch Presentation: A concise, persuasive presentation aimed at securing support, investment, or approval. Focuses on the value proposition, potential benefits, and unique selling points. Persuasive Presentation: Seeks to convince the audience to adopt a particular viewpoint or take a specific action. Utilizes logical arguments, emotional appeals, and credible evidence. Multimedia Presentations: Uses visual and auditory media to convey information and present arguments. Enhances engagement and aids in illustrating complex concepts.	6 Hours

Theory Hours:	-	Tutorial Hours:	-	Practical Hours:	2	Project Hours:	-	Total Hours:	30
----------------------	---	------------------------	---	-------------------------	---	-----------------------	---	---------------------	----

24EET205	GENERATION TRANSMISSION AND DISTRIBUTION	L	T	P	J	C
		3	0	0	0	3
PC		SDG		7, 9, 11,12		

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	Nil
------------------------------	------------	--	------------

Course Objectives:	The purpose of taking this course is to:
1	equip the students with the fundamental concepts, structure, and components of conventional and renewable electrical energy sources.
2	enable students to compute and analyze the performance parameters of transmission lines, insulators, and cables used in power systems.
3	Provide exposure to various distribution systems and power factor improvement methods in power system network.

Course Outcomes:	After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Illustrate the working principles, merits, and demerits of conventional power plants in different power generation scenarios.	U
CO 2	Apply the concepts of renewable energy sources, and hybrid energy systems for sustainable power generation.	Ap
CO 3	Compute transmission line parameters, models, efficiency, regulation, and corona effects for assessing system performance.	Ap
CO 4	Analyze the characteristics of overhead line insulators, cables and compute mechanical parameters like sag and tension	An
CO 5	Apply the principles of AC/DC distribution systems and power factor improvement techniques to power system networks.	Ap

Course Content

CONVENTIONAL POWER GENERATION Power system structure - Conventional sources of electrical energy: Working principles of thermal (coal, gas and diesel), Hydro-electric and Nuclear Power plants – Merits and Demerits.	9 Hours
RENEWABLE POWER GENERATION Need for renewable energy sources - Government initiatives and National Trends for renewable energy generation – Qualitative study of various renewable energy sources: Solar energy, Wind energy, Fuel cell, Hydrogen energy - Integration of solar energy system with grid.	9 Hours
TRANSMISSION LINES, MODELLING AND PERFORMANCE Types of Transmission - Transmission line parameters calculations: Inductance of a single phase two wire line and a three phase line with symmetrical spacing, Capacitance of a single phase line and a three phase line with equilateral spacing - Transmission line Models: Nominal T and π models – Performance Analysis of short and Medium transmission lines: Voltage Regulation, Transmission Efficiency - Bundled conductor - Transposition - Skin and proximity effects – Ferranti effect - Corona: Critical Disruptive Voltage, Power loss - Comparison of HVDC and HVAC Transmission.	9 Hours
MECHANICAL DESIGN OF OVERHEAD LINES Types of Insulators - Voltage distribution in suspension insulators – String efficiency - Stress and sag calculation – Effect of line sag and remedial action - Effects of wind and ice loading, Underground cables: Types of cables – Grading of cables – Insulation resistance.	9 Hours
DISTRIBUTION SYSTEMS Types of Distribution systems – Connection Scheme of Distribution System: Radial, Ring main and Interconnected System- Kelvin's Law- DC and AC distributor with concentrated load - Techniques of power factor improvement.	9 Hours

24EEI206	INDUCTION AND SYNCHRONOUS MACHINES	L	T	P	J	C
		3	0	2	0	4
PC		SDG		7, 9 & 12		

Pre-requisite courses	24EEI201	Data Book / Codes / Standards (If any)	Nil
-----------------------	----------	--	-----

Course Objectives:
The purpose of taking this course is to:

1	Equip the students with comprehensive understanding of the construction, operation, and performance of induction motors and synchronous machines, including energy-efficient classifications.
2	Build knowledge and practical skills in starting, speed control, and braking methods of induction motors and excitation control in synchronous machines through laboratory experiments and practical scenarios.
3	Provide deeper insight into voltage regulation, power Factor improvement, and performance characteristics of synchronous generators and motors using case studies and practical tests.

Course Outcomes:
After successful completion of this course, the students shall be able to
Bloom's Taxonomy Level (BTL)

CO 1	Analyze the construction, operation and performance of synchronous generators	An
CO 2	Interpret core features, operating characteristics and energy-efficient classifications of three-phase induction motors.	Ap
CO 3	Apply suitable starting, control, and braking methods for induction motors across typical industrial scenarios.	Ap
CO 4	Outline key features, operating behaviour, and starting methods of single-phase induction motors.	U
CO 5	Apply the principles of synchronous motors to analyse performance and improve power factor in practical situations.	Ap
CO 6	Perform experiments on induction and synchronous machines to determine performance parameters and correlate with theoretical models.	An

PC		SDG		9, 12		

Pre-requisite courses	24EEI203 (Common to ECE/EEE/EIE)	Data Book / Code book (If any)	-
------------------------------	---	---------------------------------------	----------

Course Objectives	
The purpose of taking this course is to:	
1	equip students with a foundational understanding of microcontroller fundamentals and embedded system architectures.
2	develop embedded C programming skills and build real-time and event-driven embedded applications
3	provide hands-on experience with microcontroller boards and tools, prepare students for embedded product development

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	interpret the fundamentals of embedded systems, basic micro controller/processor architectures used in modern applications.	U
CO2	examine the fundamentals of Embedded C programming by describing bare-metal program basics.	Ap
CO3	illustrate the CPU architecture, programmer model, operating modes, memory interface, and AMBA bus system of ARM Cortex.	U
CO4	apply the concepts of memory mapping and interface the GPIO and serial communication peripherals (UART, USART, I2C, SPI) in embedded system	Ap
CO5	collaborate and solve real-world problems to develop embedded system project case studies and evaluate the performance and effectiveness of the implemented prototypes.	C
CO6	demonstrate embedded system applications by implementing bare-metal programming in Embedded C, and peripheral interfacing using ARM Cortex-M4 processor through lab experiments.	E

COURSE CONTENT	
EMBEDDED SYSTEMS – OVERVIEW Definition, characteristics, and classification - Embedded system vs general-purpose system - Building Blocks of Embedded System and Hardware Components - Embedded product development lifecycle - Hardware and software co-design - Overview of microcontrollers, microprocessors - Development toolchain: cross-compilers linkers. Practical Components • Datasheet reference-based activity – Feature Comparison (8051/PIC Controller) • Control word and Register Configuration (ADC, TIMER, CAPTURE INTERRUPT) • Configuration of port pins based on datasheet pin diagram-GPIO- LED Blinking. • Makefile for C, flashing tools, debugging basics • Application domains* *With respect to the concerned discipline	6 Hours 10 Hours
EMBEDDED C PROGRAMMING Difference between C and Embedded C - Structure of an embedded C program - Header files - Data Types, Configuration files, startup files - Bare-metal programming – Device drivers, Bitwise Operations - Code, Data, BSS, Stack, Heap - Static vs global variables - Pointers and Arrays for Buffer Operations - Introduction to IDE. Practical Components using IDE • Write a simple delay loop program. (Bare Metal Programming Exercise) • Set/reset/toggle LED through bitwise operations and observe through watch window • Demonstrate pointer accesses and variables • Array access using indexing and pointer arithmetic • Role of Break points and static/global variables	8 Hours 10 Hours
MICROPROCESSOR ARCHITECTURE CPU architectures: CISC vs RISC Overview -ARM Cortex Architecture: Components - Instruction level registers and Special Function Registers - General Purpose Registers-Programmer model-operating modes. ARM memory interface - Advanced Microcontroller Bus Architecture (AMBA), Advanced Peripheral Bus (APB), Advanced Serial Bus (ASB) Practical Components • Data sheet Comparison – ARM Versions • Common Microcontroller Software Interface Standard (CMSIS) • Configure GPIO pins using CMSIS • Use of Cortex-M system timer for accurate delays. • Low-Level Bit Manipulation Exercises	10 Hours 10 Hours

COURSE CONTENT													
SIGNAL AND SYSTEMS												9 Hours	
Definition of Signals- Classification of Signals -Elementary Signals and Basic Operations –Introduction to Systems- Classification of Systems - Properties of Systems- Impulse Response Characterisation and Convolution (CT-LTI and DT-LTI)-System Representation Using Differential and Difference Equations – Applications: Smart home audio control systems.													
PRACTICAL COMPONENTS:												6 Hours	
- Standard signals, Mathematical operations on signals. - Convolution for CT and DT LTI systems and interpret outputs. - Simulation /modelling of LTI system using difference equations													
FOURIER ANALYSIS												9 Hours	
CT Fourier Series and CT Fourier Transform (CTFT)- Properties of CTFT and Frequency Response - DT Fourier Series and Discrete-Time Fourier Transform (DTFT) - Properties and Applications of DTFT													
PRACTICAL COMPONENTS:												6 Hours	
- Computation of CTFT and Fourier series synthesis - Fourier Series Representation of Musical Tones - Fault detection and Vibration analysis in Rotating Machines - Simulation													
Z-TRANSFORM												5 Hours	
Discrete-Time Complex Exponentials and Z-Transform - Region of Convergence and Properties - Inverse Z-Transform -Relationship between Z-Transform and Fourier Transform - Application to Solving Difference Equations													
PRACTICAL COMPONENTS:												4 Hours	
- Z-transform and inverse Z-transform computation - System analysis using Z-transform.													
DISCRETE FOURIER TRANSFORM												10 Hours	
Introduction to DFT and its Properties, and limitations- FFT Algorithms for Efficient Computation - Radix-2 FFT: DIT and DIF Algorithms - Butterfly Diagrams – Applications: FFT in speech recognition systems													
PRACTICAL COMPONENTS:												6 Hours	
- Power Quality analysis using FFT - FFT in speech recognition systems - ECG Heartbeat Frequency Detection -Simulation													
DESIGN OF DIGITAL FILTERS												12 Hours	
FIR Filter Design: Linear Phase and Windowing (Hamming, Hanning) - IIR Filter Design: Butterworth, Chebyshev - Impulse Invariant and Bilinear Transformation - FIR and IIR Structures: Direct Form I & II, Cascade, Parallel - Finite Precision Effects- Applications: Radar Signal Processing for Object Detection– Introduction to wavelet Transform.													

PRACTICAL COMPONENTS:	8 Hours
- FIR filter Design - IIR filter design - Radar Signal Processing for Object Detection -Simulation - Precision effects on filter stability and response

		1	0	2	0	2
HS		SDG	6, 13, 15			
Pre-requisite courses	-	Data Book / Code book (If any)			-	

Course Objectives:

The purpose of taking this course is to:

1	To introduce the importance, types, and conservation strategies of natural resources, with a focus on sustainable practices in water and food management.
2	To understand the structure and function of ecosystems and biodiversity, and explore the need for conservation through the study of hotspots and global environmental concerns.
3	To examine the causes and effects of environmental degradation, including pollution and waste management, and to promote mitigation strategies for sustainable development.
4	To provide knowledge of the legal and institutional frameworks for environmental protection in India and globally, including critical environmental acts and enforcement challenges.
5	To explore conventional and alternative energy resources, and to assess methods for energy conservation and carbon footprint reduction through audits and sustainability measures.

Course Outcomes

After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO1	Apply the concept of natural resource conservation to demonstrate sustainable practices	Ap
CO2	Analyse the structure, function, and adaptive capacity of ecosystems to categorize threats and conservation strategies for biodiversity.	An
CO3	Analyse various forms of environmental degradation and propose management and preventive solutions.	An
CO4	Apply national environmental laws and frameworks in the personal and professional contexts	Ap
CO5	Design strategies using renewable energy principles to develop sustainable energy utilization plans through audits and footprint analysis to transfer a healthy environment for future generations.	Ap

Course Content														
NATURAL RESOURCES													3 Hours	
Introduction to Natural resources : Types, significance, and conservation strategies														
Water resources: Utilization, management practices, and conservation strategies - rainwater harvesting methods.– Water distribution system audit														
Food resources: Challenges of food security in India - impact of modern agriculture, and environmental concerns related to fertilizers and pesticides.														
Practical Component:													10 Hours	
- Parameter Testing : Water / Effluent / Soil/Fertiliser - Simulation Experiments - Online Course														
ECOSYSTEM AND BIODIVERSITY													3 Hours	
Ecosystem: Structure and function of an ecosystem- ecosystem resilience and adaptive capacity														
Biodiversity: Values of biodiversity - Hot Spot of biodiversity (in the Himalayas, the Western Ghats, the Indo-Burma region, and the Gulf of Mannar) - Threats to biodiversity.														
Conservation Strategies: Emerging Issues in Biodiversity Conservation - Citizen science - In-situ and Ex-situ conservation of biodiversity.														
Practical Component:													Hours	
Documentation of biodiversity in the campus														
ENVIRONMENTAL DEGRADATION AND MANAGEMENT													3 Hours	
Pollution: Causes, effects and control measures of Air pollution, Water pollution - Role of an individual in prevention of pollution														
Waste management: Circular Economy vs. Linear Economy - Disposal of solid wastes - Treatment of Liquid wastes														
Disaster Management: Mitigation strategies and Readiness														
Practical Component:													6 Hours	
- Waste Management and Resource recovery in Campus - Documentation of Environmental Data Resources and Monitoring Tools.														
LEGAL FRAMEWORK FOR ENVIRONMENTAL PROTECTION IN INDIA													3 Hours	
Global and National Initiatives: United Nations Sustainable Development Goals - Coastal Regulation Zone - Environmental impact assessment														
Environmental Legislation in India: Key Legal and Regulatory Terminology in India – Valuation of Ecosystem Services and integration of Acts in the workplace - Plastic Waste Management Rules - E-Waste Management Rules - Environment Protection Act – Air (Prevention and Control of Pollution) Act – Water (Prevention and control of Pollution) Act – Wildlife Protection Act – Forest Conservation Act														
Implementation Challenges: Issues involved in enforcement of environmental legislation														
Practical Component:													2 Hours

	Course Content														
	IKS in Basic Sciences													3 hours	
	Study of ancient Indian concepts such as atomism (paramāṇu)- the five elements (Panchabhūta)- Exploration of alchemical practices, metallurgy-development of zero, decimal systems, algebra, and trigonometry - works by scholars such as Brahmagupta and Aryabhata-detailing planetary motions and timekeeping systems.														
	IKS in Civil Engineering													3 hours	
	Evolution from rock-cut caves to grand temples like Madurai Meenakshi and Brihadeeswarar.- Vastu Shastra- The Concept of “Mandala- Courtyard Design- Sacred Geometry- Panchabhuta-Chhatri- dome-shaped canopy- Prana Vayu- Shilpa Shastra- Sthapatya Veda- Kaalchakra-Brahmasthan.														

IKS in Mechanical Engineering Exploration of ancient metallurgical techniques-including ore extraction-alloying, furnace design-Vimana (Flying Machines) - Shakti (Energy Source) -Aerospace materials- Vimana Shapes -Ancient Navigation- Vedic Astronomy- Flight Principles in Nature- Matrika Systems-Indian shipbuilding techniques and navigation methods.				3 hours
IKS in Textile technology Introduction to Ancient Indian Textiles- Cultural and Historical Context -Traditional Dyeing Techniques-Weaving Techniques and Patterns-Khadi- -Natural Fibers and Materials- Cotton,Silk,Wool and Jute-Sustainable Practices and Eco-Friendly Technologies-Organic Cotton Farming-Recycling and Repurposing.				3 hours
IKS in medicine Ayurveda- Siddha Medicine- Rasa Shastra- Herbal Medicine- Nadi Pariksha- Chikitsa- Yoga and Pranayama- Surgical Techniques -Charaka Samhita - Sushruta Samhita— Panchagavya usage-Medicinal Plants and Herbal Remedies-Agricultural Practices and Crop Diversity-Sacred and Ritual Plants.				3 hours
Theory Hours: 15	Tutorial Hours: 0	Practical Hours: 0	Project Hours: 0	Total Hours: 15

Pre-requisite courses	Nil	Data Book / Codes / Standards (If any)	
-----------------------	-----	--	--

Course Objectives**:		The purpose of taking this course is to:
1	To familiarize students with various interview formats and equip them with essential techniques for effectively handling personal, behavioural, stress, and panel interviews.	
2	To develop self-awareness and career readiness by guiding students in analysing job roles, articulating career goals, and confidently presenting their skills and experiences.	
3	To enhance students' adaptability in diverse career pathways by exploring alternative job opportunities, entrepreneurial ventures, and global career options beyond traditional engineering roles.	

Course Outcomes***:		After successful completion of this course, the students shall be able to	Bloom's Taxonomy Level (BTL)
CO 1	Effectively navigate various interview formats by applying appropriate techniques for personal, behavioural, stress, and panel interviews, demonstrating confidence and professionalism in different interview scenarios.		Ap
CO 2	Exhibit career readiness and self-awareness by analysing job roles, articulating career aspirations, and presenting skills and experiences in alignment with employer expectations.		An
CO 3	Evaluate and explore diverse career pathways beyond traditional engineering roles, demonstrating adaptability in pursuing opportunities in entrepreneurship, global careers, public sector roles, and other emerging industries.		E

Course Content	
Career Awareness and Goal Setting - Exploring Varied Career Options Beyond Engineering - Industry Roles	6 Hours

• Startups and Entrepreneurial Ventures • Research Opportunities and Higher Education • Public Sector and Non-Profit Careers • Self-Assessment and Personal Reflection • Identifying Strengths, Weaknesses, Skills, and Career Aspirations • Setting Short-Term and Long-Term Career Goals	
Fundamentals of Interview Preparation • Analysing Company Background and Understanding Job Roles • Aligning Career Goals with Job Opportunities • Professional Etiquette and Appearance • Interview Dress Code, Grooming, and First Impression • Resume and Digital Profile Readiness • Types of interviews: personal, behavioural, stress, virtual, and panel	6 Hours
Behavioural Interviews – Responding with Purpose • Introduction to behavioural interviews: What and Why? • Common behavioural interview questions • The STAR technique (Situation – Task – Action – Result) • Identifying and reflecting on past experiences • Mapping soft skills to behavioural questions • Practicing concise storytelling • Active listening and adapting responses	6 Hours
Stress Interviews – Performing Under Challenging Situations • Understanding stress interviews: Purpose and setting • Types of stress tactics (rapid-fire questions, silence, disagreement, interruptions) • Strategies to stay composed and confident • Emotional regulation and response control • Maintaining clarity, tone, and respect under pressure • Practicing assertive and professional body language • Turning pressure moments into strengths	6 Hours
Panel Interviews • What is a panel interview? Structure and expectations • Understanding panel roles (HR, technical, managerial) • Techniques for engaging with a diverse panel • Managing eye contact, addressing questions, and body posture • Preparing multi-perspective answers • Handling follow-up or cross-questions • Strategies for closing the interview with impact	6 Hours

24EEI301	CONTROL SYSTEMS	L	T	P	J	C
		3	0	2	0	4
PC		SDG	7, 9, 12			
Pre-requisite courses	24EEI101/24ECI102	Data Book / Code book (If any)			--	

Course Objectives:	
The purpose of taking this course is to:	
1	Equip the students with ability to model and analyze dynamic systems using mathematical techniques in both time and frequency domains.
2	Develop competence in stability analysis and controller design, including compensators and PID controllers, for achieving desired system performance.
3	Enable students to utilize MATLAB-based simulation tools and explore contemporary control system applications for solving real-world engineering problems.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Develop mathematical models and derive transfer functions for physical systems	Ap
CO 2	Analyze the time response of first and second order systems and design P, PI, and PID controllers.	Ap
CO 3	Analyze system stability in frequency domain and design appropriate compensators for performance improvement.	An
CO 4	Investigate the stability of linear time-invariant systems using Routh-Hurwitz criterion and root locus techniques.	An
CO 5	Develop state space models of dynamic systems and apply the concepts of controllability and observability.	Ap
CO 6	Simulate, implement, and validate control system concepts using MATLAB/Simulink to analyze the behaviour of real-world systems.	An

Course Objectives:	The purpose of taking this course is to:
1	Equip the student with a foundational understanding of the structure, operation, and characteristics of power semiconductor devices along with associated gate driver and snubber circuits.
2	Provide theoretical and analytical skills to evaluate the performance of controlled rectifiers, choppers, inverters, voltage controllers and cycloconverters.
3	Impart practical knowledge on the operation of various power Electronics Converters

Course Outcomes:		
After successful completion of this course, the students shall be able to		Bloom's Taxonomy Level (BTL)
CO 1	Distinguish the operation, capabilities, characteristics of various power semiconductor devices and driver circuits.	Ap
CO 3	Analyze the operation of step-down and step-up chopper circuits used in DC–DC converters.	An
CO 2	Analyze the performance of AC-DC converter for different loads	An
CO 4	Apply voltage control techniques in inverter circuits for effective output regulation and waveform improvement	Ap
CO 5	Apply frequency control methods in AC-AC converters for various industrial and domestic applications.	Ap
CO 6	Analyze through simulation and practical implementation of various power electronic conversion circuits.	An

<u>Course Content</u>													
POWER SEMI-CONDUCTOR DEVICES Power diode, power BJT, SCR, Power MOSFET and IGBT: Structure, operation, and characteristics - Wide Bandgap Semiconductor devices: SiC and GaN- Gate Drive and Snubber circuits - Overview of Heat Sinks and Cooling Methods . Case Study: Data sheet study of IGBT/MOSFET, Safe Operating Area (SOA). Practical Component - Characteristics of SCR/MOSFET/SiC devices. - Design and Testing of Gate Drive Circuit.												9 Hours	
DC TO DC CONVERTERS Buck, boost, buck-boost converters - Isolated converter: forward and flyback topology-DC-DC Converters for PV systems - Two quadrant and four quadrant choppers - EV On-Board Charger (OBC): Dual Active Bridge (DAB) converter - Application of DC-DC converter: SMPS. Case Study: Bidirectional DC-DC converter for EV onboard chargers. Practical Component - Buck-Boost Converter - Simulation of DC-DC Converter for PV System with MPPT												9 Hours	
AC TO DC CONVERTERS Single phase, three phase half controlled and fully controlled converters - Effect of source inductance - Analysis of converters with R and RL loads - Performance parameters - Dual converters - PWM Rectifiers - Introduction to Power factor improvement technique - Applications of AC to DC converters. Case Study: Vienna rectifier for an EV charger. Practical Component - Single phase Fully Controlled Converter - Simulation of power factor correction circuits												9 Hours	
DC TO AC CONVERTERS Single phase and three phase bridge voltage source inverters - Voltage and frequency control: Sinusoidal PWM and Space Vector PWM (SVPWM) - harmonic reduction - LCL filter - harmonic standard (IEEE 519)- Current source inverter - Concept of multi-level inverter: Cascaded H-Bridge multi-level inverter. Case study: Datasheet of Inverters in various Industrial UPS. Practical Component - Single-Phase Voltage Source Inverter with PWM Control - Multilevel Inverter: Harmonic analysis using power logger												12 Hours	
AC TO AC CONVERTERS Single phase bidirectional voltage controller with RL load - Phase control - PWM control - single phase and three phase cyclo-converters - Introduction to Matrix Converter - Applications of AC to AC converter. Case Study: On load Transformer Tap Changers Practical Component												6 Hours	
												6 Hours	

• Single phase bi-directional AC Voltage Controller • Frequency control using AC-AC converter

Course Content													
POWER SYSTEM MODELLING & LOAD FLOW ANALYSIS												12 Hours	
Basic components of power system – Single line diagram – Impedance and reactance diagram – Per unit system – Bus classification – Formation of Y-bus matrix – Load flow analysis using Gauss-Seidel and Newton-Raphson methods.													
Practical Component												6 Hours	
- Formation of Y-bus matrix using MATLAB - Load flow analysis using Newton-Raphson method using ETAP													
FAULT ANALYSIS												12 Hours	
Types of faults – Symmetrical faults – Formation of Z-bus – Case study: Calculation of symmetrical fault current – Unsymmetrical faults – Symmetrical components – Sequence networks – Analysis of LG, LL faults.													
Practical Component												3 Hours	
Symmetrical and Unsymmetrical fault analysis using ETAP.													
POWER SYSTEM STABILITY												7 Hours	
Concept of stability – Steady state and transient stability – Swing equation – Equal area criterion – Critical clearing angle and time – Voltage stability – Introduction to power system security and reliability.													
Practical Component												6 Hours	
- Solution of swing equation using MATLAB. - Transient stability analysis using MATLAB.													
PROTECTIVE RELAYS AND SCHEMES												7 Hours	
Relays: classification and principles – Static and numerical relays – Relay characteristics and torque equation – Overcurrent, distance and differential protection – Protection of generators, transformers, feeders and busbars – Relay coordination and settings- Differential protection for converter interfaced DGs.													
Practical Component												12 Hours	
- Analysis of Characteristics of IDMT earth fault Relay. - Analysis of Transformer Protection using simulation & Experimental setup. - Analysis of Micro controller based over/under voltage relay. - Study and testing of Electromagnet type over current relay.													
CIRCUIT BREAKERS AND PROTECTION												7 Hours	
Protection against over voltages – Lightning and switching surges – Surge arresters – Insulation coordination – Earthing methods – Theory of arc interruption – Circuit breakers: Air circuit breaker, Vacuum & SF6 – Fuses – RRRV – Reclosers and isolators – Switching techniques- Digital substation concept - process bus (IEC 61850).													
Case study: Breaker catalog of various industries													
Practical Component												3 Hours	

Analysis of Circuit Breaker Performance During Fault Conditions using ETAP.

PRJ			SDG		7,9,12,13		
Pre-requisite courses	–	Data Book / Code book (If any)			–		

Course Objectives:	
The purpose of taking this course is to:	
1	Strengthen students' ability to apply electrical and electronics engineering concepts to real-world industrial projects and engineering challenges.
2	Develop competency in analyzing industrial processes, adopting modern engineering tools, and implementing effective technical solutions while adhering to safety standards and professional ethics.
3	Enhance technical, communication, teamwork, and project management skills through active participation in multidisciplinary industrial assignments and professional interactions.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Apply engineering knowledge, modern tools, and technical skills to execute industrial projects and solve real-world problems in Electrical and Electronics Engineering.	Ap
CO 2	Analyze industrial systems, operational practices, and engineering processes to identify opportunities for performance improvement and innovation.	Ap
CO 3	Evaluate the performance, reliability, and efficiency of electrical equipment, control systems, or industrial processes using appropriate engineering methods.	E
CO 4	Prepare comprehensive technical reports, project documentation, and deliver effective presentations demonstrating professional communication skills.	An
CO 5	Demonstrate leadership, teamwork, ethical responsibility, adaptability, and professional conduct while contributing to multidisciplinary industrial projects.	Ap

Pre-requisite courses	Power Electronics & Electrical Machines	Data Book / Code book (If any)	NA/calculator allowed for exams
-----------------------	---	--------------------------------	---------------------------------

Course Objectives:	
The purpose of taking this course is :	
1	To electric drives and Types of loads
2	To analyse converter-fed DC and AC drives
3	To study control techniques of induction and synchronous motor drives
4	To explore special machines and modern drive applications
5	To develop simulation and experimental skills in electrical drives

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain the fundamentals and dynamics of electric drives	K3
CO 2	Analyze and design DC motor drives using power electronic converters	K3
CO 3	Analyze control strategies for induction motor drives and synchronous drive	K4
CO 4	Compare and apply special electrical machines in drive systems	K3
CO 5	Apply electrical drives in real-world industrial and transportation systems	K3
CO 6	Design and implement laboratory experiments to simulate and analyze the performance of power converters and motor drives.	K4

Pre-requisite courses	Electrical Machines & Power Electronics	Data Book / Code book (If any)	NIL
-----------------------	---	--------------------------------	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Understand EV Fundamentals and Ecosystem
2	Analyze Vehicle Dynamics and Energy Consumption
3	Develop Knowledge of Electric Propulsion Systems
4	Explore Energy Storage and Battery Management
5	Identify and analyze key components in chargers, BMS, smart meters, and grid interfaces

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Apply the basic principles of electric vehicle components and compare them with internal combustion engines and other power sources.	Ap
CO 2	Analyze vehicle dynamics, resistance factors, and subsystems to evaluate performance and efficiency of EV powertrains.	An
CO 3	Evaluate different electric motor drive technologies and power converter control strategies to recommend the most efficient propulsion systems for EVs.	An
CO 4	Compare and assess different battery chemistries, BMS strategies, and regenerative braking for efficient energy storage.	An
CO 5	Illustrate integrated vehicle-to-grid systems incorporating charging standards and components to enhance the interaction between electric vehicles and utility grids.	Ap

Course Content	
INTRODUCTION TO ELECTRIC VEHICLES AND MOBILITY ECOSYSTEM Evolution of EVs ,EV scenario in India, EV Architecture and Types - BEV, HEV, PHEV, FCEV, Components of EV, Comparison of EVs- ICE vs EV vs Hybrid vs Solar EV, Emerging trends - Shared mobility and Fleet Electrification, Autonomous EVs, Connected EVs - Introduction to EV communication protocols -Overview of EV standards Practical Component: - Modeling and Simulation of Electric Vehicle Architecture using MATLAB/Simulink - Case Study Analysis of Electric Vehicle System Architecture (Tata Nexon EV / Ather 450) - Study and Demonstration of CAN Communication in Electric Vehicles (Simulation-Based)	9 Hours 9 Hours
VEHICLE DYNAMICS AND SUBSYSTEMS Vehicle resistance -Rolling resistance, Aerodynamic drag, Grading resistance, Acceleration resistance, Tractive effort, Wheel torque, Dynamic Equations, Drive cycle analysis (UDDS, WLTP, Indian Drive Cycle), Energy consumption modelling of EVs , Electric Vehicle subsystems and Power train components, Regenerative braking dynamics (mathematical modeling) Practical Component: - Simulation-Based Estimation of Electric Vehicle Driving Range using MATLAB - Study and Analysis of Vehicle Dynamics and Energy Consumption in Electric Vehicles under Different Driving Conditions	9 Hours 3 Hours
	9 Hours

ELECTRIC PROPULSION SYSTEMS Electric motor drive technologies for Electric Vehicles – Permanent Magnet Synchronous Motors (PMSM), Switched Reluctance Motors (SRM), Brushless DC Motors (BLDC), Induction Motors (IM), Overview of Power Converters and its control Strategies, Multi-motor and all-wheel-drive propulsion, High-efficiency and wide-bandgap (SiC/GaN) motor technologies. Practical Component: - Efficiency analysis using Eddy current load set up for Electric Motors - Speed and Torque Control of PMSM for Electric Vehicle Applications		6 Hours
ENERGY STORAGE SOLUTIONS Electric Vehicle Batteries-Lead Acid, Lithium ion-Lithium Iron Phosphate (LFP), Nickel Manganese Cobalt (NMC), Nickel Cobalt Aluminium (NCA) Solid-State Batteries, Comparison of Battery parameters, Battery Management System - Battery monitoring, SOC estimation, SOH and Remaining Useful Life (RUL), Cell balancing Regenerative Braking and Energy Recovery Practical Component: - Modeling of Electric Vehicle Battery and State of Charge (SOC) Estimation using MATLAB/Simulink - Design and Analysis of Electric Vehicle Battery Pack Configuration		9 Hours 6 Hours
VEHICLE TO GRID AND SMART INTEGRATION TECHNOLOGIES Integration of Electric vehicle with electric utility systems - Electric vehicle charging infrastructure-Types, Components and Selection, Charging Standards, Bidirectional charger, Integration with renewable energy sources, Case Studies: Electric Bicycle, Electric Bike, Electric Car. Practical Component: - Simulation of Electric Vehicle Charging Load and Its Impact on Power System - Modeling and Analysis of Vehicle-to-Grid (V2G) Operation for Electric Vehicles - Case Study Analysis of Electric Vehicle Charging Infrastructure in India		9 Hours 6 Hours

Theory Hours:45	Tutorial Hours:	Practical Hours:30	Project Hours:	Total Hours:75

Course Content	
CMOS TECHNOLOGY AND LOGIC DESIGN	10 Hours

Introduction to VLSI design, Moore's law, VLSI design flow, IC fabrication process (oxidation, diffusion, lithography), CMOS technology, MOS transistor operation, CMOS inverter characteristics, noise margins, power dissipation, stick diagrams, layout design rules Practical Component: • Introduction to EDA tools (Cadence / Tanner / LTSPICE/ Microwind) • CMOS inverter design and simulation • Layout design of inverter and NAND/NOR gates • Verification of layout using DRC and LVS Self-study Scaling issues and short-channel effects	10 Hours 2 Hours
COMBINATIONAL AND SEQUENTIAL CIRCUITS DESIGN Static CMOS, pseudo-NMOS logic, pass transistor logic, transmission gate logic, dynamic CMOS logic, clocked CMOS logic, combinational circuits: basic gates, adder, multiplier, sequential circuits: Static and dynamic flip-flops, registers, timing issues: setup, hold, clock skew. Practical Component: • Design and simulation of combinational circuits • Implementation of adder circuits • Design of flip-flops using CMOS • Timing analysis of sequential circuits Self-study Low-power circuit design techniques	10 Hours 10 Hours 2 Hours
HDL-BASED DESIGN AND VLSI SYSTEM IMPLEMENTATION Hardware Description Languages (Verilog/VHDL), behavioral and structural modeling, RTL design, synthesis, FPGA-based design, testing and verification, introduction to ASIC design, performance metrics: area, power, delay optimization Practical Component: • Introduction to Verilog/VHDL programming • Design of combinational circuits using HDL • Sequential circuit implementation using HDL • FPGA implementation (simulation and synthesis) • Mini Project: VLSI system design (ALU / counter / controller) Self-study System-on-Chip (SoC) and emerging trends	10 Hours 10 Hours 1 Hour

Course Content	
INTRODUCTION TO ENERGY STORAGE Energy scenario and need for energy storage, Classification of energy storage systems (mechanical, electrical, electrochemical, thermal), Comparison of energy storage technologies, Performance parameters: Energy density, power density, efficiency, lifecycle, cost analysis - Role in modern power systems - Indian context: PLI - ACC scheme. Case study : NITI Aayog Energy Storage Mission, Indian Green Hydrogen Mission overview.	9 Hours
ELECTROCHEMICAL ENERGY STORAGE Battery fundamentals, construction and operation of batteries: Lead-acid, Lithium-ion, Nickel- Cd batteries, Sodium-Sulphur battery, Solid-state battery, Flow batteries, Battery charging/discharging characteristics, State of charge (SOC), state of health (SOH)- IEC 62619 safety standard- Battery recycling Technologies. Case study : Thermal runaway and Li-ion safety risk	9 Hours
ELECTRICAL ENERGY STORAGE Supercapacitors: working, characteristics, applications - Superconducting Magnetic Energy Storage (SMES) - Fuel Cell - Hydrogen storage - comparison of electrical storage technologies - Hybrid Energy storage systems - Active cell balancing topology. Case study : Hybrid ESS for EV acceleration cycle	9 Hours
THERMAL AND MECHANICAL ENERGY STORAGE Pumped hydro storage systems - compressed air energy storage (CAES) - Flywheel energy storage systems - thermal energy storage: phase change materials (PCM) - thermochemical storage - comparison of thermal and mechanical energy storage Case study : India pumped-Hydro Storage Plant (PSP)- Kadamparai PSP	9 Hours
APPLICATIONS AND GRID INTEGRATION Energy storage in renewable energy systems (solar, wind) - electric vehicles and charging infrastructure - microgrids - smart grid integration - economic and environmental aspects of energy storage - BESS connection codes: IEEE 2030.2, IEEE 2030.3 standards for grid integration. Case study : Hybrid Battery Energy Storage and PV system	9 Hours

Course Content	
AUTOMOTIVE ELECTRICAL AND ELECTRONICS SYSTEMS Evolution of automotive electronics - Automotive electrical and electronic systems - Construction and working: Starting system - Charging system - Onboard charger (OBC) - Ignition system - Electrical power distribution in vehicles- Multiplexed wiring and domain architecture - switching and lighting system - Indian context - AIS-038 Rev.2, PLI Auto scheme. Case Study: Powertrain comparison of various automotives in India	9 Hours
AUTOMOTIVE SENSORS AND ACTUATORS Types of sensors: Temperature, Piezoresistive pressure, position, speed, oxygen sensors, MEMS sensor: MEMS accelerometer- MEMS gyroscope - Automotive Radar, LIDAR - Actuators: Motors, solenoids, relays - Actuator control methods. Case Study: Pressure measurement using piezoresistive sensor for ABS	9 Hours
ELECTRONIC CONTROL UNITS AND VEHICLE NETWORKS Electronic Control Units (ECUs): Architecture and functions - Microcontrollers and embedded systems in vehicles - Communication protocols in embedded systems: SPI, I2C, USB - Automotive communication networks: Introduction to CAN, CAN FD, LIN, FLEXRAY, MOST, KWP2000 and Automotive Ethernet - Unified Diagnostic Services (UDS) - On-Board Diagnostics (OBD-II) - AUTOSAR basics. Case Study: Comparison of CAN, CAN FD, OBD II.	9 Hours
AUTOMOTIVE CONTROL SYSTEMS AND SAFETY Engine control systems and fuel injection - Transmission control systems - Power train and Chassis subsystem – Cruise control - Brake control systems: ABS, EBD - Safety systems: Airbags, collision detection - Functional safety standards: ASIL, ISO 26262, AIS-156. Case Study: ASIL A/B/C/D classification and Hazard Analysis and Risk Assessment (HARA)	9 Hours
ADVANCED AUTOMOTIVE ELECTRONICS AND FUTURE TRENDS Advanced Driver Assistance Systems (ADAS) - Infotainment and human-machine interface (HMI) - Electric and hybrid vehicle electronics - Autonomous vehicle electronics overview - Cybersecurity in automotive systems: ISO21434 and TARA - Future trends: Over the Air (OTA) software update, Connected cars, AI in vehicles, Introduction to Digital Twin Technology in Automotive design and diagnostics Case Study: Demo based case study for ADAS and driver safety	9 Hours

	DISTRIBUTED ENERGY RESOURCES AND MICRO GRID	L	T	P	J	C
		2	0	2	0	3
PE		SDG		7, 13		

Pre-requisite courses	- Power Systems - Power Electronics - Renewable Energy Systems	Data Book / Code book (If any)	NIL
------------------------------	--	---	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Understand distributed energy resources (DER) and microgrid concepts.
2	Analyze operation and control of microgrids.
3	Design energy management strategies for DER integration.
4	Evaluate performance and reliability of microgrids.
5	Develop practical skills using simulation and hardware tools.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain DER technologies and microgrid architectures	U
CO 2	Analyze operation and control of microgrids	AN
CO 3	Design control strategies and energy management systems	C
CO 4	Evaluate integration of DER and storage systems	E
CO 5	Implement microgrid models using simulation tools	AP

Course Outcomes (CO)	Program Outcomes (PO) (Strong-3, Medium – 2, Weak-1)											Program Specific Outcomes (PSO)

5	3	3	3	3	3	3	3	2	1	2	3	3	3	3

Course Content	
MODULE 1: DER TECHNOLOGIES AND MICROGRID ARCHITECTURE Theory Introduction to Distributed Energy Resources (DER)	10 Hours

• Types of DER: Solar PV, Wind, Biomass, Fuel cells • Microgrid concept and classification (AC, DC, Hybrid) • Components of microgrid (generation, storage, loads) • Grid-connected and islanded modes of operation • Benefits and challenges of microgrids Self-Study (2 Hours) • Case study: Campus and rural microgrids • Policies and standards (MNRE, IEEE 1547) Practical • Modeling of solar PV system using MATLAB/Simulink • Wind energy system simulation • Microgrid architecture simulation (AC/DC microgrid) • Load flow analysis in microgrid • Study of DER characteristics	10 Hours
MODULE 2: CONTROL AND ENERGY MANAGEMENT OF MICROGRIDS Theory • Microgrid control hierarchy (Primary, Secondary, Tertiary) • Voltage and frequency control • Droop control methods • Energy Management System (EMS) • Load sharing and demand response • Communication protocols and smart grid integration Self-Study (2 Hours) • Smart grid technologies in microgrids • Case study: Smart microgrid implementation Practical • Simulation of droop control techniques • Frequency and voltage control experiments • Implementation of EMS using MATLAB/Simulink • Load sharing between multiple DER sources • Demand response simulation	10 Hours 10 Hours
MODULE 3: ENERGY STORAGE, PROTECTION AND APPLICATIONS Theory • Role of energy storage in microgrids • Battery and supercapacitor integration • Power electronic converters for DER • Microgrid protection schemes • Power quality issues and mitigation • Applications: EV integration, smart cities, rural electrification Self-Study (1 Hour) • Emerging technologies in microgrids (AI, IoT) • Case study: Resilient microgrids Practical • Battery storage modeling and simulation • Converter control for DER integration • Power quality analysis in microgrid • Fault analysis and protection schemes Mini project: Design of microgrid with DER and storage	10 Hours 10 Hours

	SMART GRID TECHNOLOGIES AND ARCHITECTURE	L	T	P	J	C
		3	0	0	0	3
PE		SDG		7,9,11		

Pre-requisite courses	- Power Systems - Power Electronics - Control Systems - Basics of Communication Systems	Data Book / Code book (If any)	NIL
-----------------------	--	--------------------------------	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Understand the concepts and evolution of smart grids.
2	Analyze smart grid architecture and key enabling technologies.
3	Study communication, control and automation in smart grids.
4	Evaluate integration of renewable energy and distributed resources.
5	Develop solutions for efficient, reliable and secure smart grid operation.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain smart grid concepts, architecture and components	U
CO 2	Analyze communication and control technologies in smart grids	AN
CO 3	Evaluate integration of renewable energy and DER in smart grids	E
CO 4	Analyze smart grid automation, protection and monitoring systems	AN
CO 5	Develop solutions for smart grid optimization and security	C

5	3	3	3	3	3	3	3	2	1	2	3	3	3	3

Course Content	
MODULE 1: INTRODUCTION TO SMART GRID AND ARCHITECTURE Theory Topics: • Evolution of conventional grid to smart grid • Definition, features and benefits of smart grid • Smart grid architecture (generation, transmission, distribution, consumer) • Smart grid components and stakeholders • Smart grid standards and frameworks (IEEE, IEC, NIST) • Challenges in smart grid implementation	9 Hours
MODULE 2: COMMUNICATION AND ICT IN SMART GRID Theory Topics: • Role of communication in smart grid • Communication technologies: Wired and wireless (PLC, ZigBee, Wi-Fi, 5G) • Smart grid communication protocols (IEC 61850, DNP3, Modbus) • Advanced Metering Infrastructure (AMI) • Supervisory Control and Data Acquisition (SCADA) systems • Cybersecurity in smart grids	9 Hours
MODULE 3: DISTRIBUTED ENERGY RESOURCES AND SMART GRID INTEGRATION Theory Topics: • Integration of renewable energy sources (solar, wind) • Distributed Energy Resources (DER) and microgrids • Energy storage systems in smart grids • Demand response and load management • Electric vehicle integration (V2G concept) Grid stability and power quality issues	9 Hours
MODULE 4: SMART GRID CONTROL, AUTOMATION AND PROTECTION Theory Topics: • Smart grid control strategies • Distribution automation systems • Fault detection, isolation and service restoration (FDIR) • Wide Area Monitoring Systems (WAMS) and PMUs • Smart grid protection schemes • Self-healing grid concepts	9 Hours
MODULE 5: SMART GRID APPLICATIONS AND FUTURE TRENDS Theory Topics: • Smart homes and smart cities • Energy management systems (EMS) • Artificial Intelligence and IoT in smart grids • Blockchain in energy trading • Smart grid economics and policies • Case studies of smart grid implementations	9 Hours

Course Content	
MODULE 1: ELECTRICAL SAFETY FUNDAMENTALS Basics of electrical safety, types of electrical hazards (shock, arc flash, arc blast), effects of electric current on human body, safety procedures, safety signs and symbols, personal protective equipment (PPE), safe working practices	9 Hours

Self-study Topics: Case studies of electrical accidents and lessons learned	
MODULE 2: PROTECTION AND SAFETY STANDARDS Earthing and grounding systems, protective devices (fuses, MCB, MCCB, relays), insulation and isolation techniques, safety regulations and standards (IEC, IS, OSHA), electrical installation safety, maintenance safety procedures Self-study Topics: Latest amendments in electrical safety standards	9 Hours
MODULE 3: ENERGY AUDIT FUNDAMENTALS Energy scenario and need for energy auditing, types of energy audits (preliminary, detailed), audit methodology, energy flow diagrams, energy balance, benchmarking and performance indicators Self-study Topics: Energy policies and regulations	9 Hours
MODULE 4: ENERGY AUDIT INSTRUMENTATION AND ANALYSIS Measurement instruments (power analyzer, clamp meter, lux meter, thermography), data collection and analysis, load monitoring, power quality analysis, identification of energy losses, efficiency evaluation Self-study Topics: Digital energy monitoring systems and IoT-based audits	9 Hours
MODULE 5: ENERGY CONSERVATION AND MANAGEMENT Energy conservation techniques in electrical systems, energy-efficient equipment (motors, lighting, HVAC), demand-side management, economic analysis (payback period, ROI), preparation of energy audit reports, case studies of industrial and commercial audits Self-study Topics: Green energy and sustainability practices	9 Hours

Course Content	
MODULE 1: FUNDAMENTALS OF ENERGY CONSERVATION	9 Hours
Theory Topics:	

• Introduction to energy conservation and efficiency • Global and national energy scenario • Principles of energy management • Energy conservation opportunities in electrical systems • Energy auditing basics • Role of Bureau of Energy Efficiency (BEE)	
MODULE 2: ENERGY EFFICIENCY IN ELECTRICAL SYSTEMS Theory Topics: • Energy-efficient electrical equipment • Efficiency improvement in motors and drives • Lighting systems: Conventional vs LED systems • Power factor improvement techniques • Energy savings in transformers and distribution systems • Demand-side management	9 Hours
MODULE 3: BUILDING ENERGY SYSTEMS AND ANALYSIS Theory Topics: • Energy consumption in buildings • HVAC systems and energy optimization • Lighting design for buildings • Building energy modeling and simulation • Load estimation and energy analysis • Smart building technologies	9 Hours
MODULE 4: GREEN BUILDING CONCEPTS AND RATING SYSTEMS Theory Topics: • Introduction to green buildings • Principles of sustainable building design • Materials and resources efficiency • Indoor environmental quality • Green building rating systems: LEED, GRIHA, IGBC • Net-zero energy buildings	9 Hours
MODULE 5: ENERGY CONSERVATION TECHNIQUES AND CASE STUDIES Theory Topics: • Energy conservation in industrial and commercial sectors • Renewable energy integration in buildings • Waste heat recovery systems • Economic analysis: Payback, life cycle cost • Case studies of green buildings and energy-efficient systems • Future trends: Smart cities and sustainable infrastructure	9 Hours

		3	0	0	0	3
PE		SDG		7,9		

Pre-requisite courses	- Electrical Machines - Power Systems - Electromagnetic Fields	Data Book / Code book (If any)	NIL
------------------------------	--	---------------------------------------	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Understand generation and measurement of high voltages.
2	Analyze breakdown mechanisms in insulating materials.
3	Study high voltage testing techniques and standards.
4	Evaluate insulation coordination and protection systems.
5	Develop knowledge of modern high voltage engineering applications

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain high voltage generation methods and measurement techniques	U
CO 2	Analyze breakdown mechanisms in gases, liquids and solids	AN
CO 3	Evaluate high voltage testing methods and standards	E
CO 4	Analyze insulation coordination and overvoltage protection	AN
CO 5	Apply high voltage engineering concepts to practical systems	AP

Course Content	
MODULE 1: GENERATION OF HIGH VOLTAGES	9 Hours

Theory Topics: • Introduction to high voltage engineering • Need for high voltage generation and applications • Generation of high AC voltages (transformers, cascade transformers) • Generation of high DC voltages (rectifiers, voltage multipliers) • Generation of impulse voltages (Marx generator) • Generation of impulse currents	
MODULE 2: MEASUREMENT OF HIGH VOLTAGES AND CURRENTS Theory Topics: • Measurement of high AC and DC voltages • Electrostatic voltmeters and sphere gaps • Measurement of impulse voltages and currents • Voltage dividers (resistive, capacitive) • Digital measurement techniques • Errors and calibration methods	9 Hours
MODULE 3: BREAKDOWN MECHANISMS IN INSULATING MEDIA Theory Topics: • Breakdown in gases: Townsend and streamer theories • Paschen's law and corona discharge • Breakdown in liquids: Mechanisms and factors affecting breakdown • Breakdown in solid dielectrics • Partial discharge and insulation failure • Insulation materials and properties	9 Hours
MODULE 4: HIGH VOLTAGE TESTING AND INSULATION COORDINATION Theory Topics: • Testing of electrical equipment: Transformers, cables, switchgear • High voltage testing methods: AC, DC and impulse testing • Non-destructive testing techniques • Insulation coordination principles • Overvoltage phenomena (switching and lightning surges) • Surge protection devices (lightning arresters)	9 Hours
MODULE 5: ADVANCED HIGH VOLTAGE ENGINEERING AND APPLICATIONS (Theory Topics: • High voltage transmission (HVDC systems) • Gas Insulated Substations (GIS) • High voltage cables and accessories • Electromagnetic interference and shielding • Digital monitoring and diagnostics of insulation • Case studies and recent advancements in HV engineering	9 Hours

Theory Hours:45	Tutorial Hours:	Practical Hours:	Project Hours:	Total Hours:45

	DIGITAL PROTECTION OF POWER SYSTEM	L	T	P	J	C
		3	0	0	0	3
PE		SDG		7		

Pre-requisite courses	- Power System Analysis - Electrical Machines - Control Systems - Basic Programming (C/MATLAB)	Data Book / Code book (If any)	NIL
------------------------------	---	---------------------------------------	------------

Course Objectives:	
The purpose of taking this course is to:	
1	Understand principles of power system protection and need for digital relaying.
2	Analyze digital signal processing techniques used in protection.
3	Study design and operation of numerical relays.
4	Evaluate protection schemes using digital techniques.
5	Develop skills in simulation and implementation of digital protection algorithms.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain fundamentals of digital protection and relaying	U
CO 2	Analyze signal processing techniques for protection	AN
CO 3	Design digital protection algorithms for power systems	C
CO 4	Evaluate performance of numerical relays and protection schemes	E
CO 5	Apply simulation tools for digital protection implementation	AP

5	3	3	3	3	3	3	3	2	1	2	3	3	3	3

Course Content	
MODULE 1: FUNDAMENTALS OF POWER SYSTEM PROTECTION Theory Topics: • Introduction to power system protection • Objectives and requirements of protection schemes • Types of faults and abnormal conditions • Conventional relays: Electromechanical and static relays • Limitations of conventional protection and need for digital protection • Introduction to numerical relays	9 Hours
MODULE 2: SIGNAL PROCESSING FOR DIGITAL PROTECTION Theory Topics: • Basics of signal sampling and quantization • Analog to Digital Conversion (ADC) • Filtering techniques (analog and digital filters) • Discrete Fourier Transform (DFT) and Fast Fourier Transform (FFT) • Extraction of fundamental components • Removal of DC offset and harmonics	9 Hours
MODULE 3: DIGITAL RELAYING PRINCIPLES Theory Topics: • Architecture of digital relays • Microprocessor-based relay design • Overcurrent protection using digital relays • Distance protection using digital relays • Differential protection principles • Relay coordination using digital methods	9 Hours
MODULE 4: PROTECTION OF POWER SYSTEM COMPONENTS Theory Topics: • Digital protection of transmission lines • Protection of transformers • Protection of generators • Busbar protection schemes • Adaptive protection techniques • Wide Area Monitoring and Protection	9 Hours
MODULE 5: ADVANCED DIGITAL PROTECTION AND APPLICATIONS Theory Topics: • Communication-based protection (IEC 61850) • Smart grid protection schemes • AI and machine learning in protection • Real-time implementation and hardware-in-loop simulation • Cybersecurity issues in digital relays • Case studies of modern protection systems	9 Hours

PE		SDG			7, 9	

Pre-requisite courses	- Power Electronics - Electrical Machines - Control Systems	Data Book / Code book (If any)	NIL
------------------------------	---	---------------------------------------	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Understand advanced DC-DC and DC-AC converter topologies.
2	Analyze operation and control of modern power converters.
3	Study high-frequency switching and soft-switching techniques.
4	Evaluate converter performance in renewable and EV applications.
5	Develop practical skills in simulation and hardware implementation.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain advanced power converter topologies	U
CO 2	Analyze operation and performance of converters	AN
CO 3	Design control strategies for power converters	C

5	3	3	3	3	3	3	3	2	1	2	3	3	3	3

Course Content	
MODULE 1: EV FUNDAMENTALS AND ARCHITECTURE Theory Topics: - Types of EVs: BEV, HEV, PHEV, FCEV - EV powertrain architecture - Energy storage systems: Batteries (Li-ion, Solid-state), supercapacitors - Battery characteristics and SOC estimation - EV standards: IEC, SAE, CHAdeMO, CCS	9 Hours
MODULE 2: EV CHARGING TECHNOLOGIES Theory Topics: - Charging levels: Level 1, Level 2, Level 3 (DC Fast Charging) - Conductive and inductive charging - On-board and off-board chargers - AC-DC and DC-DC converters for EV charging - Wireless charging principles	9 Hours
MODULE 3: EV CHARGING INFRASTRUCTURE Theory Topics: - EV charging station design and layout - Residential, commercial and public charging infrastructure - Charging station components and protection systems - Load estimation and site selection - Standards and policies for EV infrastructure deployment	9 Hours
MODULE 4: GRID INTEGRATION OF EVs Theory Topics: - Impact of EV charging on power system - Load profiles and demand forecasting - Harmonics and power quality issues - Distribution network constraints - Renewable energy integration with EV charging	9 Hours
MODULE 5: SMART CHARGING AND V2G SYSTEMS Theory Topics: - Smart charging strategies (Time-of-use, demand response) - Vehicle-to-Grid (V2G), V2H, V2V concepts - Communication protocols (OCPP, IEC 61850) - Energy management systems - AI and IoT in EV charging infrastructure	9 Hours

Pre-requisite courses	- Electrical Machines - Electromagnetic Fields - Numerical Methods - Basic programming (MATLAB/Python)	Data Book / Code book (If any)	NIL
-----------------------	---	--------------------------------	-----

Course Objectives:	
The purpose of taking this course is to:	
1	Understand principles of computer-aided design (CAD) for electrical machines.
2	Analyze electromagnetic field problems using numerical techniques.
3	Design electrical machines using modern simulation tools.
4	Evaluate machine performance through CAD tools.
5	Develop practical skills in modeling and optimization of machines.

Course Outcomes		
After successful completion of this course, the students shall be able to		Revised Bloom's Taxonomy Levels (RBT)
CO 1	Explain CAD concepts and numerical methods for machine design	U
CO 2	Analyze electromagnetic field problems using numerical techniques	AN
CO 3	Design electrical machines using CAD tools	C
CO 4	Evaluate machine performance using simulation tools	E
CO 5	Implement machine models using software tools	AP

Course Outcomes (CO)	Program Outcomes (PO) (Strong-3, Medium – 2, Weak-1)											Program Specific Outcomes (PSO)		
	1	2	3	4	5	6	7	8	9	10	11	PSO-1	PSO-2	PSO-3
Engineering Knowledge														
Problem Analysis														
Design/Development of Solutions														
Conduct Investigations of Complex Problems														
Engineering Tool Usage														
The Engineer and The World														
Ethics														
Individual and Collaborative Team work														
Communication														
Project Management and Finance														
Life-Long Learning														
1	3	2	-	-	-	-	1	-	-	-	1	3	2	-
2	3	3	2	3	3	-	1	-	-	-	1	3	3	-
3	3	3	3	2	3	2	2	-	1	2	1	3	3	2
4	3	3	2	3	3	2	2	1	1	2	2	3	3	2
5	3	3	3	3	3	3	2	2	1	2	3	3	3	3

- Case study: EV motor design Practical (10 Hours) - BLDC/PMSM modeling using CAD tools - Parametric analysis and optimization - Thermal analysis of machines - Multi-physics simulation Mini project: Design and optimization of electrical machine	10 Hours
--	-----------------

Theory Hours:30	Tutorial Hours:	Practical Hours:30	Project Hours:	Total Hours:60
----------------------------	----------------------------	-------------------------------	---------------------------	---------------------------

Learning Resources
Textbooks:
1. Salon, S.J., <i>Finite Element Analysis of Electrical Machines</i> , Springer. 2. Boldea, I., Nasar, S.A., <i>Electric Machines: Dynamics and Control</i> , CRC Press.
References:
1. Silvester, P.P., Ferrari, R.L., <i>Finite Elements for Electrical Engineers</i> 2. IEEE Transactions on Energy Conversion 3. ANSYS/COMSOL Documentation
Online Educational Resources:

Assessment (Theory course)
- Continuous Assessment Tests (CAT) – 20% - Lab Performance & Record – 20% - Mini Project / Activities – 20% - End Semester Examination (ESE) – 40%

Assessment (Embedded course)
SA, Activity and Learning Task(s)* , Mini project, MCQ, End Semester Examination (ESE) Lab Workbook, Experimental Cycle tests, viva-voce, etc...

Assessment (Practical course)
Lab Workbook, Experimental Cycle tests, viva-voce, etc...

Course Curated by		
Expert(s) from Industry	Expert(s) from Higher Education Institution	Internal Expert(s)
[Name, Organization]	[Name, Institution]	Dr. N. Prakash
Recommended by BoS on	XX/YY/2024	
Academic Council Approval	No.	Date XX/YY/2024
